On Anzac Day 25th April, Hunter WICEN will be providing communications assistance for the Newcastle Anzac Day Parade. Alan Hargreaves VK2KVF is coordinating this event, to provide the safety and communications net. Please contact Alan on (049) 52-5322 if you can assist.

Looking ahead, the annual Goulburn Conference is on the weekend of 15-16th May, and all WICEN personnel are invited to attend. Also on the same weekend is a Car Rally in the Central Coast area, and Dave VK2UDT is looking for volunteers.

A Disaster Management Course is on the weekend of 22nd-23rd May, for which Barry VK2AAB is taking applications.

WICEN is always looking for members to provide the community with communications assistance when required. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065; or come up on the regular Sydney WICEN net, on Thursday nights at 9.30pm on repeater 7150.

-- Dave VK2KFU, WICEN Publicity Officer

IPS WEEKLY REPORT

8 April - 15 April 1993

Issue no.: 16
Date of issue: 16 April 1993

Date 08 09 10 11 12 13 14 15
10cm 143 136 126 119 103 97 92 88
A 19 21 17 09 14 19 17 (23 est.)
T 97 80 103 85 97 84 53 46

Summary of activity

Solar activity was very low to low over the entire period.

The geomagnetic field at Learmonth (WA) was quiet to active on 8th April, quiet to minor storm levels on the 9th,

unsettled to active on the 10th. Conditions were quiet to unsettled on the 11th, quiet on the 12th, at active to minor storm levels on the 13th, unsettled on the 14th, and quiet to active on the 15th.

Ionospheric F2 critical frequencies at Sydney were near predicted levels on the 8th and 9th, enhanced by up to 30 per cent early on the 10th, then near normal again on the 11th and 12th. They were near normal on the 13th until dawn, when depressions of up to 30 per cent were observed through to the end of the period.

Strong spread F was observed at night on the 9th, and again during night on the 10th.

Forecast for the next week (16 - 22 April)

Solar: Low until the 19th, then low to moderate.

Geomagnetic: Unsettled to active on the 16th. Active to minor storm levels on the 17th and 18th. Quiet to unsettled thereafter.

Ionospheric: Frequencies depressed by 5-20 per cent on the 16th, depressed 10-30 per cent on the 18th and 19th. Near predicted monthly values otherwise.

CLUB NEWS

The New South Wales chapter of the ROYAL NAVAL AMATEUR RADIO SOCIETY will hold its monthly meeting at the home of Les VK2ALH, on Monday 19th April, starting at 10:30am. All members and interested parties are invited to attend. For details, please ring Casey on (02) 520-4424.
-- Casey VK2CWS

Members of the GLADESVILLE AMATEUR RADIO CLUB are reminded that their deferred Annual General Meeting will be held on Monday night, 19th April, at the usual venue.

The MID SOUTH COAST AMATEUR RADIO CLUB will hold its quarterly family gathering, barbeque, and meeting on Saturday, 1st May. The venue is the Hancock Ranch, Little Forest Road, Milton. Turn inland off the Prince's Highway 3 kms north of Milton and follow the "H" Ranch signs.

The lub provides barbeque facilities, tea, coffee, and afternoon tea. Why not bring the whole family?

-- Ben VK2AJE, Honorary Secretary

NEW RADIO CLUB

A new club for Amateur Radio and Electronics enthusiasts is being established in Parramatta, and will hold its first meeting on Friday, 7th May, at Amateur Radio House, 109 Wigram Street Parramatta. The meeting starts at 7pm, and a ver ywarm welcome is extended to everyone who cares to come along, whether they be current enthusiasts, or just interested in what the club has to offer.

The brain-child of the Wigram Street Amateur Radio Class of 1992, the new club will fill a real need in Parramatta and surrounding districts. It will provide an opportunity for Electronics and Amateur Radio enthusiasts to meet and share some of the more practical aspects of the hobby.

Come to the PARRAMATTA AMATEUR RADIO CLUB meeting on 7th May at 7pm, at 109 Wigram Street, Parramatta, and share your hobby with other enthusiasts.

-- Danny Brem VK2TAU

The CAIRNS AND TABLELANDS AMATEUR RADIO CLUBS advise us that their Far North Queensland Biennial Convention will take place this year, between the 24th and 26th September, at Trinity Beach, about 15 minutesdrive from Cairns. If you plan to be up that neck of the woods in late September, and

you'd like to attend the convention, you can write to the clubs at PO Box 1215, Cairns 4870.

BROADCAST ROSTER

Next Sunday morning: Ian VK2WR and Dave VK2KFU
Next Sunday evening: Bob VK2JHR and Peter VK2CZX

Don't forget you can meet the candidates for the next Divisional Council this Wednesday evening. The Divisional Office is open from 11am to 2pm, Monday to Friday, and 7 to 9pm Wednesday nights. The phone is answered from 12 noon to 1pm during the day, and you can leave a message on the answering machine outside these hours.

News highlights are also available on the divisional voice mailbox on (02) 552-5188, and you can leave a message afterwards if you wish.

Items for inclusion in this bulletin may be sent by mail to Post Office Box 1066, Parramatta 2124; by fax on (02) 633-1525, or by packet radio to "VK2WI at VK2RWI", to reach us by 7pm on the Friday prior to the broadcast.

Oh dear, that's not good. RTV contains acetic acid, that vinegar smell,
and it's very corrosive to copper. You shouldn't use that around electrical
wiring.

Gary

It should work fine, until you need the helmet to serve it's primary
purpose, at which point it is somewhat likely that your melon will burst.

:(

P.S. Did you know that you're not supposed to even put stickers or any
paint on a helmet? The resins used react unfavorably with many of these
compounds.

ARRL Bulletin 41 ARLB041
>From ARRL Headquarters
Newington CT April 13, 1993
To all radio amateurs

SB QST ARL ARLB041
ARLB041 Electronic filings

Electronic filings

The FCC on April 1 changed its rules to allow for the eventual
''electronic'' filing of license applications in the private radio
services. Currently all license applications must include a
handwritten signature. Last October Congress amended the
Communications Act of 1934 to allow electronic filing of
applications, applications signed ''in any manner or form, including
by electronic means, as the Commission may prescribe by regulation.''

Any changes to come will only be after the FCC has established
procedures for electronic filing; for now amateurs, and all others,
are still bound by the handwitten signature requirement.

Don't give up. Call the C.R.T.C. Find out when the next hearings will be held for the cable system's licence renewal. Intervene at the hearings. I suggest that between then and now, you complain frequently to the cable company about your service, in WRITING. Keep copies for yourself. After a few letters, complain to the CRTC about your service. Be persistent.

It would also probably be a good idea to make videotapes of the crappy reception, noting the date and time of each recording. Play them at the intervention.

Since the CRTC is the body that regulates the cable companies, and decides on their RATES, the cable company will bend over backwards not to offend the CRTC.

It has been a bad decision all around to allow cable companies to transmit signals on the same frequencies as over-the-air signals. The cable systems leak badly, and not always due to the cable company. Subscibers are notorious for making illegal and leaky extensions, etc. Or they leave an outside antenna connected to the TV AND add cable via a splitter, and voila! the whole neighbourhood gets interference to and from the cable.

To those in the US and elsewhere, please note that this post is in regards to Canadian cable regulations, as the poster was in Winnipeg.

YMMV

Bob.

Nonsense. The hole is near the edge of the helmet shell, and the same
size as the hole made in the shell by the manufacturer to mount the snaps
for the faceshield. You are vastly over-reacting.

> >I've had it this way for about five years, now.
>
> It should work fine, until you need the helmet to serve it's primary

Nonsense again. If a small hole at the perimeter of the helmet would
cause it to fail, why would the manufacturers use them?

>
> :(
>
> P.S. Did you know that you're not supposed to even put stickers or any

This is far more an urban myth than fact. While it's true some paints can
damage poly carbonate helmet shells, there's no evidence that I've ever
seen or read of that shows failure due to paint or decals. And fibreglas
helmets like the Bell Star won't be affected in any case.

One of the best CW learning programs for the IBM is SuperMorse.
Using it for a few weeks, I easily passed my 20. It is a very
good training tool, with lots of features. You can do any
word/character spacing you want. Look for SM316.ZIP at the
usual archive sites (like simtel20). -pat

1090. Shareware RTTY/Fax software--Frequently Asked Questions

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-17 18:33:52 UTC
From: moisan@silver.lcs.mit.edu
Message-ID: <1qpiigINN5np@life.ai.mit.edu>
Source record: 283062

Shareware RTTY/FAX Programs for the IBM PC
Frequently Asked Questions

by Dave Moisan, N1KGH

Version 1.0

Many people have gotten interested in receiving RTTY and FAX transmissions with their PC's. Shareware, combined with cheap, easy-to-build hardware, has put RTTY and FAX reception in reach of anyone with a good digital portable such as the Radio Shack DX440 or Sony 2010.

Two programs have become very popular: Hamcom 2.1, a RTTY terminal program, and JVFAX 5.1, a full-featured FAX/SSTV receive program. The two programs both use an identical basic interface, so one can get started in FAX and RTTY for almost nothing. Another program, PKTMON, lets you monitor HF and VHF packet off the air, using the same hardware.

This FAQ list is divided into five sections:

Introduction
Using Hamcomm
Using JVFAX
Using PKTMON
General Problems

Appendix--Hamcomm Interface Schematic and Parts List

INTRODUCTION

** Where do I get the software?

Hamcomm and JVFAX are available from a number of sources on the Internet, including simtel20.army.mil and nic.funet.fi (/pub/ham/misc); look for HAMCOM21.ZIP and JVFAX51.ZIP. PKTMON1.LZH (1.0) is also available from the above sources, and version 1.2 should be available soon.

** What are the basic system requirements?

Hamcomm and JVFAX are said to work on XT's. Pktmon requires a 12 Mhz 286 or better to run. Hamcomm hasn't any special memory or display requirements, but JVFAX works best with VGA and at least 1 M of memory; JVFAX has its own EMM driver.

** Where can I find plans for the basic interface?

The plans are included in the documentation for both Hamcom and
JVFAX. JVFAX has schematics for both the basic interface, and
a more sophisticated interface that also receives GOES/APT
satellite pictures.

A complete schematic and parts list is included at the end
of this FAQ list.

** I don't want to build it. Can I buy a interface?

Yes. William Nolle is selling his version of the interface,
called FAXCAP, for $30, and it includes all software discussed
here. Contact him at:

William Nolle
122 Phillips rd
Hazel Green,AL 35750

(Disclaimer: I am not affliated with William, nor am I even
a customer, but merely a friend and fellow enthusiast.)

** How does the interface work?

This is a zero-crossing detection circuit, made up of a 741
connected in an open-loop configuration. For every cycle of
the input signal, an interrupt is generated at the com port.
The software counts the interrupts, and calculates the frequency.

** How do I connect it to my radio?

Simply run an audio cable from the interface box to the earphone/
headset output, record output, or data output of your radio. The
Sangean 803A has a record output, and the DX440 can be modified for
same. Note that the interface needs 100 mV of audio to work,
but most rigs can easily supply this.

USING HAMCOMM

** How do I set up Hamcom?

There's a sample configuration file in the Hamcomm archive, HC.CFG
which explains the numerous parameters required for the program
to run. Here are the ones you should set:

select port com<n> (Select default com port, <n=1 to 4>)

Note: COM3 and COM4 are undefined, but here are the "define
port" statements for them:

define port com3 iobase 0x3e8 irq 4
define port com4 iobase 0x2e8 irq 3

You don't need this for COM1 or COM2 unless you have
an unusal setup.

set afcenter 1200 (Sets the default center frequency)

** Where can I find RTTY on HF and what does it sound like?

The ham bands are the best place to find decodable RTTY. I tune into CFH, Halifax, Nova Scotia on 4271, 6496.5 and 10536 KHz. RTTY is usually sent on the half-hour. RTTY has a "deedle-deedle" sound that you're probably familiar with if you've ever randomly tuned shortwave.

** How do I tune RTTY?

First, hit F9 for the tuning screen and, using the arrow keys, set the center frequency to 1200 Hz. For example, if you're trying to decode the ARRL bulletins on 3625 KHz, the tuning screen should look like this:

Signal Frequency: 01### Hz

0 . . . .500 . . . .1000 . . . .1500 . . . .2000 . . . .2500 Hz
Space -> | | <- Mark
|

Center Frequency: 01200 Hz

Using the arrow keys, move the lower tuning bar between the two upper tuning bars. You may need to vary your BFO, RIT or clarifier so that the upper bars are centered on the display.

The difference between the two frequencies, or "distance" between the two upper bars is the *shift* of the RTTY signal. Hit Alt-H and select the appropriate shift--in this example, 170 Hz.

You'll know when the signal's tuned properly, because a train of square waves will appear at the bottom of the screen.

Next, hit Alt-S and select the *speed*; Ham RTTY is usually 45 baud. Outside of the ham bands, 50 and 75 bauds are most common

(Note: If you're mathematically minded, you can figure out the speed yourself. Hit F8 to select the Scope and freeze the display by hitting Return. Measure the time interval of the _shortest_ peak, and calculate Baud rate = 1/t*10**-3, where t is in milliseconds.)

Now, hit F3 (for Baudot), and readable text should scroll forth on the screen. If it doesn't, hit Alt-K and select Inverted (Mark= low). If text is still unreadable, hit Alt-S and adjust the speed.

** How do I log RTTY to a file?

Hit Alt-F and select S (Start RX Logging); select the directory or file you want to save to and hit Return. To stop logging, hit Alt-F and select S (Stop RX Logging) again.

Here's some RTTY recorded off the air on 4271 Khz (at 0230 UTC):

avalon peninsula
east coast the bonavista peninsula only.
freezing rain warning continued for the bonavista peninsula only.
tonight..overcast. intermittent drizzle or freezing drizzle.
periods of freezing rainpm yrkwivonavista peninsula ending
overnight. winds becoming strong northerly. low zero.
friday..cloudy. patchy freezing g7+)-01vtov

** I found RTTY, but Hamcom can't decode it.

A sad fact of life in the shortwave bands is that at least 3/4's
of all RTTY is encrypted, and alas, much of the unencrypted
traffic is not sent in plain Baudot. There still are many
decodable signals, but you'll need good references to find them.

** How do I decode CW?

Decoding CW is similar to decoding RTTY, except that there's only
one frequency to be concerned with. While you hear the CW,
go to the decoding screen, as below:

Signal Frequency: 01200 Hz

0 . . . .500 . . . .1000 . . . .1500 . . . .2000 . . . .2500 Hz
|
|

Center Frequency: 01200 Hz

Just move the arrows so that the lower line is lined up with the
upper and hit F2.

Here's a sample of CW copied off the air, on 4281 Khz

vvv vvv vvv cqde vcs vcs vys qsx 4 6 and 8 mhz chnl 3/4/7/8 vvv
vvv vxv cq de vcs vcs vcs qsx 4 6 and 8 mhz chnl 3/4/7/8 vvv vvv
vvv cq de vcs vcs vcs qsx 4 6 and 8 mh7 chnl 3/4/7/-.--.. vvv
vvv vvv cq de vcs vc5 vcs qsx ......- 6 und 8 mhz chnl 3/4/7/8

Note that Hamcomm subsitutes dot-dash marks for any character it
can't decode.

** I'm hearing CW, but Hamcom just garbles it.

This is a common problem. Machine reception of CW is actually
much more difficult than decoding RTTY, as the decoder cannot
distinguish between space (no signal) and noise. If you've a
CW filter on your radio, it might help.

USING JVFAX

** How do I set up JVFAX?

Select "Configuration" from the menu, and you should see a Config screen. Options are set using the arrow keys to select, and the space bar, - or + to set each option. Here are the options you need to set:

Demodulator: Set to "7 bits" and "Comparator/IRQ 4" or "Comparator/IRQ 3". Specify the address according to the following table:

For:	Specify IRQ:	and Address:
COM1	4	03F8
COM2	3	02F8
COM3	4	03E8
COM4	3	02E8

Graphics and SSTV-Graph: Set this as appropriate for your system. Most users can specify "VGA (640x480)". Super VGA is supported, but you'll have to refer to your VGA manual to make the settings as JVFAX doesn't come with SVGA drivers.

Printer: Again, set this as appropriate for your system. Most popular dot matrix and laser printers are supported.
(As an example, for my Panasonic 1124, I selected "Epson 24-pin".)

Enable scrolling: This determines whether faxes will scroll down the screen when being received. Set this to "Yes".

Default Picture Directory: Enter the disk and directory where faxes will be stored, e.g. "C:\WEFAX".

Store Pictures in GIF 89a: JVFAX uses the GIF 89a standard to store special information on each fax, such as mode, LPM and IOC. Unless you're using other GIF software that can't handle this standard, leave this enabled ("Yes").

** Where do I find fax and what does it sound like?

A Fax signal will have a "scratchy wheel" sound when sending a picture, and a carrier tone when idle. It can be found easily in the maritime bands. Unlike RTTY, there are few variations, and none are encrypted.

Two stations I hear regularly on the US East Coast are NAM, Norfolk, VA on 3356, 8080 (irregular) and 10865 KHz, and CFH, Halifax, NS on 4271, 6496.5 and 10536. CFH sends faxes on the hour, generally. I've found press fax on 9244, from Buenos Aires, Argentina.

** What modes are faxes usually sent in?

Weather faxes are usually sent with an IOC (Index of Correlation--the ratio of width to height) of 576, and an LPM (Lines Per Minute) of 120. Press faxes, the few I have found, use an IOC of 288 and and an LPM of 60.

** OK, I'm hearing it. How do I tune in?

Using NAM, 10865 KHz as an example, follow these steps:

1) From the JVFAX main menu, hit F (Fax), and you'll be shown
a blank screen with a tuning indicator and a menu box on the
bottom of the screen.

2) Select the mode by hitting 1 ("Wefax 576").

3) Set the deviation to 400 by hitting the D key till it comes up.

4) Using your BFO, RIT or clarifier, tune the signal (in lower
sideband) until you see a peak on the tuning indicator. Tune
this peak towards the W (white) end of the scale (This will
normally be 1.9 Khz below the center frequency.) The indicator
should look like this:

```
! <- Signal
! peak
! should
. . . .. .. .. . . ##! be here
----------------------------------------
B W
```

5) Hit A (APT); it should read "Running" and you should start to
see a fax appear on the screen! To stop recieving, hit A
again.

** I don't get a fax, or I get something garbled.

Check the mode; most fax transmissions use "Wefax 576", mode 1
in the program. The LPM should be 120. Check your connections
to the interface. If that's in order, you may have an RFI or
interrupt problem (see questions in "General Problems").

** I get a fax, but it comes out slanted.

Hit / and a line will appear; use the arrow keys to tilt and
move the line so that it's lined up with a line on the fax
(such as a border or a chart line). Hit Return, and the fax
should now come in straight. Note that this is a permanent
adjustment, and you shouldn't need to fix this ever again,
no matter what faxes you subsequently receive.

** I get a fax, but it's not aligned with the edge of the screen.

Hit R (Rotate) and move a line with the arrow keys to the left
edge of the fax (there'll be a black bar where the fax is
supposed to start.) Hit Return and the fax should now be
properly aligned.

** My fax is negative!

You're receiving the fax on the wrong sideband; try the other
sideband. Most faxes will be sent in LSB. A few press stations

transmit negative pictures (JVFAX can be set to fix this; see
the docs.)

** My fax is too dark.
** My fax is too light.

Your receiver is mistuned. If the fax is too dark, tune towards
the white end of the tuning scale (peak moves towards W). If the
fax is too light (washed out), tune towards the black end of the
tuning scale (peak moves towards B).

Also, make sure the deviation is set correctly, at 400 for most
faxes. This is especially important for receiving the GOES
satellite images that NAM sends.

** How do I save a fax to disk?

While you're not receiving a fax (APT "waiting"), the S key will
toggle the save-file option on and off. Faxes will be saved in
.GIF format to the disk and subdirectory you specified in the
configuration screen.

** How do I print a fax?

Two ways:

1) While you're in the fax receive mode and not receiving a fax
(APT "waiting"), P will enable your printer; it's a toggle,
so hit P again to disable printing.

NOTE: You cannot have both Save to File and Print options
enabled at once. Also, once the fax is printing, the Rotate
command will not work on the printout.

2) Hit H (Show and Send Pictures). Select the fax you want to
print. When it appears on the screen, hit P. JVFAX will
ask how much width it will print in (0-100%); hit Return
for the default (100%).

** The GIFs I save are too big! How do I shrink them?

It's not uncommon for weather faxes to be very large, especially
if you regularly pick up 16-shade GOES images over NAM (a recent
GOES fax from them "weighed in" at 870k!)

There are several methods you can use to shrink the size of your
GIFs:

1) You can crop them. From the main menu select H (Show and Send
Pictures); from the directory listing, select the file you want
to crop. The fax will show up on the screen--select the Z (Zoom)
option. Use the arrow keys to move the zoom box (which is about
the size of a regular 640x480 VGA screen), and the X, Y, + and -
keys to resize it. Hit Return and the cropped image will
fill the screen. Hit S to save it (under a different name.)

2) You can reduce the resolution on faxes to be received.
Most faxes (of the Wefax 576 variety) have a resolution of 1810x
1000, which makes for beautiful printouts, but is overkill if
you're just using a GIF viewer.

To fix this, go into the Mode Editor (M from the main menu) and
select the mode you normally use (e.g. Wefax 576). Step through
the options with the arrow keys and select Resolution. For
Wefax 576, it'll normally be 1810. Enter a smaller value (800 is
OK) and hit Return.

If you're only interested in charts and not satellite images,
select the Grays option and set the number of shades to 2
(B&W only--no gray scale). Your GIFs should be much smaller,
though at a significant loss of resolution. (That being said,
I once saved some GOES images from NAM for a friend of mine
in 800x600x4 and they still looked good.)

** I get an all-white/all-black signal, no matter what signal is
present.

Either your audio cable to the interface is broken, or you have an
interrupt conflict between serial ports. If it's the latter
you may need to move the interface to another port.

USING PKTMON

Unlike Hamcomm and JVFAX, Pktmon is lesser-known, and much simpler in
scope. Using the same interface, Pktmon will decode HF and VHF
packet. Pktmon can log to a file, and will optionally keep track of
packets, assembling them into separate files for you. Note that the
program is receive-only.

While it will never approach, let alone replace, Baycom or a TNC, I've
been delighted with its very ingenious attempt at implementing AX.25
in software, and have found it a surprisingly fair performer. It even
comes with source code (Turbo Pascal) for implementing your own
projects with the interface!

There isn't much to running Pktmon, so here's a quick rundown through
the prompts.

"COM 1 or 2?" Self-explanatory.
Pktmon doesn't support COM3 or COM4.

"Packet type?" Enter 1 for HF packet or 2 or 3 for VHF packet.
I've never noticed a difference between the latter
two options in use.

"Log bad packets?" If you answer Y, packets with CRC errors will
printed, otherwise, not. I usually choose to
log them.

"File to log all packets"

Self-explanatory. If you don't specify a file,
packets will go on the screen.

"File to log sorted packets"

Enter a filename, _no extension_. Pktmon will
sort packets to the files <n:filename.#>, #=
0 to 9. It also creates a file <n:filename.OTH>
for uncategorized packets such as beacons.

That's it. Pktmon will start decoding packets until you hit Return.
There's a tuning indicator on the top of the screen that indicates
activity. Here are some sample unsorted packets copied off the air
on 14099 Khz around 2300:

Started Logging on 1993-04-16 at 18:00:11

[...]
82 total frames received and 6 good ones + 3 CRC errors
Stopped logging on 1993-04-16 at 18:20:42

It's rather like reading the news on an RS232 service monitor,
isn't it? :) Note that control characters are depicted as #cc.

Now, here are some sorted packets:

****** File open at 18:03:16 on 1993-04-16 for
WA2GGI-0 => K4YPE -0 traffic

**HI BOB IN BOCA RATON FL.BUSY NOW PLEASE LEAVE MESSAGE ON MAILBOX
TNX. [1 lost pkts] ,RM,S, or Help >
****** connection inactive for 5 minutes

****** File open at 18:13:28 on 1993-04-16
for KC4FS -0 => W1DXQ -0 traffic

Phone call Jack. Please wait...

****** connection inactive for 5 minutes

Now, the questions:

** Where do I find packet and what does it sound like?

On HF, packet can be found mainly at the lower end of 20 meters (14090-14150 usually) and in the 30 meter band (10100-10150 Khz). VHF packet can be found on 145.01, 145.03, 145.05, 145.07 and 145.09, among other places. It has a "braaaap..." sound quite unlike RTTY.

** How do you tune in packets on HF?

On the upper edge of the screen, there's an "A" scale. While hearing packets, tune VERY carefully until the scale reads 6 or higher. Pktmon expects a tone frequency of about 1000 Hz.

** I'm logging sorted packets, but they're missing linefeeds.

You'll have to go into your favorite ASCII word processor and have it insert linefeeds. I usually copy all the <n:filename.#> files into a single file and fix it there.

** I'm getting lots of CRC errors.

On HF, this is, sadly, normal. Packet is just not well suited to a ever-changing ionosphere, and it's marvelous that it works at all. (When I copied the sample text, the ionosphere was *very* quiet, an unusual occurence as I'm writing this.)

On VHF, on the other hand, CRC errors may be a result of Pktmon being unable to keep up with transmission. 1200 baud is near the limit for this type of interface. I've also found that with my setup (in an apartment), I seem to be prone to multipath and other VHF anomalies that disrupt reception, especially of packet.

** How do I know if my machine is too slow?

According to the author, Pawel Jalocha, a symptom of a too-slow system is that the program takes a long time to terminate when you hit Return. I've never had this happen to me, yet.

GENERAL PROBLEMS

** Can I use EMM386/QEMM or other memory managers with HC, JVFAX or PKTMON?

Generally, no. Hamcomm, JVFAX and PKTMON are interrupt-intensive and use up most of the CPU cycles. That's the price you pay for having the demodulation and decoding done in software (rather than in a TNC). JVFAX comes with its own memory manager, anyway.

If you regularly use EMM software (plus Windows or Desqview), make up a minimal boot disk disabling all such programs, before running Hamcomm, JVFAX or PKTMON.

** I get noise from my computer--HELP!

One of the most difficult problems in linking the PC with the radio is RFI. It's beyond the scope of this FAQ list to cover every possible contingency, but here are some suggestions:

1) The Hamcomm interface should be *shielded*--use a metal or foil-lined box. Use good shielded cable for both the audio and data connections.

2) Use RFI toroids (available at Radio Shack) on all cables.

3) Install 0.1 uF capacitors from all 3 RS-232 lines to ground.

4) Install an audio isolation transformer between Hamcomm and the radio. (Radio Shack #273-1374).

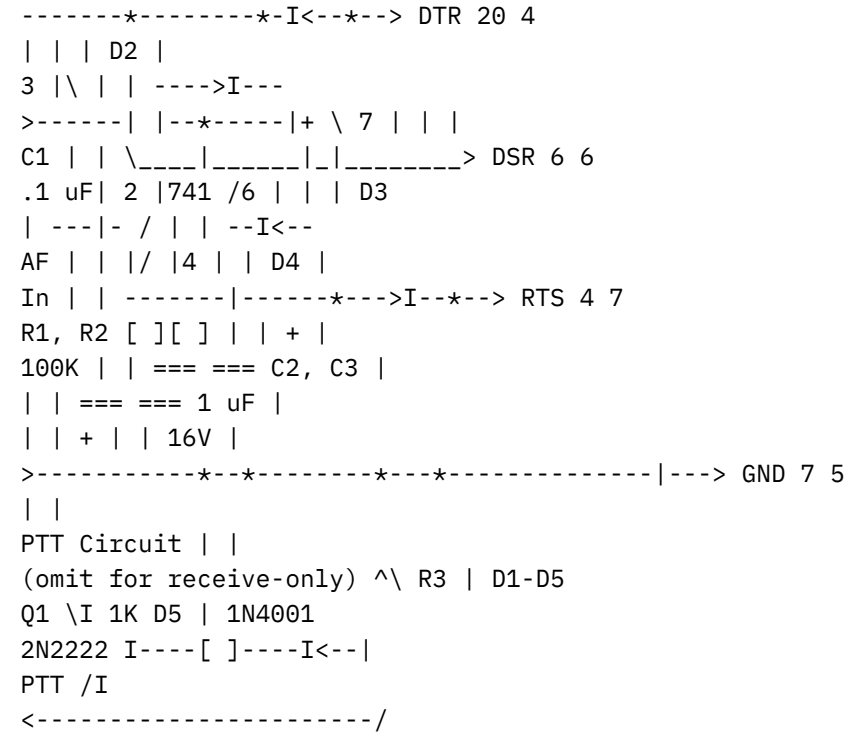
In my case, I had to do all of those steps. My 286 PC was feeding RFI back through the earphone jack of my radio (a RS DX400), *desensing* it (ouch!) I never got all the RFI out, but I reduced it considerably so that I only get a slight increase in background noise on a few frequencies.

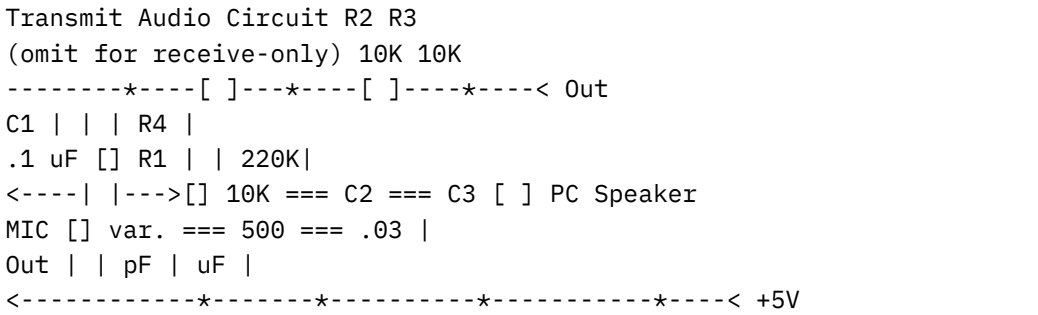
APPENDIX -- THE HAMCOMM INTERFACE SCHEMATIC

Here's a schematic of the Hamcomm interface, reproduced with permission:

HAMCOMM 2.0 Receive Circuit
Copyright (c) 1990, 1991 by W.F. Schroeder

RS232 25pin 9pin





If you're just interested in receive, omit the PTT and transmit audio circuitry.

Parts List -- Main Circuit

Part	Value	Radio Shack #
C1	0.1 uF	272-135
C2, C3	1 uF 16 V	272-1434
D1-D4	Diode, 1N914	276-1122
*D5	Diode, 1N914	276-1122
IC1	Op amp, 741	276-007
R1, R2	100K	271-045
*R3	1K	271-023
*Q1	Trans. 2N2222	276-2009

* Not needed for receive-only interface

Parts List -- Transmit Audio Filter

Part	Value	Radio Shack #
C1	.1 uF	272-135
C2	500 pF	272-125
C3	.03 uF	272-134
R1	10 K var.	271-282
R2, R3	10 K	271-034
R4	220 K	271-043

Miscellaneous:

Enclosure (RS #270-239 recommended), PC board (RS #276-170), audio jack, RFI toroids (RS #273-104), DB-9 connector, audio cable, plugs to match radio.

CLOSING COMMENTS

This FAQ list was the inspiration of myself and many others on the Fidonet SHORTWAVE echo, who have been using and experimenting with Hamcomm and JVFAX for over six months, trading ideas and hints along the way. When more people asked me for help, there and on the Internet, I thought of the obvious and wrote this! <g>

The following get credit for lending me a hand:

W.F. Schroeder (DL5YEC), Pawel Jalocha, Reid Kelly, John Palaima (N1NIG), William Nolle, Tom Carney (WB9RJX) and Stephen Lee.

Additions wanted
---

1) I'd like a list of "cornerstone" RTTY and FAX frequencies. In other words, if you're on the US West Coast, in Europe, Africa, the Mideast or Asia, what stations do *you* hear best? I'm not looking for the entire Klingenfuss, just a few good frequencies for various parts of the world.

2) I've learned of another fax program, HFFAX5 (no, it's NOT related to SSC's software as far as I can tell..) The doc files that come with it are of the "I got this neat program from a friend-of-a-friend" slant, and I'd like to find out its status (shareware, freeware or pirateware) before I write about it further. Nothing gets my goat like mysterious ZIP files with no documentation!

2A) And has anyone used FFTMORSE (Soundblaster CW) or TOR117 (AMTOR TU)?

3) I'd like to hear from anyone who's tinkering with the interface or even the Pktmon source.

4) Assuming I'm not flamed off the net, I do intend to update this list with the introduction of new shareware, updates to existing programs, or (most likely) stuff everyone else is using but that I never heard of. <g> (A new version of Hamcomm is slated for later this year, BTW.)

More questions?

If anyone has questions or comments or even flames, drop me a line at moisan@silver.lcs.mit.edu or at the address in the .sig. I'd appreciate it!

1092. MODS on a TH28A

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-17 20:00:07 UTC
From: dlarrimo@ducvax.auburn.edu
Message-ID: <1993Apr17.150007.1@ducvax.auburn.edu>
Source record: 283065

Hi!
I'm interested in finding the mods for my TH28A from someone.
In particular, I'd like to know the possibilities of being able to
transmit on 70cm, since it already receives it without any mods.
However, all other info. would also be needed.
Thanks!!

Dave

Discussion about earmics, radio compatibility and motorcycles
in progress:

>> So, what now? Does anyone else make an earmic?

You tried the Comet unit without success on your FT-530.

I just ordered an earmic from National Tower out of
the flyer they just sent to most ham's registered for
the Dayton Hamvention. Since I have both an FT-470
and an FT-530, I asked them when I ordered. They said
it would work, but I'll have to test it to be sure.

Cost of the earmic was US$59.95. This unit is not Comet.

Has anyone called Yaesu in CA. and asked if the mic
keying or wiring is different in the FT-530? I'm looking
at the HRO and AES catalogs, and they do not seem to
show different accessories are used for the FT-530
(except the batteries).

>would be welcomed also. 73's

I have some Mac software that currently runs as an MPW tool. I wrote it to
get my code speed up from about 8 to 20 wpm. It has the spacing control
you want, and "sends" random characters, numeric groups, and words from
a file (I use the Unix "words" file) intermixed in any proportion.

Let me know if you're interested. If there's sufficient interest, I'll put
a real Mac user interface on it so it doesn't have to be run as a tool.

These are prelaunch predicted elements for STS-55, provided by Robert Kliman
at JSC. STS-55 will also carry SAREX and should provide more opportunities
for contacts, especially packet. This flight there are two amateur radio
antennas, one in the flight deck window and one external antenna on the
spacelab module in the payload bay.

I have been putting NON-CONDUCTIVE heat sink paste in the fittings
and then taping the connector. After getting a duble layer of tape
on the fitting, I then smear RTV Silicone sealer over all. It's
not in contact with anything but the tape and these connections
will last a long time.

I use this method on the mountain tops where many of the connections
spend all winter burried in many feet of snow.

Just be sure to use the right heat sink paste. The milky white
stuff from RS is no good for this. (It might work at HF but I
wouldn't try it).

73s, Ron, KU7Y (now mobil at about 14.050 and 7.050)

SB DX @ ALLBBS $RTDX0416
VK2SG RTTY DX Notes, 16 April
VK2SG RTTY DX Notes for week ending 16 April 1993 (BID RTDX0416)

I like Don, CE3GDN'S opening connect line. "Thanks for 'listening'
before calling." Whatever happened to checking to see if the
frequency was clear before getting on and calling? If on Amtor or
Pactor, please listen first and if on RTTY QRZ or QRL the frequency.
A little kindness goes a long way.

Our information this week came from CE3GDN, DJ3IW and the Central
Europe DX-Cluster Node DB0SPC, I5FLN, IV3BKC, KA1NCN, KD2YG, WA1MPB,
W2JGR and the Twin-Cities DX Packet Cluster Network, W5KSI, and ZS5S.
Thank you all for your assistance.

Notes of Interest.

DXCC Status. The DXCC Desk has received some documentation for P5RS7 and has asked for further info from the operators and other sources. There will be no evaluation until this is received. Former Yugoslav Rep., Czech Rep., Slovak Rep. have been added to the DXCC Countries List and Czechoslovkia deleted.

Ghana, 9G1AA. JOE, ZS5S shared "some" information with me on a conversation he had with compatriot, PA3DEW, possibly confidential. Knowing I was putting out The Notes he said he had better hush up, Hi. Anyhow the door to Ghana is ajar and DXers, including RTTYers can be optimistic.

For next week's bulletin, please direct your Notes and Bandpass to Luciano, I5FLN @ 9X5LJ.#KGL.RWA.AF or I5FLN @ ZS5S.ZAF.AF

Remember, DX don't sleep.

Well, I need the mod for the Yaesu FT-530 portable.. I had it, but then
I tried to install DOS 6 and DoubleSpace, and, well, it wasn't pretty.
Anyhow, anyone who has the mods, please send it to me at one of the
following addresses:

Internet: n8usk@dreaml.wariat.org
Packet: n8usk @ n8jnr.#neoh.oh.usa.noam
ampr: n8usk@n8usk.ampr.org (this one might not work..)

Thanks, and 73!

Well there's RTV, then there's RTV. The stuff you find
at the hardware store, Dow Corning, GE, and others, *does*
release acetic acid. The sniff test is reliable. If it smells
like vinegar, don't use it. I wouldn't glob *conductive* material
into 9913 in any event. It's going to create a short. That's
why I use vacuum grease. It's non-conductive and non-corrosive.

>I've heard that RTV is used by TVRO companies to dielectrically

Yeah, the LOs of the IFR service monitors and spectrum analysers
use something akin to RTV, but it looks different than ordinary
RTV. I use hot glue, it works great. I've got one of those Black
and Decker gas powered hot glue guns, highly recomended.

>through the Great Lakes ARC VEC, at the Wheaton,Il hamfest.

Given the date of the exam, that was about 10 weeks ago. Check first with the people who gave you the exam, and see exactly when the paperwork was sent in to the FCC. They VE's have 10 days to send it in, so a delay was possible here.

If that was on time, I'd start asking around at the FCC. They may have simply hit a delay in processing your group's forms, or there may really be something wrong.

Remember that with their limited manpower, every phone call takes time away from processing 610's, but if you're concerned, the number is:

717-337-1212 (Gettysburg, PA, normal business hours EDT).

Rotsa ruck.

73, hope you get it soon, posted for all in similar situations to see,

Scott NF3I

According to an item in last month's QST, the FCC is now taking up to
90 days to process new license applications. The advice from the FCC
was to wait 120 days (including VEC time, mailing time, etc.) before
starting to worry.

How about starting a VAP program -- volunteer application processor? Sounds like they could use some help. (Easy for me to say, of course... I don't live near Gettysburg!)

Looking for an amateur radio operator that needs a variable power linear amplifier for 2-30MHz. Looks and works like new. Runs off 12v for mobile use. Input: 5-10 watts Output: ~175 watts AM, ~350 watts PEP SSB.
I need $150 out of it.

If that's too much, I also have a Tornado 100 that takes 5w in and 100/250w out for $100.

Reply with your callsign, address and phone number for verification of license.

Prices do NOT include shipping/packaging.

SB SAT @ AMSAT $ANS-107.01
STS-56/SAREX MISSIONS ENDS

HR AMSAT NEWS SERVICE BULLETIN 107.01 FROM AMSAT HQ
SILVER SPRING, MD APRIL 17, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-107.01

Shuttle Discovery With Its SAREX Payload Finishes A Successful Mission

With a Mission Elapsed Time (MET) of 9 days, 6 hours, and 21 minutes, the STS-56 SAREX mission concluded its successful mission with a landing at the Kennedy Space Center at 11:37:19 UTC. One of the major goals of the SAREX part of this mission was to hold classroom discussions with school children from all over the world. If fact, more than 18 schools were involved in these question and answer sessions with the shuttle astronauts. The school children were from countries that included the U.S., Portugal, Great Britian, Australia, and South Africa. Another SAREX first was the contact made between Mike Foale (KB5UAC) and Alexander Pollischuk (R2MIR) on the Mir space station. This historical 2M contact occurred on 11-APR-93 at 00:35 UTC when the orbits of Mir and the Shuttle Discovery came within 135 KM of each other. Unfortunately, during this mission, there were very few general 2M FM voice QSO contacts made on this particular SAREX mission. Because this was a science mission that involved a lot of biomedical and space science experiments, the astronauts were very busy with their "labor-intensive" activities. This left very little time for general voice contacts. However, for brief times, there were a few very vigorous QSOs especially when STS-56 passed over southern Texas. For those who were lucky enough to make a contact with one of the astronauts aboard STS-56 either by packet or by voice and would like to receive a QSL card, please send your QSL card to:

STS-56 QSL
c/o Vienna Wireless Society
P.O. Box 418
Vienna, VA 22183

Please include a self addressed stamped envelope. Non-US stations should include the appropriate number of IRCs with your QSL. Also, for those who were only able to copy the SAREX transmissions from space, you are invited to send in your QSL card to receive a card for SWL.

With the STS-55 SAREX mission close at hand, more opportunities to make a contact with a shuttle astronaut will be possible. For those who would like to see what the ground track of STS-55 will be, included below are the initial orbital elements for that mission:

STS-55 Elements Assuming A 24-APR-93 Launch

STS-55

ARSENE READY TO FLY 30-APR-93

HR AMSAT NEWS SERVICE BULLETIN 107.02 FROM AMSAT HQ
SILVER SPRING, MD APRIL 17, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-107.02

F6BVP Reports The Next OSCAR Is Awaiting Its Launch 30-APR-1993

The ARSENE satellite is now in Kourou, French Guiana space center of the European Space Agency. The team from the Space Radio Amateur Club, including Gerard Auvray (F6FAO) and Didier Delrieu (F6GXY), have joined 22 other engineers in performing the numerous verifications in the ARSENE launch vehcileintegration phase. Among the engineers are members of the European Propulsion Society, who constructed the MARS apogee motor; the team from the CNES (National Center for Space Studies) with Jean Pierre Redon, Chief of Project ARSENE; the team from Aerospatiale who contructed the vehicle; and the Italian teams from FIARE and CISE who fabricated the solar panels and cells.

The carbon-fiber rocket motor installed in ARSENE to help boost it its proper orbit on orbit #4 known as MARS, was placed under pressure after the x-ray photos showed no defects. The starter system for this apogee kick motor called MAGE, was installed. On 07-APR-93 the thermal covering was installed on the motor.

The battery went through several charge-discharge cycles so as to maintain optimal performance. The 6 solar panels have been tested and deliver nominal voltage. The umbilical cord between the satellite and the Ariane rocket has been checked. Thursday 08-APR-93 ARSENE's third-stage adapter was being spin-balanced.

The first tests of the radio amateur equipment have started.

The ASTRA-1C satellite and the Ariane rocket are in a nominal state for the launch set for 30-April-93. The launch window will open on Friday at 00:52 UTC and close at 01:50 UTC.

Alain Duchauchoy (F6BFH) has accepted the job of Video Project Chief for the launching of satellite ARSENE into orbit. Alain will coordinate the three sequences of 90 minutes of retransmissions on TV satellite ECS2-F1, transponder 39 at 11.658 GHz (KU band). These retransmissions are courtesy of France Telecom and will take place between 20:30 and 22:00 UTC on three different evenings beginning Friday, 30-APR-93. In addition, the ENSAE (the French National College of Aeronautics and Space) at Toulouse will operate an HF station with the special call of TM6SUP during the launch campaign and will report the status of the French radio amateur satellite ARSENE. More details are forthcoming in future reports.

For those who have yet to see a table of the transponder frequencies for ARSENE, the following table is presented for your information:

UPLINK FREQUENCY #1: 435.050 MHz
UPLINK FREQUENCY #2: 435.100 MHz <-----
UPLINK FREQUENCY #3: 435.150 MHz |
Mode S Combination (CW/SSB)
DOWNLINK FREQUENCY #1: 145.975 MHz |
DOWNLINK FREQUENCY #2: 2446.500 MHz <----

ARSENE WILL BE A PACKET RADIO "RELAY" SATELLITE. It will not have a bulletin board system (BBS) capability. All three uplink link frequencies will only accept AX.25 1200 baud FSK packet. However, when ARSENE is in Mode S, one can transmit on 435.100 MHz and listen to their downlink on 2446.500 MHz. During Mode S, one can use use this "analog" transponder for CW or SSB. The downlink passband on Mode S is 16 KHz wide.

[The AMSAT News Service would like to thank Bernard (F6BVP) with special help with the French-to-English translation done by N5KNX.]

AMSAT-UK SYMPOSIUM CALL FOR PAPERS

HR AMSAT NEWS SERVICE BULLETIN 107.03 FROM AMSAT HQ
SILVER SPRING, MD APRIL 17, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-107.03

AMSAT-UK Call For Papers To Be Presented At Space Symposium

AMSAT-UK will host its 8th Annual Colloquium from 29-JUL-93 through 01-AUG-93. Authors wishing to present papers should submit an abstract no later than 01-MAY-93 to be considered for inclusion in this year's proceedings.

Submissions should be sent to:

Doug Loughmiller (G0SYX, formerly KO5I)
Colloquium '93 Programme Chairman
Centre for Satellite Engineering Research
University of Surrey
Guildford, Surrey GU2 5XH England

Papers accepted for this year's proceedings will be required in final form (camera ready copy or on disk) by the Colloquium Programme Chairman no later than 15-JUN-93.

Authors will be notified of the acceptance of their papers by 15-MAY-93.

In other news from the University of Surrey (UoSAT), Doug Loughmiller (formerly KO5I and now G0SYX) wanted inform radio amateurs of UoSAT's participation in STS-56 SAREX mission with this brief note. He reports:

"With technical and operational support from a number of key UoSAT personnel including G1NBR, G8NOB, G7DQE and G0SYX, students from the Royal Grammar School of Guildford, England participated in a successful SAREX contact with Astronauts aboard the Space Shuttle Discovery during the STS-56 mission. The successful contact took place during orbit 18 of the mission. While in radio contact with Commander Ken Cameron (KB5AWP) students first uplinked a slow scan TV picture of themselves up to the orbiter and then asked a series of questions of the crew before losing radio contact with the vehicle a few minutes later. Approximately 20 students participated in the event while enthusiastic parents looked on. Frank Bell (G7CND) Deputy Head of Science at the Royal Grammar School organized the student's participation in the SAREX contact. He expressed his delight with the success of the contact by stating 'It was an image that I'm sure will remain with the boys for the rest of their lives.'"

AMSAT OPS NET SCHEDULE

HR AMSAT NEWS SERVICE BULLETIN 107.04 FROM AMSAT HQ
SILVER SPRING, MD APRIL 17, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-107.04

AMSAT Operations Net Schedule

AMSAT Operations Nets are planned for the following times. Mode B Nets are conducted on AO-13 on a downlink frequency of 145.950 MHz and Mode J/L on a downlink of 435.970 MHz.

Date UTC Mode Phs NCS Alt NCS

19-Apr-93 0130 B 95 WB6LLO WA5ZIB
24-Apr-93 1730 B 65 WA5ZIB WJ9F
02-May-93 0000 J 135 W9ODI N7NQM

Any stations with information on current events would be most welcome. Also, those interested in discussing technical issues or who have questions about any particular aspect of OSCAR statellite operations are encouraged to join the OPS Nets. In the unlikely event that either the Net Control Station (NCS) or the alternate do not call on frequency, any participant is invited to act as the NCS.

****

Slow Scan Television on AO-13

SSTV sessions will be held on Saturdays and Sundays UTC:

Mode J Downlink 435.980 MHz
Mode B after J Downlink 145.960 MHz

OPS NETS will take priority, look for SSTV activity immediately after the net. SSTVer's are invited to join the Net to make schedules at other times if desired.

SB SAT @ AMSAT $ANS-107.05
WEEKLY OSCAR STATUS REPORTS

HR AMSAT NEWS SERVICE BULLETIN 107.05 FROM AMSAT HQ
SILVER SPRING, MD APRIL 17, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-107.05

Weekly OSCAR Status Reports: 17-APR-93

AO-13: AMSAT-OSCAR-13 continues with the following transponder schedule. G3RUH reports that with the longer Mode-S periods, more new stations are showing up on Mode-S.

L QST *** AO-13 TRANSPONDER SCHEDULE *** 1993 Mar 22 - May 10
Mode-B : MA 0 to MA 90 !
Mode-BS : MA 90 to MA 120 !<- Mode-S Transponder;Mode-B Transponder is ON
Mode-S : MA 120 to MA 130 !<- Mode-S Transponder;Mode-B Transponder is OFF
Mode-LS : MA 130 to MA 135 !<- Mode-S Beacon + Mode-L Transponder
Mode-JL : MA 135 to MA 150 ! Blon/Blat 180/0
Mode-B : MA 150 to MA 256 ! Move S/C attitude to 210/0 on 10-May-93

Please don't uplink to the Mode-B transponder during MA 120-130. Your uplink transmissions will interfere with Mode-S users. Inorder to further encourage Mode-S enthusiasts and the use of the AO-13's Mode-S transponder, Mode-S is now ON for an additional 30 MA units, i.e. MA 90 to MA 135. During MA 90-120 you will have to endure the coupling from Mode-B users operating at 145.880-145.920 MHz. Either work between them, or use their signals as test signals. MA 120-130 is Mode-S transponder exclusive (plus the Mode-B beacon). MA 130-135 is Mode-S beacon (plus the Mode-L transponder).

[G3RUH/VK5AGR/DB2OS]

AO-16: Operating normally. [WH6I]

LO-19: Operating normally. [WH6I]

UO-22: Operating normally. Recent image file is up. [WH6I]

KO-23: Operating normally. There are currently 4 images. [WH6I]

RS-10: RS-10 is very active with stations from the West Coast working stations in eastern Canada. Look for the RS-10 Mode A beacon on a downlink frequency of 29.403 MHz. [VE4AMU]

RS-12: VE4AMU reports that many stations are generating a lot of excitement with this bird with its uplink on 15M and downlink on 10M. [VE4AMU]

MIR: VE4AMU reports that he hear the cosmonauts making a class room contact with school children last week. Look for voice and/or packet from the MIR space station on a downlink frequency of 145.550 MHz. [VE4AMU]

RS-15: Although there is no offical launch date for RS-15, it is expected to be launch sometime late this year. [Alexander Zaitzev (RW3DZ)]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

NEW AMSAT-NA LANDLINE BBS

HR AMSAT NEWS SERVICE BULLETIN 107.06 FROM AMSAT HQ
SILVER SPRING, MD APRIL 17, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-107.06

A New AMSAT-NA Landline BBS Dedicated To OSCAR Users Is Now In Service

To overcome problems radio amateurs have noted in receiving timely news, AMSAT this week appointed a new dial-in BBS which will carry all ANS bulletins, Keplerian elements, Space News and other news items associated with the amateur space program.

Sysop for the new BBS is Mel Roman (KA2UPD). Mel set up his BBS about 2 months ago, with a view to serving AMSAT, and has it working very well. It is presently on-line from noon-to-midnight weekdays EDT and from 9:00 AM EDT to midnight weekends. However, Mel has plans to have his BBS become operational 24 hours a day very soon.

Phone number for the new BBS is (201) 261-2780 and it accepts the usual 8-N-1 up to 2400 Baud.

Other BBSs which presently carry AMSAT information are expected to continue to do so.

[The AMSAT News Service (ANS) would like to thank Andy McAlister (WA5ZIB), VP of User Services for this bulletin item.]

1115. Re: How can I find my license?

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-18 22:22:56 UTC
From: ham@wam.umd.edu
Message-ID: <1993Apr18.222256.27864@wam.umd.edu>
Source record: 282987

As far as the FCC wait goes, the last I heard was that the delay on NEW licenses was around 6-8 weeks, with delays for upgrades going at about 10-12 weeks. The 90-120 day scare was a huge backlog that built up during the Christmas/New Year's rush. Supposedly, the problem was also due to a lack of manpower due to somebody being re-assigned at the FCC.

The last postings to this newsgroup listed delays of 6-8 weeks - if anyone has had a worse experience of late, PLEASE DO TELL...

Scott NF3I Good Luck

Recently, I acquired two Motorola Micor VHF Lowband mobiles, model number "T51RTN 1490B SP10", as well as two GE Master Pros, model number "MS64TFN33". They are currently operating in the 47 MHz range, being surplus from CalTrans communications. I am hoping to get them operating on six meters. I'm looking for service manuals for these radios, and also tips and/or ideas from anyone who has worked with these radios, particularly at six meters. If you have these manuals, please mail me! Thanks a lot and 73!

There will be times when the 1 Mhz difference will mean that CB is
open, but 10 meters is not, but basically it is a problem of
momentum....when 10 meters is dead for awhile, not that many hams
hang out there, so no one knows if it is open. People may tune across
the band and hear it is dead, but if no one is there calling CQ,
then it sounds dead when it is not.

>
>If 10m is open but the concentration is too low to find any other ops perhaps

Back when I join the Ten-Ten group as a young ham, they were actively
trying to promote use of ten meters when the solar activity was down.
They established 28.6 Mhz as a calling freq. I noticed that this was
popular for years, until the new Novice privileges were established,
with an allocation below this frequency.

1118. ALERT: Major Solar Flare Alert - 18 April

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-19 00:12:14 UTC
From: oler@rho.uleth.CA
Message-ID: <9304190012.AA16412@rho.uleth.ca>
Source record: 282988

/\

MAJOR SOLAR FLARE ALERT

ISSUED: 23:30 UT, 18 APRIL

/\

* NIL to Low Impact Possible *

MAJOR ENERGETIC EVENT SUMMARY:

(All times are valid for the UT day of 18 April)

Flare Size: Class M8.7/2N
Location: N19E55 (Region 7477)
Tenflare: 680 sfu at 1905 UT. Duration: 11 minutes.
SESC Times: Begin=18/1902 UT, Peak=18/1915 UT, End=18/1921 UT
(SESC Times are based on a half-power-point system)
Sweeps: Type II (Importance 3). Estimated shock velocity: 1000 km/sec.
Type IV (Importance 3).
Protons: None.

PRELIMINARY X-RAY TIME PROFILE DATA AND ESTIMATED STATISTICS:

BEGIN (XRAY)	MAX (XRAY)	END (XRAY)	DURATION	INTEG. FLUX	SWF DUR.
1903 (B5.9)	1915 (M8.7)	1949 (C9.4)	046 MIN.	0.083 J/m^2	040 min

NOTE: The xray time profile data above is not based on the half-power-point system, but is intended to give a general idea of the duration of the entire event, from the start to the end when xrays fall below M-class levels. Integrated x-ray flux covers the interval from start to end.

SYNOPSIS:

Region 7477 (N10E52) produced an unexpectedly energetic major class M8.7/2N tenflare from N10E55 at 19:15 UTC. This event was accompanied by major Type II and IV spectral radio sweeps and was associated with a moderate to strong SWF over the HF bands. An 680 sfu tenflare was observed during this event lasting 11 minutes. X-rays were typical for a flare this large.

Region 7477 is a relatively small, but growing, D-type spot group. Most of the activity appears to be originating from the trailer spot complex where the plage is brightest and flux-interaction is highest. The region did not appear to be particularly complex in visual or magnetic aspects prior to this event, although there may have been some restructuring of the fields prior to the flare. The group has been producing frequent subflare activity.

There is an outside chance this region might erupt with another major
flare over the next 72 hours, although the evidence is not presently
convincing enough to strongly support this. Most of the activity from this
group is expected to be in the form of smaller C-class subflares and possible
isolated minor M-class events.

POTENTIAL TERRESTRIAL IMPACT ASSESSMENT:

The following tables depict the preliminary estimated potential for
terrestrial impacts in various categories. These tables are valid only for
the flare described and do not include assessments for previous influential
flare events.

POTENTIAL MAGNITUDE OF DISTURBANCE

1119. How does "Differential Mode" GPS work???

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-19 00:14:49 UTC
From: thompson@cactus.org
Message-ID: <1993Apr19.001449.17255@cactus.org>
Source record: 282991
Cross-posted to: rec.radio.amateur.misc,rec.aviation,sci.electronics

I understand that the new GPS boxes now have an option known as "differential ready". Apparently land-based beacons tranmit GPS correction information to your GPS receiver (with differential option installed).

How does this system work? What frequency is used for the land-based beacons?

Thanks in advance,

Charlie Thompson
.

1120. Fact or Fiction???

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-19 00:21:06 UTC
From: bobm@anasazi.com
Message-ID: <1993Apr19.002106.23207@anasazi.com>
Source record: 283026

The following is part of a message posted to the Hang Gliding mailing list
about FAA/FCC enforcement. Is this actually possible? Should I be xmitting
with both my radios at once to fool the system?

------- start message --------

The FCC also enforces in earnest. They recently collected $60,000 in fines
from an unlicenced operator for broadcasting on the amateur radio
bands. The FCC is using a new device that records the exact location
of the transmitter and its "finger print". Apparantly each
transmitter has a unique electronic signature that is comparable
to a finger print. This signature has been accepted by the court
as positive idenfication.

So do yourself a favor: Fly and land legal and don't transmit
on the amateur bands without a license.

1121. WARNING: Potential Major Solar Flare Warning

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-19 00:24:33 UTC
From: oler@rho.uleth.CA
Message-ID: <9304190024.AA17307@rho.uleth.ca>
Source record: 282990

/\

POTENTIAL MAJOR SOLAR FLARE WARNING

ISSUED: 23:45 UT, 18 ARPIL

/\

PRIMARY CANDIDATE FOR HIGH SOLAR ACTIVITY : REGION 7477 (N10E52@00Z,19APR)

```
-------------------------------------------------------------------------
| ESTIMATED POTENTIAL MAGNITUDE OF ENERGETIC ACTIVITY OVER NEXT 7 DAYS |
|-----------------------------------------------------------------------|
| DAYS | C5.0 | M1.0 | M5.0 | X1.0 | X5.0 | >X12.0 |
|------|----------|----------|----------|----------|----------|------------|
|1(+) | 95 % | 50 % | 20 % | 10 % | 1 % | 0 % |
|3(+) G| 100 % | 60 % | 40 % | 15 % | 2 % | 0 % |
|5( ) G| 100 % | 70 % | 50 % | 20 % | 3 % | 1 % |
|7( ) G| 100 % | 75 % | 50 % | 20 % | 3 % | 1 % |
-------------------------------------------------------------------------
```

DAYS = Number of days (from present) into the future (1, 3, 5 and 7 days).
(+) = Primary candidate region expected to GROW and DEVELOP.
( ) = Primary candidate region expected to STABILIZE or remain STABLE.
(-) = Primary candidate region expected to DECAY and SIMPLIFY.
(x)P = Possible proton and/or PCA threat. (x) may be one of (+), (-), or ( ).
(x)G = If a favorable major flare develops, a moderate to high probability exists that the event may be geoeffective.
xx % = Probability of activity equalling or exceeding the given x-ray class sometime over the next number of DAYS.
WLT = Data not applicable due to the West Limb Transit of the target region.

The above chart should be used as a guide only. It represents anticipated levels of activity based on current projections of region development. Actual conditions may, of course, differ from these projections.

SYNOPSIS:

Region 7477 (N10E52) produced a major M8.7/2N tenflare at 19:15 UT on 18 April. The region does not (yet) appear to have a sufficiently substantial driving mechanism to support additional major flares, although the spot group has been admittedly close to the limb since it first appeared and has not been in a particularly favorable position to permit an in-depth analysis of its characteristics. Nevertheless, the trailer spot complex does contain a modest amount of complexity which might support additional major levels of activity if growth persists.

This warning will remain active until 25 April when it will be updated
or allowed to expire.

>just "Whitney," I believe the company is Roper-Whitney.

There are actually 2 companies, Whitney (name preceded by 2 initials
which I can't remember) and Roper Whitney. A friend of mine used
to work for the first of the two. Same founder, same technology
(both companies specialize in punching holes in metal); I think their
tooling even fits each other's presses.

Have you heard the interesting melodies the 742 can play? Put it
into all lock mod and press the PTT and other keys on the keypad. It plays
neet melodies. :-)

Later,

Jason

1124. Help with 742 and CTCSS unit.

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-19 01:33:04 UTC
From: jtrimble@undergrad.math.uwaterloo.ca
Message-ID: <C5plz4.H1n@undergrad.math.uwaterloo.ca>
Source record: 282994

I got the TSU-7 with my unit (not installed) and installed it into
the 742 with no problems. The only this is that it doesn't work. The
TSU7 itself is fine because I put it into my TH28A and it worked fine. The
thing is that when it's seated nicely into the 742 it does nothing. It's
likeit wasn't even in there.

Can anyone help me? Or shall I just take it back to Kenwood and
see ifthey can do anything with it?

Thanks,

jason

> become part of the proposal with tonight's tally.
Well, it is Sunday night, 4/18 and I'd sure like to see antennas as a
separate newsgroup...I may be able to wade through all the muck and
see what I want when this is over! ;^)

BTW, the arguments for and against the tech/instruction/beginner
groupings have some interesting points.

I would be upset if newcomers were "exiled" to an area where only
newcomers would go. That is NOT how to help elmer these folks into
Amateur Radio, and elmering is a fact of life and a means of our
survival, not just some nice tradition from long ago. In today's
environment, when a newcomer can gain an extra class (remember when you
had to be licensed for two years at Tech or higher before even sitting
for the exam? (not so long ago, either) well, today people need more
guidance because there is less hands on and building of "stuff") in a
few months and need know nothing of the traditions and actually
workings of rigs and equipment, the need for guidance and help is
nearly perpetual. If the creation of a newsgroup for newbies would
mean their exile, I will vote against it since flames aside, they'd be
better served in r.r.a.m

The Instruction group has merit, particularly for question pool
discussions, teaching methodologies, and the like and I'd like to see
that aspect with some focus (and hopefully no regular outbreaks of the
on-going code/no-code flamewars -- of which I am a too often willing
participant... :-{

And too many people have already said this, but most of the
discussions have some tech component, so let the specifics, like
antennas have a group and let the rest go until the next RFD for
r.r.a.tech.

Last, I support Gary and his thoughts on how discontinuous dxing and repeaters are, and how one could probably use a group (dx) and no slight intended, but the traffic about repeaters since 1/1/93 has been focused pretty heavily on who should own a repeaters and whether the repeater then owns the frequency...hardly good reason for a separate group.

> when I'm done counting.

1127. ANLI AT-4 vs "generic" car-mount antenna?

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-19 02:21:58 UTC
From: bjaspan@GZA.COM
Message-ID: <BJASPAN.93Apr18222214@suan-la-chow-show.GZA.COM>
Source record: 282996

Is there a significant difference between different vendors' 2/440
dual-band car-muont antennas? Specifically, I'm wondering if the
antenna the guy at HRO recommended (ANLI AT-4) is worth the price, or
if I should just buy any random dual-band antenna at the next
swapfest.

Thanks.

>at the hardware store, Dow Corning, GE, and others, *does*
>release acetic acid. The sniff test is reliable. If it smells
>like vinegar, don't use it. I wouldn't glob *conductive* material

I don't advise the sniff test--no telling how sensitive you
are to these chemicals, which is probably why they use acetic
acid in hardware store stuff. Dow Corning has a product called
3140 RTV coating that is specifically designed to be compatible
with copper. It warns that it forms trace amounts of methanol
when exposed to water. It also warns that overexposure may cause
drowsiness. Something to keep in mind if you are going to be
climbing a tower...

>into 9913 in any event. It's going to create a short. That's
>why I use vacuum grease. It's non-conductive and non-corrosive.

I used the conductive example to show that it was intended
for wiring. Hopefully I'm not overestimating the intelligence
of people on the Net :-).

Anyone have a simple way to determine whether a non-metal
will promote corrosion--without needing a degree in chemistry?

The reason the Mic will not work with the FT-530 is because of the differences
in wiring necessitated by the Yaesu remote control speaker mic for the 530.

Some of the contacts in the Mic connector on the 530 supply voltage to the
remote control mic, this generally screws up most other Speaker/Mics, which I
found out about as soon as I got my FT-530. I tried to use my old Icom mini
Speaker/Mic (HM-46) with the 530, and all I got was a dim red glow from the tx
light on the Mic.

I have tried the Icom HS-51 boom mic with the 530, and it seems to work fine.
I guess I would probably just recommend getting Yaesu's headset if you want to
work VOX with the 530.

Good Luck,

Around here I have an old National Semiconductor reference manual
that has specs for a series of buffer amplifiers listed in the index as:
LH0033 - Fast Buffer Amplifier
LH0063 - Damn Fast Buffer Amplifier
Kinda suprised me to see it officially called that even if it does have a
100MHz bandwidth and a 6000V/uS slew rate.

1132. Linked repeaters in California??

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-19 04:26:37 UTC
From: carndt@tuba.calpoly.edu
Message-ID: <1993Apr19.042637.167581@zeus.calpoly.edu>
Source record: 283000

I am compiling a list of open linked repeater systems in California.

Please Email any info you have on these, and I will post what results I receive. Linked systems can be anything from crossbanded repeaters at the same site, to large systems like Condor. Information can be anything from full system information, to an address or callsign to contact for more information.

Thanks!

DX Bulletin 19 ARLD019
>From ARRL Headquarters
Newington CT April 15, 1993
To all radio amateurs

SB DX ARL ARLD019
ARLD019 DX news

Thanks Bob, WB2CJL, Wayne, W8SEY, and the Western New York DX
Association for the items in this week's bulletin.

ETHIOPIA. Much activity has been reported from this one. ET3DX has
been on all bands, with plenty of modes, including rtty. QSL via
JH1AJT. Due to his work schedule, Sid, ET3SID, has been showing up
only on weekends operating RTTY. He has been doing a fantastic job
at supplying a new one to RTTY buffs.

NAURU. C21/VK2BEX started operations on Thursday morning and has
been worked on 20 meter RTTY. Check 14085 kHz QSX up 5 to 10 kHz
between 1200 and 1400z. QSL to his home call.

ERITREA. Frank, DJ9ZB, reports that his group will not go to
Eritrea in the immediate future. Their trip to Asmira will be
rescheduled as soon as the political climate improves.

CAYMAN ISLANDS. Lars, SM3AVQ, will be on the Grand Cayman Island
through April 19. This is to be a relaxation vacation, however Lars
will be on the air during the SARTAG WW Contest April 17 and 18.
QSL to his home call.

MELLISH REEF. DXpedition leader VK4CRR continues his plans for a
September trip to the reef. He is looking for more operators. If
interested, contact Guy, ON4ACG, for more details.

PETER ONE ISLAND. The same international team of ten operators that
recently activated VP8SSI are planning a 16 day operation slated to
start on February 1, 1994. For more information on this all-mode
operation, contact AA6BB or KA7V.

1137. TH78 Cloning

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-19 07:56:06 UTC
From: pdu@unixa.nerc-barry.ac.UK
Message-ID: <28105.9304190756@ua.nrb.ac.uk>
Source record: 283002

I read a posting about a week ago that said you could set a TH-78A
into cloning mode by holding down the 0 key while turning it on.
I tried this with my TH-78E, as well as holding down the O (Alpha)
key while turning it on. I couldn't make it go into clone mode.
Anyone got any ideas of how the European model does cloning?

Thanks in Advance,

Paul GW7KES

To celebrate Festival International de Louisiane, the Acadiana
Amateur Radio Association will be operating a special event station.
Operation will be from 7:00 am (CDT) to 8:00 pm (CDT) both April
24th and 25th, in the lower general class, voice portions of
40, 20 and 15 meters, and the novice voice band on 10 meters.
All persons are invited to participate in this special event station
to receive a handsome commemorative QSL.

Contact me for more info!

I think I'd be somewhat perturbed about this myself!

I think that "no-code" hams are not intrinsically different from
"coded" hams. Besides, if you decide not to talk to no-codes, YOU are the
one who's missing out.

I'm looking for the 1980 or 1981 issue of either Radio
Electronics or Popular Electronics which detailed how
to construct a VLF Receiver.

The VLF Receiver uses a CA3028A IC and Rad Shak xformers
for the various stages.

I can't seem to find these magazines at the libraries
around here.

Any information would be appreciated.

Bob : try supermorse for IBM pc. Latest version seems to be sm316
Look for sm316.zip at an ftp site like wuarchive.wustl.edu
directory is mirrors/msdos/hamradio
I have no connection except that I bought (it's shareware) the
previous version and found it to be excellent. I have even used
it to operate my rig as a keyboard.
It does use Fharnsworth method although I don't remember if you
can change the character speed.

>rec.radio.amateur.antenna discussion of amateur radio antennas
There is the act of rdfing and then there is the equipment. equipment will
grey area into .antenna or .equipment AND .rdf. (Not a
disagreement with the proposal, just half hearted support :-)

>rec.radio.amateur.operating Operating procedures and questions: DX,
> CW, contests, propagation, repeaters
> alternatives proposed: r.r.a.dx and r.r.a.repeaters
The .repeater group will degenerate (poor word!) I think into not much
different than .policy discussions. I'd stick with .operating with a good
short FAQ saying that .dx discussions are greatly welcomed (as the name
could add confusion for the .dxers, but much of what they will say WILL
be salient to operating procedures).

>Issues currently under discussion
>---------------------------------
>The following issues and notes relate to the discussions listed above:
>* a place for beginners to ask their typically-unfocused questions
> suggestions: r.r.a.beginner (markz/jbloom/emd)
> concerns: r.r.a.instruction allows enough room for license upgrades as well
> and r.r.a.beginner will have the same questions repeatedly (pschleck/
> ikluft/jgt10/kevin)
If I was a newbie on both USENET and Amateur Radio, I'd go to .misc first.
I am not sure we can focus beginners into any specific group, and once they
are less green under the collar, participation drops off quickly.

> results so far: only the name is in dispute, beginner or instruction will
> be on the CFV. r.r.a.instruction is slightly ahead - can everyone live
> with it?
.instruction since it encompasses more.

> results so far: only the definition is in dispute, dx or operating of some
> sort will be on the CFV. r.r.a.dx and r.r.a.operating seem to ruffle the
> fewest feathers - can everyone live with them?
I'd be saddened to see the .dx crowd not imparting their operating procedure
know how ;-) , but yes, this proposal (I don't support the split of this group,
but this split sounds the best).

> To break the deadlock: can you live with r.r.a.construction? If not,
> should we roll up products/construction/technical and call them
> r.r.a.equipment? (That seems to fit the theme everyone is arguing over.)

I rest (what, you think you have worn me out! :-) and support .equipment
as the meta for products/construction/technical/tech/homebrew/.shack (<---hmmm)

In article <1993Apr18.072512.26562@uxmail.ust.hk> ee_hflo@uxmail.ust.hk (UST Radio Station) writes:
> Which kinds of aerial is good for fox hunting?
> Yaki or loop

Yes, both are useful. The yagi is best when the fox's signal is weak at your location. You can get a rough bearing by turning the yagi for peak reading. When the signals are a little stronger, the loop will give a sharper bearing. You turn it for a null in signal strength. The loop is bidirectional so it's best to determine initial direction with the yagi and then zero in with the loop. Note that the yagi may have several minor lobes and you have to be sure you have found the major lobe during peaking. Multipath reflections can make accurate bearings with either method difficult.

Both of these antennas work by peaking or nulling the RF from the fox. Another system based on time of arrival called the double ducky can work better in situations where the signal is strong and you don't want to continously play with attenuators to keep within the limits of the strength based methods. This method uses two vertical whips on a rotatable boom. The two antennas are alternately connected to the radio at an audio rate by diode switches. When a signal comes up, you'll hear a tone in the speaker. When the array is rotated so that both antennas are the same distance from the fox, broadside of the boom, the tone will suddenly disappear. This is a very sharp directional method that's not dependent on signal strength. It is, of course, bidirectional and you need some idea which direction is correct.

A more elaborate system is the doppler direction finder. This uses several antennas mounted in a circle. They are rapidly diode switched sequentially to simulate a single antenna being rapidly rotated in a circle. As the phantom antenna moves toward the fox, the frequency of the signal will rise, as it moves away from the fox, the frequency will drop. A synchronous phase detector is used to develop a signal to drive a set of LEDs set in a compass rose pattern. The direction to the fox will be marked by the lighted LED. This system is very powerful because it's easy to use while driving toward the fox. Just keep the LED indicating the direction of the fox aligned with the direction you drive. There's also another benefit in that you can see multipath. When there is multipath, several of the LEDs will flicker wildly. With experience you quickly learn what's real and what's multipath.

When you get in very close to the fox, a very small tuned loop
on a handheld coupled by a wide range attenuator is very useful
for sniffing out the terminal location. A 3 cm loop is about right
for 2 meters. Or you can just put a dummy load on the HT and
find the fox by "hot" and "cold" techniques of walking around
the immediate area.

All of the methods above work at VHF and UHF. For HF fox hunting
most of these methods are too cumbersome for mobile or handheld
use. The ferrite loop reigns at lower HF frequencies because of
it's compact size and sharp null. One with an adjustable dip angle
can be used to get not only bearing, but also a good estimate of
range by neasuring the angle of arrival of the signal. For fixed
direction finding stations, the yagi, tuned loop, or doppler methods
can be used if you have the space.

The doppler system is the all around best for finding jammers because
it can get very quick readings for those short transmissions while
you are in motion towards the target. The other methods often require
a lot of patience, several stations, and a central plotting board.

I'm working on an automated fox locator system. I have a Loran C
unit in my truck that gives continous position updates. I'm working
on a system to pinpoint the direction of the truck nose. I've not
had good luck yet with fluxgate compasses in the automotive environment
and think I may need gyros. The course over ground information from
the Loran is averaged too much to be useful. A pair of GPS receivers
at the front and rear of the truck may be able to solve both problems,
but they're still too expensive right now. These two pieces of information
flow into a laptop computer along with relative bearing information from
the doppler system. As I drive along a baseline, I expect the laptop
software to plot a series of bearings on a map display so I can watch
the solution box converge. When the fox location is sufficiently
pinpointed, I'll be able to drive directly to it.

Speaking of hand punches. There is a little tool, made by "Adel Tool Co,
Chicago, Ill" called a nibbler. It takes a bite aprox 1/16 by 1/4 on each action
Will work on aluminum and up to .047 steel. I have made round holes by niblles
and then finished with a rat tail file. It is the only cheap way I have found
to mount the "DB" type connectors used in computers.

1152. New hams and no-codes come to rescue

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-19 15:30:00 UTC
From: pratt@utkvx.utk.edu
Message-ID: <19APR199310301375@utkvx.utk.edu>
Source record: 283016

It was reported in the RACK (Radio Amateur Club of Knoxville, TN) that during the Blizzard of '93 (the snowstorm last month that halted the entire eastern U.S.) most all of the amateur radio help came from new hams, most of whom were no-coders. During the storm, the Knox county emergency communications radio trunking system went out due to a power outage to the control repeater. So, amateur radio volunteers with mobiles and HTs came to the rescue to ride along with ambulance and police patrols to keep in contact with E-911.

Without these amateurs, it would have been a disastrous situation. Thus, the no-coders showed their true spirit of dedication to the hobby of ham radio.

Think about that the next time you want to flame no-coders

I wrote:
> I want to invest in a good key and keyer. What should I get? (If you
> want to send email, the email address in my .signature works best.)

The following is a summary of the recommendations I have received:

Keys:
Bencher iambic (2 recommendations)
Jones paddle (2 recommendations)
Schurr paddle (1 recommendation)

Keyers:
Logikey K-1 (4 recommendations)

I was leaning toward the Bencher / Logikey combination, but I'll take a
look at the Jones paddle before buying.

Thanks for the advice,

Lots o' stuff deleted along the way...

SuperMorse has the ability to change character speed. It seems
to be an excellent program -- a number of hams I know have used
it and swear by it.

sm316.zip seems to be the latest I have found at an ftp site,
however, sm401a.zip is on the ARRL BBS at 203-666-0578. I haven't
downloaded it, so I don't know anything about it. Except that it
runs about 190 Kbytes.

The soft case worked for me. I bought the 580 last June and the soft case
a few weeks later, and the print on my keys looks like new. My only complaint
is that there's not a custom soft case to fit the 580 with the large battery
pack on it.

Source record: 282930

Well, the subject heading nearly says it all! I took the elements 2 and 3A and passed (the 3B too, on a chance, and missed by one question.... BTW: what ITU region is the US in?!). Now if the call will only get here! (BTW... what is the current license delay [my test was administered by ARRL/VEC] ?)

In addition, does anyone have any particular suggestions for starting equipment, etc...? I would like to do something with 2-meters, since that seems really popular, but I am unsure of anything else. (I know, I know... LEARN THAT CODE! [I am, but slowly... time restraints! :)])

Thanks for any information you send my way!

>problem. After all, CB is supposedly for local communication.
>
700 Mhz would provide some truly awful point-to-point propagation
so I suppose some folks, particularly hams, would feel the unwashed
masses inhabiting the current CB allocations would be served their
due justice.
Somewhere I read that the frequencies between 25-30 Mhz were best for
maximum ground wave propagation due to most bending of waves versus
least atmospheric disturbance. The maximum reasonable size for a
mobile 1/4 wave whip may also have something to do with it. I don't
believe the effects of periodic skip conditions on 10-11 meters were
properly understood or accounted for when the band was reallocated
to CB class D.
Its pretty obivious to me that more spectrum is needed for those not
knowledgeable about blue LEDs and such. I guess more UHF TV channels
could be stolen as the cellular boys did but propagation would suffer.
In any case hams should be more supportive of CB needs and less
critical of their operations. Otherwise 10 meters may become a
defacto CB band if it hasn't in some places already.

1164. Software Serial Control of Radios

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-19 20:27:15 UTC
From: jimm@gvgadg.gvg.tek.com
Message-ID: <6318@gold.gvg.tek.com>
Source record: 282934

Over the weekend I was inventing a wheel, and was wondering
if anyone else out there may have already done so or might
wish to use my wheel.

It is a C++ class library for serial control of Radios.
Currently the only thing implemented are Kenwood Radios.
That is because that is what I own....
It was done with Borland C++ compilier on a PC, It
is designed to the serial routines can be easly separated
from the intelligence for easy portability between environments.

Anyone interested or wish to share what they have?

Jim Michener

When I got my ham ticket, I traded my Icom R-71 in on a Kenwood
TS-140 xceiver. Sadly, the TS-140 does not have the quality
of receiver I had with the Icom R-71. However, I do not have room,
funding, or logistics, to have a xceiver & a SWL receiver. So....

Which transceivers on the new and/or used market have the best receiver for
short wave, utility, and VLF receiving.. as well as being good ham
transmitters and receivers?

I've heard this done on 147.435 in L.A.: name, address, workplace, parent's
name, phone, etc. given out over the air. This for the purposes of
harassing the individual and his family, not necessarily because the
individual was a jammer, but because he had made an enemy of someone on the
repeater. So this sort of thing *does* happen.

1174. National Balloon Symposium Announcement

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-20 03:22:17 UTC
From: tcline@hplvec.LVLD.HP.COM
Message-ID: <21870029@hplvec.LVLD.HP.COM>
Source record: 282889

EDGE OF SPACE SCIENCES
NATIONAL BALLOON SYMPOSIUM
AUGUST 20, 21 & 22, 1993
DENVER, COLORADO
LOCATION:
Denver International Airport Holiday Inn
I-70 and Chambers Road
15500 East 40th Avenue
Denver, Colorado 80239
(303) 371-9494

SUBJECTS TO INCLUDE:
Amateur Radio Applications,
Basic Balloon Flight Procedures,
FAA & FCC Regulations,
Amateur Radio Applications,
Balloon and Payload Systems,
Applications to Education & Science,
Student Participation Projects,
Balloon Organization Development,
Payload Tracking & Recovery.

ACTIVITIES:
Friday Evening: Social Hour, Exhibits and Videos.

Saturday: Morning Sessions, Luncheon.
Afternoon Dual Track Sessions, (Technical and Education).
Social Hour, Banquet.
Exhibits and Videos.

Sunday: Morning Balloon Launch (conditions permitting) and
Ground Station Display.

REGISTRATION INCLUDES:
All events at the Symposium, two meals on Saturday, and a copy of the Proceedings. Two options are available for each meal. The Saturday luncheon choices are Lemon Chicken or Chopped Sirloin. The Saturday evening banquet choices are Chicken Cordon-Bleu or London Broil. Special diet needs will be met on an individual basis. Please specify menu choices and special diet needs on the attached registration form.

LODGING:
Applicants must call Holiday Inn direct (303) 371-9494 for reservations. Mention the EOSS National Balloon Symposium for symposium rates. Rooms confirmed before August 8 are $57.00 + tax

(single or double). Special rates after August 8 on space available basis only. Applicants are responsible for rooms, taxes and incidentals.

CALL FOR PAPERS:
EOSS invites balloon experimenters, educators, authors and scientists involved with high altitude balloon experiments to provide papers and presentations at the National Balloon Symposium. Papers, in electronic form, should be submitted before May 8, 1993. For additional information, contact Ann Trudeau, 15487 E. Bates Ave., Aurora CO 80013, (303) 690-1669.

DEADLINE FOR PROCEEDINGS SUBMITTAL: May 15, 1993.

FOR ADDITIONAL INFORMATION:
Contact Rick von Glahn, N0KKZ, 74620.637@compuserve.com .

Ted Cline, N0RQV ted_cline@hpisla.lvld.hp.com

1175. Has anyone contacted Washington State Univ?

> Well, according the "Purpose of Amateur Radio" as codified in part 97, the ha
> bands are not "citizen's bands". The amateur allocation's scope and purpose

That is what it says on paper, but take your scanner and listen to your
local 2M repeater, and you will see 2M is just like cb, but on a higher
level. (very little technical conversation, mostly chit chat.)

As for packet, that is an even bigger fraud of spectrum, their is no
"Experimentation" going on, just users taking advantage of the available
spectrum to setup their own personal or club packet bbs systems. The
computers are BOUGHT, the transmitters are BOUGHT, the antenna is BOUGHT
and the software is BOUGHT (or copyed) WHERE IS THE EXPERIMENTATION!

> Citizen's bands should be large radio parklands of spectrum set aside for
> general citizens to use without any content restrictions. This spectrum
> should serve for personal communications, personal business, and low-level
> broadcasting. Most importantly, this "parkland" should be available to

I'm not sure about 'Low level broadcasting', perhaps a section of your
proposed band could be set aside for that, as for personal & buisness,
they would need seperate area's as well. (In Australia we have a 40 Ch.
UHF CB service as well as HF 27 Mhz) and the private users are always
telling the buisness users 'Where to go'. But I still agree with your initial
principal.

> These proposed citizen's bands would not be anything like the 11m band we
> have today. It can be easily argued that the problems with that band have

How can you say that? Congestion is only 1 of a number of problems 11M
faces todays.

This conversation reminds me of an artical I saw a few years back, (can't
remember where) stating that the spectrum costs nothing to provide,
nothing to maintain (not policing, the other type), and it never wears
out. So why do governments use it as such a money making tool?
To buy 12.5Khz of spectrum in a built up city, can cost over A$1M, who
should I make the cheque out to "GOD" ?

I don't know if the HTX-202 has an adjustment for tone level but I don't think that I would want to mess around with the deviation without the proper equipment! I might want to look for a pot to adjust the tone level independantly of the mic. level. I know a friend here in Winnipeg that has a schematic and maybe even a service manual so I'll ask him if you haven't obtained that info.

>Well, I need the mod for the Yaesu FT-530 portable.. I had it, but then
>I tried to install DOS 6 and DoubleSpace, and, well, it wasn't pretty.

Why would anyone want to "degrade" their 530 by trying to install MS-DOS
on it? My 530 is still running off of floppies until Yaesu debugs their
harddisk controller. Apparently the controller is accepting commands
from everything in the chassis, even the power supply. Seems Yaesu
can't seem to get tight frontends on anything! Luckily, OS/9 will still
run off of floppies. :-) :-) :-) :-) :-) :-)

>Anyhow, anyone who has the mods, please send it to me at one of the

Here's what I've lifted from a local BBS. If you have something a
little more definitive I'd appreciate getting a copy. Still, it's
pretty close to what a Yaesu rep' told me when visiting HRO a couple
months ago. TNX!

-Rusty-

----- CUT HERE -----

Yaesu FT-530 Extended Transmit and Receive

This modification for the Yaesu FT-530 is claimed to provide
extended receive coverage from 110-180 MHZ and 300-500 MHZ and
expanded transmit coverage from 130-180 MHZ and 400-470 MHZ. Also,
it is claimed that the 800 MHZ band can be received.

I have not yet implemented this mod so can not speak to its
validity or effectiveness. When I do I will try to take
sensitivity measurements. Look for further messages on this.

If you would like to have a copy of these instructions with a
diagram showing the location of the jumper pad, please send me an
SASE at the following address:

Terry Berman AB4UM
1449 Kingstream Dr.
Herndon VA 22070.

AGAIN -- Since I have not yet tried this mod it is strictly CAVEAT
EMPTOR.

1. Remove antenna and battery

2. Remove four screws on bottom holding battery track.

3. Remove the four (black) screws holding rear case.

4. Slowly....open the front cover from transceiver and lay both
halves on table.

5. Note positioning of white paper insulator in right half of radio
and lift out (do not throw away).

6. Carefully locate jumper pad 13 and remove solder. The jumper
pad is located on the lower right of the transceiver. There are 16
pads in all arranged in two columns. The column to the left is the
even numbered column (i.e., pads 2 through 16). The column to the
right is the odd numbered column (i.e., pads 1 through 15). Pad
number 13 is the second pad from the bottom (counting the bottom-
most pad as the first); or the seventh pad from the top (counting
the top-most pad as the first).

7. Re-install white paper insulator, make sure the ground tab
slides through the paper insulator.

8. Close radio back up (careful not to pinch the ribbon cable near
lithium battery when closing case halves).

9. Re-install the four (black) screws holding rear case.

10. Re-install four (small silver) screws on bottom holding battery
track to radio body.

11. Attach antenna and battery.

12. Turn off radio ..... Press and hold both arrow keys while
turning on radio.

1181. IRC's in Germany

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-20 07:02:05 UTC
From: planke@systemtechnik.tu-ilmenau.de
Message-ID: <1993Apr20.070205.2115@news.tu-ilmenau.de>
Source record: 282948

Hello,

a discussion was on last weeks about IRCs and whether they are valid everywere
and for AIR mail or not.
The facts about German post:

Yesterday I was on town's Post Office here in Ilmenau.
They know only the "old" IRC, not the new one for $0.95. Thats why the would
give me only the equivalent for the well known old IRC.
This is postage of normal mail, means sea transport how you can see below.
Not for AIR MAIL!

Because the postage for normal oversea mail is 2.00DM since April 1st instead
of 1.40DM before they give me only for the IRCs stamped AFTER April 1st
2.00DM in stamps - for all those stamped before only 1.40DM.

Now air mail letter costs 3.00DM at least.

So: 1 IRC is not enough for a air mail reply from Germany. Thats the thruth.
Sorry.

To buy you have to pay 2.50DM each IRC.

Happy QSLing...

1182. Re: Saturn radio installation tips wanted

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-20 10:16:22 UTC
From: taber@cimfie.enet.dec.com
Message-ID: <1993Apr20.143211.25222@ryn.mro4.dec.com>
Source record: 282962

In article <1qms2d$74s@vela.acs.oakland.edu>, mje@pookie.pass.wayne.edu (Michael J. Edelman) writes...
>I've just ordered a Saturn SL1, and I'll be installing VHF and HF radios in
>it. Running a power bus to the fuseblock looks wonderfully straightforward,
>but I wonder if anyone has any tips on mounting the radios themselves in
>a Saturn? Replies direct, please, to:
>

Because I saw an RF warning in the owners manual, I called the Saturn factory and spoke to an engineer before I bought bought my SL-2. This is what he said: to avoid interference with the on-board systems, install the radio RF deck away from the driver's side -- either on the passengers side or (ideal case) in the rear seat area. The roof, trunk lid and hood are sheet metal and can be used for mounting antennas. DO NOT DRAW POWER FROM THE FUSE BLOCK! Go direct to the battery.

In my case, I was installing a remote-head dual bander (Kenwood 732A), so it was easy to meet the ideal case of RF deck in the rear. Some tips from my installation: There are plastic moldings that stretch from the font to the back at the lower part of the doors. These are great for running cable. Use a plastic spatula to lift the molding then push the wire up in. Be careful not to foul the seat belts.

The wiring harness enters the car from the driver's side upper firewall. There's a what looks like a tape wrap around the harness just before a big grommet. The tape is acutally over a "snoot" on the grommet. If you CAREFULLY cut the tape (and not the snoot) you can slip your wire through and not have to drill any holes. The battery is right in front of you at that point, and it takes no more wire to reach it than the fuse block, so it's no big deal to do.

I haven't found a great way to connect to side-post batteries yet. Someone must sell an adapter that screws into the battery and provides a binding post, but I haven't found one. What I do is flatten the wire with needle-nose pliers and then slip it into the connection. I don't like this solution because it's not mechanically sound and it reduces the area of the battery cable contact. But it's what I've done and what I did on my old GMC truck. I'm sure someone in net-land will know where the right gizmo can be obtained.

So far, not a single problem. Good luck.

There was an article in one of the ham magazines over a year ago about it.
The equipment is not very sophisticated, meaning it's not something only
the FCC can do. All radios no matter how clean have harmonics and spurs.
These are likely to be as unique as fingerprints when accurately messured.
Old fashioned Specgtrum Analyzers probably couldn't do the job, but with
todays equipment (DSP, PC Osciloscopes) it would seem to be a rather trivial
task to acquire the accuracy needed.

>ultralights flying around sometimes.

$60,000 seems VERY steep to me, although the FCC has been cracking down on
the 14.313 mess in the last few months, and HAS, in fact, been able to
nail people for interference and/or illegal operation by taking a finger-
print of the transmitted signal, along with direction finding techniques.

So it is true, to some degree. The FCC can find you with some DF'ing,
and a tape recorder. You don't even have to be caught in the act to get
caught!

Message-ID: <BAT.93Apr20084203@gdstech.GRUMMAN.COM>
Source record: 282798

Most new Hams who get on 2 meters acquire an HT first. This way,
they have a radio to use in the car, and at home as a base or
packet station. But, they start adding accessories, like
speaker mikes, 12 volt lighter cords, amplifiers, etc. Soon,
the cost of the setup is near the cost of a good mobile rig,
which can also be used at home for base or packet work.
I wore out 3 connectors on top of my HT with the constant
moving of the radio. So, I got an IC-229h, and it's much easier
on me.

EDITOR'S SPECIAL NOTE: There will probably be no bulletin next week, because I will be at the Dayton Hamvention. I usually write the bulletin during the weekend so the information is current. But you never know! So PLEASE keep the information coming..... de Tedd KB8NW

3Y, PETER I ISLAND. This much needed island was ranked number one as the most wanted country in the "OPDX/NODXA 1992 DX Survey" which was taken between December/1992 thru March/1993. It was announced that an international team of ten operators are planning a 16 day operation. The slated starting date is February 1, 1994. The 10 operators will operate with 4 complete stations and be active on all bands, CW, SSB and RTTY. The contracts for ship transportation have been signed, deposits have been paid, operating license and landing permit are in hand. Ralph, K0IR, and some of the operators from the VP8SSI DXpedition, that took place last year will be the lucky operators to go. Funds are needed for this very expensive DXpeditions. Contributions for this endeavor can be sent to AA6BB. If this operation does not take place, all funds will be returned. QSL routes for SSB will be AA6B, CW/RTTY will go to KA6V.

9ER1TA OPERATION FROM ERITREA. This information is from the League regarding the status of the 9ER1TA operation. Bill, K5FUV, from the ARRL DXCC Desk, has stated that the 9ER1TA license was issued by the Eritrean provisional government. If it turns out that Eritrea is re-instated as a DXCC country and the license is retroactive, QSOs will count as QSOs with Eritrea. If Eritrea is NOT re-instated, the QSOs will not count for Ethiopia because the license was not issued by the correct authority (the Ethiopian government).

C2, NAURU. Atsu, C21/VK2BEX, has been reported operating RTTY and CW on 20 meters sometime between 0530 and 1430z. His other activities included SSB operations on 80 and 40 meters between 0930 to 1030z. QSL via his

Call Book Address (CBA).

P2, PAPUA NEW GUINEA. Bernard, DL2GAC, who is now active as P29VMS, has plans to operate from Witu Island around April 22 thru 27. This island has not been assigned an IOTA number as of yet. Bernard may also visit some other islands such as Puka and Rabaul. QSL via DL2GAC.

P5RS7 STATUS. Ed. NT2X, reports that Romeo has been asked by the DXCC Desk to furnish additional documentation for the P5RS7 operation. This additional paperwork can only be obtained from North Korea. However, due to the U.S. and South Korean maneuvers (called "Team Spirit"), North Korea has expelled all foreign diplomats and has placed its military in a state of alert. The additional paperwork will have to wait until things settle down.

PREFIX CHANGES. As of March 1, 1993, Kazakhstan has begun assigning the call signs "UN" series in several oblasts (ex. UL7 to UN7, RL7 to UN9, UL8 to UN8). It was reported that all the "UL" series will be replaced throughout the year and that the "UL" prefix will be going to Uzbekistan. Kazakhstan has been assigned the following prefixes: UN, UQ and UP. QRZ DX reports that Bosnia-Herzegovina will begin using call signs with a "T9" prefix, starting April 20.

ST0, SOUTHERN SUDAN. John, PA3CXC, is now active as PA3CXC/ST0. Most of his activity has been on CW, operating on 17, 20, 30 and 40 meters between 2100 and 0330z. His length of stay is unknown and John also reported that there is an indication, with the deteriorating situation in the Southern Sudan, separate independent republics may be established within their controlled area.

T5, SOMALI. Peter, DL8YR, will be active from here for 4 weeks starting April 21st. His call sign will be T5YR, and most of his activity will be on CW.

VK6, NOOK ISLAND (IOTA not assigned yet). VK6UE, VK6BFI and VK6VZ will try to activate this island (in the Houtman Abrolhos Island group) for a 4 to 5 day operation between April 4 and May 2. Activity on CW will be 5 kHz up from band edge and on SSB: 3795, 7075, 14195, 21295 and 28495 kHz. QSL vis VK6ANC direct only to: Box 244, North Beach, WA 6061, Australia.

VP8, FALKLAND ISLANDS. Mike, VP8COD, has been active on 14256 and 14174 kHz between 2300 and 0000z. He has also been heard on 21260 and 21255 kHz between 2100 and 2230z.

ZS9, WALVIS BAY. There has been some activity from here on the past three Tuesdays by ZS9A. Check 21335 khz around 1345z. QSL via ZS1IS.

DXCC NEWS. Exciting news hit the air waves April 13 when the ARRL Awards Committee announced that Macedonia (former Yugoslav republic), the Czech Republic and the Slovak Republic were added to DXCC Countries List and that Czechoslovakia was deleted from the list. Details can be found in ARRL DX Bulletin 18 (ARLD018), but in summary: Contacts for Macedonia

(4N5, YU5) that were made 8 September 1991 and after are good for DXCC credit. The effective date for the Czech Republic (OK, OL) and the Slovak Republic (OM) is 1 January 1993, anything before that date will count for the deleted country of Czechoslovakia. The DXCC Desk will accept QSL cards for these three new countries starting 1 June 1993. QSL cards received at the DXCC Desk before 1 June 1993 will be returned without action.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and operates Group 3 FAX Service Class 2 (EIA/TIA 592) only. Use only the dates and times specified. FAX Service Class 1 (EIA/TIA 578) is availble upon request by leaving a message to the Sysop on BARF-80 BBS. The FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

Hello.

I have a Realistic PRO-2024 scanner for sale.Here is a small desc
ription:

60 programible chanels
fully detailed backlighted digital display
headphone jack
antenna jack
removable telescoping antenna
auto search

coverage:
30-50mHz
118-174mHz
380-512mHz

It originally cost $200, but I will sell for $150.

Thank You.

1194. Drake 2A Communications Receiver

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-20 16:15:49 UTC
From: twinslow@stein.u.washington.edu
Message-ID: <1r17jlINNin@shelley.u.washington.edu>
Source record: 282959

I have inherited a Drake 2A communications receiver and am at loss as to how to use it. It turns on fine (I was able to deduce the power switch) but there are many switches and knobs that I do not know what to do with and after playing with it, leave no clue.

It also seems to have a 4 pronged tube receptical in the middle, back of the radio empty. What kind of tube is supposed to go in there? Other than that (and a little dust) the radio seems to be in great shape.

Source record: 282882

I have been trying to connect with the Celestial BBS for a while but
have had no luck. I am running Pcplus and have a P.C. Logic 14.4 modem
and have had no trouble with any other board in North America. The
trouble I seem to be having is just as I'm about to finish the connect
sequence I hear a click from my modem and the call disconnects. I'm
thinking that there is nothing wrong on my end or their end, but that
there may something special about the proper way to connect to this BBS.
Can anyone out there please help me out???
I have tried various setting, the write up of the BBS is 24hrs.
9600/2400/1200 baud 8 bit NO parity 1 stop. Phone 513-427-0674
Thanks for your help

(4.1/SMI-4.1) id AA06954; Tue, 20 Apr 93 12:25:46 EDT

I asked this question before, but got no response, so I'll ask once more
before I write my own.

I'm looking for a piece of software to talk to the Yeasu CAT interface
on my FT736R. I know it exists as I saw it in action on a satelite gateway
system video tape. The program sends/receives cryptic ascii commands to
the RS232 add-on box on my radio, and instructs the radio to change modes,
change channels, etc. Anybody have such a program they would like to share?

> (BTW... what is the current license delay [my test was administered by
> ARRL/VEC] ?)

The exam liaison has ten days to send it to the ARRL/VEC. The ARRL/VEC processing time runs between 2 and 7 days in my experience. There is also the postal delays (though the ARRL has gotten very good about using various express services). The FCC seems to have settled back down to the 6-10 week time frame.

> In addition, does anyone have any particular suggestions for starting
> equipment, etc...? I would like to do something with 2-meters, since that
> seems really popular, but I am unsure of anything else.

Since you are an undergrad, I suspect that a handytalkie would be best for you (spend a lot of time outside of a car). Also I suspect 440 is not a bit issue up there so a single bander would save you a lot of money. If you have a car, that and a mag mount antenna to plug it into will do you pretty well. A couple of spare batteries are always nice.

Since you list a CAP affiliation, you may wish to ask around about radios that can legally be modified for operation on the CAP frequencies adjacent to the amateur bands.

Not only is it not all that tough, it was done by an amateur to begin with (he's an AMRAD member, I remember going to a talk on the subject back before I got annoyed with AMRAD as an organization about three years ago). I do know this is what was used to identify NS3K's fake distress calls on 14.313.

>

Not to skirt your question but:

It almost doesn't matter whether or not the school itself has a club,
because they may or may not be the ones who give exams.

One sure fire way (with the correct price attached) to find local testing
opportunities is to ask us for a complimentary ARRL Prospective Ham
Package. It'll give you BOTH of what you need:

1. All known amateur radio exam sessions in your area and
2. All known Amateur Radio clubs in your area

And a BUNCH more useful material to boot. We need your name, your mailing
address and a specific request for the PHP.N

Hello Thomas,

Thank you for the information about IRC's in Germany. The problem
appears to be with your Post Office, and not with the IRC's or with
the people who send only 1 IRC for return postage. Please ask the
workers at your post office to read the printing on the new IRC and
abide by what is written there. I always send only 1 IRC when QSL'ing

European stations, including Germans, and have had no problems. It makes me very unhappy that some QSL managers demand more than one IRC when only one should be needed.

1202. Re: Yaesu FT-470 mods

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-20 19:06:51 UTC
From: brian@amdcl2.amd.com
Message-ID: <C5sqFF.n2y@amdcl2>
Source record: 282976

My mailbox overfloweth and so I posteth! Here is the canonical list
of 470 mods. -brian

cut here
-=-

Yaesu FT-470 MODS
Rev D (Aug 28, 1992)

This is a collection of hardware and software mods for the Yaesu 470.
I have collected every mod seen on the net (ie. Usenet) since the
introduction of the 470, so I think this list is fairly complete. I
am interested in getting updates and corrections to this list, so
please send me e-mail if you find something that needs updating.
(This includes typos, wrong or missing attributions, caveats, warnings
about unmentioned side effects, serial numbers of radios that won't do
some of these mods, etc.)

SOME OF THESE MODIFICATIONS CAN DAMAGE YOUR RADIO IF YOU PERFORM
THEM IMPROPERLY. WHEN IN DOUBT, DO NOT PERFORM THE MODIFICATION.

This advice is free, so remember that you get what you pay for.

Brian McMinn (brian.mcminn@amd.com)
N5PSS
512-462-5389

-=-

Full Reset:

Effect: Severe! :-)

1) Make hard (paper) copy of all memory info
2) Turn radio off
3) Hold down VFO and MR and turn radio on
4) Replace all memory contents

Notes: This will reset the auto repeater offset function, so
you will need to re-enable it if you use it. This will also
disable (mask) all memories except #1, so you will have to
enable each of them by hand.

Attributed: Yaesu

-=-

MARS Mod:

Effect: Enable extended 2m receive, 2m transmit

1) Make hard (paper) copy of all memory info
2) Turn radio off
3) Hold down up-arrow and down-arrow and turn radio on
4) Replace all memory contents

Notes: This mod wipes all memory contents. This is a "toggle" mod in that it can be un-done by repeating the above steps. The normal->MARS mod only wipes the memories. The MARS-> normal mod not only wipes the memories, it appears to do a complete controller reset (see above).

Result: Receive range 130-180 MHz, transmit 140-151MHz (I think, I haven't tried it.)

Attributed: Yaesu

-----------------------------------------------------------

* This is the normal US configuration after MARS mod.
** This is the normal European configuration.

(Note: the receive only ranges are enabled by powering up the
unit with the up and down arrow buttons depressed...kjm)

When there is more than one combination which has the same
frequency range, the difference is the default step size
and/or the default repeater offset. Of course, choices that
do not match the VCO and filters do not actually transmit or
receive on those frequencies. A particularly strange example
is that the VHF side of the set can be set to tune from 404 to
444 MHz, but again, it won't actually lock. Even in the
101-141 mode, the VHF VCO will not lock - this must be for use
with some other sort of VCO (It looks like this would cover
the aeronautical band rather nicely.) There are two really
wierd VHF settings, those for 8AL-242 and 1R3-158L. These
must be for use with some other LCD controller - it displays
truly unusual and non sequential thins when stepped through
the "bands".
```

R74 seems to have something to do with selecting the IF frequency, or something similar. When set, it really screws up the VHF reception.

My technique for determining these straps is to remove the straps that come in the unit, solder wires to each pad, run the wires out of the unit to a bank of DIP switches, screw the unit back together, and then go through all of the DIP switch combinations. I usually use a stereo microscope and 30 guage wire for this. Since I didn't try powering the unit on with every combination of keys held down for each DIP switch combination, there may still be other secrets possible.

I was looking for something like receive and transmit from zero to infinity, but I didn't find it. I determined, from studying the schematic, that there should be a hiddem strapping diode from CPU pin 2 to CPU pin 22. I installed one, but nothing changed. In fact, changing it and powering the unit up did not cause a reset. Therefore, I concluded that this really wasn't a mystery strap, afterall. However, there could be others. I'm trying to get a data sheet for the CPU, from Hitachi, to see if any of the grounded pins are actually I/O pins -- they might be good candidates, particularly if their traces are routed in such a way as to be easily accessible for cutting.

I've learned that one of the ways to get some of the other, new Yeasu handhelds to go out-of-band involves dumping data out of the clone port, editing the data, and then dumping it back in. I called Yeasu and asked if the FT-470 could be cloned. They said no, so I ignored them. I haven't figured out how to get it to dump data, but I believe it will accept data. The clone mode is entered by powering up the unit with the F key held down. (It's also a neat way to see all of the indicators on the LCD!) The data must be presented in the ring ("right channel") of a stereo 2.5 millimeter plug which is placed into the mic jack. This is cryptically marked on the schematic, anyway. However, I have no idea what the format for the data should be. If you come across this, I'd love to know. This may be the trap door to getting the rig to receive and transmit in more interesting places.

Attributed: Ed Boakes (WB3FLD) att!hocpa!ewb

-=-=-=

4) Just to the top left of the lithium battery is ONE vertical
solder pad (a.k.a. R69). It is almost under the top left
edge of the battery.
5) solder a jumper accross this pad.

Result: Extended VHF transmit

Bugs: The automatic repeater shift (- offset below 147,
+ above etc...) goes away with this mod.

Attributed: randall@informix.com (Randall Rhea)
Also attributed to: Bernie NU1S @ K1UGM

-=-

Software UHF Receive Expansion:

Effect: extend UHF Rx to 500MHz without shrinking Tx range

How: Trick 470 into accepting big number in U register.

Caveat: This mod acts differently on different radios.

1) Turn the beep on. (Some, perhaps all, 470's require that
the key-press-beep function be on in order to do this.)
2) Program the frequency of 450.00 MHz simplex.
3) Set the repeater offset to zero (F/M RPT 0000) but DON'T
get out of the set mode (don't hit RPT again).
4) Turn the radio off then back on.
5) Set a "+" offset (press RPT twice).
6) Press the REV button one time.
7) The radio should now display 1450 MHz.(The radio will not
operate at these frequencies. My service monitor shows
that above 500 MHz the rx is very weak.)
8) Use the shifted down-arrow key to tune this frequency down to
around 500 MHz (press F/M, press and hold down-arrow). Yes,
this takes a while.
9) Store this in the "U" memory. (press and hold F/M until
you hear two beeps, rotate tuning knob until "U" appears in
upper left, press F/M again).
10) Reset the repeater offset to 5 MHz. (F/M RPT 0500 RPT)

Result: By selecting the "U" memory and the using the memory
tune fuction (select "U" memory and then press MR), you can
tune to the desired frequency and then store it in another
memory.

Bugs: Above 500 MHz, some radios will let you tune up and
down in frequency, some won't (they jump back to the ham
band). Some radios will let you enter a frequency above 500
MHz on the keyboard while in memory tune mode, some won't.

Attributed: Darrell Sego KM9S

-=-=-=

- alternative procedure
- note: this short-cut requires you to enter 430.00 MHz
in step 1.

5. Press RPT twice for a "+" (plus) indicated
repeater offset.
6. Press REV once.
7. Press RPT twice to select the "-" (minus) repeater offset.
8. Press REV once. You should have 1030.00 MHz displayed.
9. Press F/M and hold the down-arrow stopping at 999.00 MHz.
10. Press REV once. You should have 399.00 MHz displayed.
11. Press F/M, then hold the up-arrow) key to increase the
displayed frequency. Stop at 400 MHz.
12. Press RPT twice to select simplex operation.
13. go back to #9 in previous list

Steps for setting the UPPER VHF limit to 200 MHz.

1. Program the frequency for 140.00 MHz *SIMPLEX*.
2. Press F/M, then RPT for the offset.
3. Enter the code 0000 into the keypad.
4. Shut the transceiver off, then turn it back on.
5. Press RPT twice (for a "+" (plus) indicated offset).
6. Press REV *ONE* time.
7. The radio should now display 1140.00 MHz.
8. Press F/M, then hold the down-arrow key to decrease the
displayed frequency. Stop at 800 MHz.
9. Press RPT twice to select the "-" (minus) repeater offset.
10. Press REV once. You should have 200.000 MHz displayed.
11. Press RPT twice to select simplex.
12. Store this in the "U" memory. (See above steps...)
13. Press F/M then RPT then enter 0060 (600 Khz repeater
offset) then press RPT again.

Steps for setting the LOWER VHF limit to 100 MHz.

1. Program the frequency for 140.00 MHz *SIMPLEX*.
2. Press the F/M, then RPT for the offset.
3. Enter the code 0000 into the keypad.
4. Shut the transceiver off, then turn it back on.
5. Press RPT twice (for a "+" (plus) indicated offset).
6. Press REV *ONE* time.
7. The radio should now display 1140.00 MHz.
8. Press F/M, then hold the down-arrow key to decrease the
displayed frequency. Stop at 1100 MHz.
9. Press RPT twice to select the "-" (minus) repeater offset.
10. Press REV twice. You should have 100.000 MHz displayed.
11. Press RPT twice to select simplex.
12. Store this in the "L" memory. (See above steps...)

13. Press F/M then RPT then enter 0060 (600 Khz repeater offset) then press RPT again.

Notes: To use the higher frequencies you have to select the "U" channel and press MR. This puts the handheld in the "MT" (memory tune) mode. From there you can scan down or use the (DIAL) knob to go to a lower frequency. ...Likewise for the lower frequency memory. Any frequency selected using this method can be stored in any memory.

My radio will not let me go up in frequency, only down. If I try, the rig will default back to the original ham band. I had to be careful when doing these mods.

One trick I found when initially setting up the VFO with the expanded upper and lower frequencies is that in steps 5 (and 9) if you select "+", pressing REV adds 1000 MHz to the display or subtracts 1000 MHz if it has already been added. If you selected the "-" (minus) repeater offset, pressing REV will subtract 400 MHz if the displayed frequency is 1000 MHz or higher, or subtract 600 MHz if the displayed frequency is below 1000 MHz, until any more subtractions would run the frequency negative, after which it alternatively adds or subtracts 600. You can mix the up-arrow down-arrow method with the "+ -" offset/REV combination to reduce the time getting to the desired frequency. With these tricks, many permutations can be found to get where you want to be very quickly.

I have discovered the code "5555" works as well as "0000" for the enabling code.

Attributed: fletcher@lode.uwyo.EDU (Walter Reid Fletcher, WB7CJO)

-=-=-=

must access the out of band frequencies from the MT (memory tune) mode, AND you must start from either the "L" or the "U" memory.

To use MT:
1) Press MR and select either the L or U memory.
2) Press MR again, a small MT should appear on the left of the display.
3) You may now tune with the arrow keys, Dial knob, or directly enter frequencies with the numeric keypad.

Attributed: kd6hr.El_Segundo@xerox.com (Pete McAfee)
[ed. It looks like Pete may have been the first to discover some of these neat tricks... any comments?]

-=-=-=

401 -40 dB
402 -38 dB
405 -34 dB
410 -27 dB
420 -9 dB
430 +1 dB
440 0 dB
450 0 dB
460 -17 dB
470 -26 dB

Results: The radio is good outside the ham bands, but the sensitivity really starts to suffer. I hear the local police at 460.375 quite well, so -17 dB is still usable, but not as good as a scanner would probably be. VHF down to 100 MHz or UHF down to 400 MHz is a fantasy. As I mentioned in another post, if the frequency ranges are extended too far, you start picking up signals at the wrong frequencies. National weather service (162.4) received at 119 MHz, coast guard channel 12 (156.8) received at 200 MHz, 2 meter repeaters received around 190 MHz and again around 182 MHz. Its hard to say just what the usable ranges are, but something like 136-165 MHz in VHF and 410-470 MHz in UHF, and even then its not great at the ends of these ranges.

Attributed: frankb@hpsad.HP.COM (Frank Ball)

-=-=-=

After I had done this mod, I found out that if I was scanning (in either Memory Tune mode or band-scan mode(between U & L)) the VHF side of the radio in the sub-band, and listening to an extended frequency in the UHF main band, the scanning would stop and revert back to whatever frequency it started from whenever a signal was received on the UHF side. (I don't know what frequency it reverts back to if you are scanning a VFO, but I do know that a similar thing happens).

Attributed: v108qhu6@ubvmsd.cc.buffalo.edu (David N Smernoff)

-=-=-=

After doing the software receive mod, the radio will pick
up 2m frequencies when the display is in the 180-190MHz range.

Also, the ARS (Automatic Repeater Shift) will turn on
once in a while when scanning from 100 MHz to 200 MHz.

Though my radio is almost 2 years old they did the work free
of charge. I tried to have them send me the parts to do it
myself but I couldn't talk them into it.

Attributed: rogerm@hpfcso.FC.HP.COM (Roger Mitchell)

-=-=-=

product depends upon the design of the first mixer and the gain and linearity of the preamplifer, as well as the ability of the input filter to reject 156.06 MHz. Since the VHF front end is fairly broad, the filter will do little good.

I suspect the IF frequency change in the 470 occured as a result of spurious problems, since the IF frequency should not affect the intermod dynamic range. In fact, another ham in the area brought his 470 over and we checked it for its intermod performance and it was identical to mine, however his had the original 17.3 MHz VHF IF. Thus I guess my performance is typical. From email I have received since my original posting, it appears that this type of performance is typical for dual band radios made by all of the major manufacturers.

The reason that CB got 27 MHz is that 27.120 +/- .163 MHz is an
Industrial/Scientific/Medical band, and the users of that service
are allowed to output unlimited amounts of crap.

It's also fairly cheap to build radios at that low a frequency.

I am currently a no-code (N7YIR). I plan to upgrade as soon as I am finished with school. My wife and I are both full-time students and we have two kids so I do not have a lot of "extra" time to study code. As it is, I barely have enough time to talk on my radio. The no-code entry for me was perfect because I have wanted to be an amateur for quite some time, but did not have the time to study code. Once I heard about the no-code, I took advantage of it and got my license. I do a lot of traveling back and forth to the Phoenix area, (Mesa) so I felt much more secure using a radio that I know would work if I got into trouble, (unlike CB). My father is an original Tech (KA7PMI), he's the one that got me interested.

I just wanted to defend myself since there seems to be a lot of flaming to no-codes. I understand the importance of code and do plan on upgrading as soon as I can. Not all of us are bad. Try to be patient and smile a little more-life is much easier then. Thanks for the "rebuttal"
73, Mike

I think it's a fine radio. The Kenwood has better rx audio, but looks ugly and has a lot of stupid unnecessary features. I bought an IC-W21AT and with a power + two button powerup sequence it has rx coverage (in two bands) from 50Mhz to 1Ghz. It comes with schematics and the diode config to get it the right tx coverage in the US, Europe and Australia.

> frequency while you transmit on the main frequency. Is there any way
> to turn this off?

RTFM: <func>+D (band) held for a second turns it into a mono bander.
D (band) then switches between VHF/UHF.

power, # and B (mr/mw) turns it into a general coverage 50Mhz to 1Ghz rx.

Nah, bite the bullet and build a PIN diode switched ``Dopplerscant''
consisting of 8 (or more) 1/4 wave whips (QST circa late 70's).
Target 'em and then jam 'em -- ECM.

I am taking a 6 to 9 month assignment in the U.K. (London area). I've called the ARRL for the forms to get a reciprocal license. What I would like to know is:

1. What's 2/220/440 like?

2. Is there packet? TCP/IP?

3. What are the HF bands and priviledges?

4. Are there clubs? Club Stations, etc.

5. Will I be able to bring in my own equipment?

6. Anything I've left out?

73's and thanks for the info

700 Mhz would provide some truly awful point-to-point propagation
so I suppose some folks, particularly hams, would feel the unwashed
masses inhabiting the current CB allocations would be served their
due justice.
Somewhere I read that the frequencies between 25-30 Mhz were best for
maximum ground wave propagation due to most bending of waves versus
least atmospheric disturbance. The maximum reasonable size for a
mobile 1/4 wave whip may also have something to do with it. I don't
believe the effects of periodic skip conditions on 10-11 meters were
properly understood or accounted for when the band was reallocated
to CB class D.
Its pretty obivious to me that more spectrum is needed for those not
knowledgeable about blue LEDs and such. I guess more UHF TV channels
could be stolen as the cellular boys did but propagation would suffer.
In any case hams should be more supportive of CB needs and less
critical of their operations. Otherwise 10 meters may become a
defacto CB band if it hasn't in some places already.

>and the software is BOUGHT (or copyed) WHERE IS THE EXPERIMENTATION!

Where is it written that you must STEAL to do experimentation? All experimentation requires acquiring the necessary components and tools to do the experiments. Honorable people PURCHASE those necessary components. Whether the component is a rotary spark gap, a vacuum tube, a transistor, an IC, or a TNC is only a matter of level of integration and abstraction of *components* in an experimental system.

Many packet operators serve only as test data generators for those doing network and messaging system experimentation and development, but that's an important part of the process. Many packet operators are participants in ad hoc networking experiments. The results of these tests and experiments have shown the futility of digipeaters and spurred the development of full digital repeaters, Netnode systems, TCP/IP over radio routers, cooperative mail handling systems, and the like. Other results of the experimentation by ordinary users has pointed component developers in the direction of higher speed modems, weak signal modems, and narrow bandwidth systems like Clover. Without user testing and validation there's little reason to believe that commercial users would have TNCs for their data systems, or that the US Army would have purchased thousands of amateur developed TNCs for Desert Storm. The amateurs did the hard work to discover how to make these components workable parts of datacom systems with unreliable links and changing network configuration.

Hardware is only a small part of packet, firmware only another small part. The biggest part is the cooperative structures developed by ordinary hams to create ad hoc radio networks. This is a very new thing. Before the work by amateurs, networks were pre-planned static structures, aside from some ARPA experiments. It was amateurs buying TNCs, radios, computers, and software and throwing them on the air helter skelter who found out the pluses and minuses of ad hoc networking and ways of dealing with them. This is still an infant field and amateurs continue to do pioneering work probing various network structures and working on exploratory routing methods. Even someone who doesn't know which end of a soldering iron is hot and who thinks a union is something teamsters join is in a

very real sense an experimenter with packet networks.

Hold on a minute.... When I read about the aforementioned fine in QST a
month or two ago, I also thought to myself, 'wow, that seems pretty
Star Trek-ish'... But - I quote you from May 1993 QST ads, p. 140 -

"Transmitter Finger Printing is Here!

"Every radio transmitter has a unique frequency phase-in characteristic.
This 'finger-print' can be captured, stored, and analyzed....."

The ad goes on to describe the product, a board that fits in your PC.
The company is Motron Electronics, Eugene OR. Write or call for price.

What I can't tell from the first sentence is if it means *every single*
xmitter has a unique one, or just that a '950's is different from
an FT-1000, e.g. I would assume the former. And what is a 'phase-in'
characteristic?

Pretty wild if true. Wonder if it only applies to digital-synth rigs?
Any DSP or RF types care to comment? I just do devices....

Congrats on the new license!!! I'm new to amateur radio also; it's
great fun.

PNC> BTW: what ITU region is the US in?!).

Region 2.

PNC> In addition, does anyone have any particular suggestions for starting
PNC> equipment, etc...?

Buy used. There's lots out there, although 2m handhelds seem a little
scarce. See if you can meet some members of a local 2m repeater club
and tell them you're looking for equipment and advice. I've found
everyone very, very helpful and gotten invaluable advice on what to
buy and what not to buy.

PNC> I would like to do something with 2-meters, since that seems
PNC> really popular, but I am unsure of anything else.

I have HF privileges but have still found 2 meters a great place to
start because of the ease of making contacts and the lower starting
investment.

PNC> Now if the call will only get here! (BTW... what is the current
PNC> license delay [my test was administered by ARRL/VEC] ?)

I just received my Tech Plus upgrade on April 19. It arrived after a
little over a three months wait.

PNC> (I know, I know... LEARN THAT CODE! [I am, but slowly... time
PNC> restraints! :)])

Learn the code ;-) It's a very nice feeling of accomplishment and even
after you get HF privileges, if you only work phone, that gives you a
very small slice of the spectrum. CW at least gives me more bands to
work until I get my general.

Have fun!

More spectrum I agree with, but not the 10M band, propagation is to good.

> Well, according the "Purpose of Amateur Radio" as codified in part 97, the ha
> bands are not "citizen's bands". The amateur allocation's scope and purpose

That is what it says on paper, but take your scanner and listen to your
local 2M repeater, and you will see 2M is just like cb, but on a higher
level. (very little technical conversation, mostly chit chat.)

As for packet, that is an even bigger fraud of spectrum, their is no
"Experimentation" going on, just users taking advantage of the available
spectrum to setup their own personal or club packet bbs systems. The
computers are BOUGHT, the transmitters are BOUGHT, the antenna is BOUGHT
and the software is BOUGHT (or copyed) WHERE IS THE EXPERIMENTATION!

> Citizen's bands should be large radio parklands of spectrum set aside for
> general citizens to use without any content restrictions. This spectrum
> should serve for personal communications, personal business, and low-level
> broadcasting. Most importantly, this "parkland" should be available to

I'm not sure about 'Low level broadcasting', perhaps a section of your
proposed band could be set aside for that, as for personal & buisness,
they would need seperate area's as well. (In Australia we have a 40 Ch.
UHF CB service as well as HF 27 Mhz) and the private users are always
telling the buisness users 'Where to go'. But I still agree with your initial
principal.

> These proposed citizen's bands would not be anything like the 11m band we
> have today. It can be easily argued that the problems with that band have

How can you say that? Congestion is only 1 of a number of problems 11M
faces todays.

This conversation reminds me of an artical I saw a few years back, (can't
remember where) stating that the spectrum costs nothing to provide,

nothing to maintain (not policing, the other type), and it never wears
out. So why do governments use it as such a money making tool?
To buy 12.5Khz of spectrum in a built up city, can cost over A$1M, who
should I make the cheque out to "GOD" ?

My experiences as a no-code ham have been good, even while visiting a metropolitan area (Los Angeles), I seem to have been welcomed with open arms (ears?) by everyone except the no-code bashers on Usenet.

This latest thread about 2m=CB has gotten me thinking. How is using an outdated mode of communications (ie: CW) to do contesting, ragchews, and signal report exchanges to get that coveted QSL card so much more "experimental" or justified than a 2m rag-chew? It seems to mee that there's room in amateur radio for everyone, whether they're hard-core hardware hackers into building their entire system themselves (I can only assume you're not reading handbooks to get your design plans) or someone interested in doing public safety comms, learning about simple antenna design, writing packet software, contesting, or whatever suits their fancy.

I read this newsgroup for more than two years prior to taking the exam and getting licensed, and the cw bigots didn't scare me away. I can only hope that other newcomers aren't scared away from this great hobby.

Well both the ft470 and alinco are very popular handhelds in my radio club.
However lately most of the new ht puchases have been the alinco 580.
i find both to be good radios. If you can live without the 800 mhz
and am air(I don't think 470 does am air, corrections invited), I'd
find the prospect of an ft470 for 150 marks less to be the better bargain.

Has anyone seen a kit or plans for an amplifier for a Rabbit video/audio transmitter? I would like to find one if one can be had. I've heard that Pauldon assc. Makes one but I enjoy building things. I'm also interested in building one for the Micro atv transmitter that was issued in "73" magazine. I have info for the PA-5 amp that was made for the Micro Atv xtmr. But, again I would like to make my own. Any help would be appreciated. Thanks de Don N6NLX./

Greetings all. I'm the happy owner of a Talon TSi AWD, though I love the car, it does present some unique problems with regard to the mounting/use of mobile units. I'd love to hear how any owners of talons/eclipses/lasers have mounted their mobile units. All these cars have essentially the same dashboards, so what works for one should work for all.

Thanks,
Jean

You are correct. The 470 will not receive air (no AM) nor will it go
up to 800 megs (although I can set the VFO from about 60 to 1450 megs,
it will realistically do oh say ~135-173 and 420-470 or so). However,
it is a really nice, solid rig. I love it, and I love it to the point
that it would be difficult for anything to convince me to drop Yaesu.

That said, my next comment is easy to guess. I would recomment the
FT-530 over *either* the Ft-470 or the alinco 580. I doubt that it
costs much more than either (my observations have been that the 530
is the same price, give or take, but that the 470 is on sale
everywhere, while the 530s sell out at whatever price the stores
charge--last time I was in HRO they had only their counter demo on
hand). It is smaller, and has all the rough edges of the 470
smoothed out, not to mention a lot of really slick new features.
I feel that it is the best value in an HT on the market today.

Comments welcome, flames to /dev/null

This time I was busy with other things but last year I heard them on a
PRO-34 with a mediocore magnet-mount scanner antenna stuck on the window
airconditioner at my apartment. I got them on tape but never did send
for a QSL.

1227. * Aland Is. Pedition *

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-21 08:08:51 UTC
From: oh3mep@lehtori.cc.tut.fi
Message-ID: <1r2vej$o17@cc.tut.fi>
Source record: 282890

Aland Islands DX-Pedition 3rd - 11th of April 1993

During our week of stay on Brando island (OHC-001, IOTA EU-02, LOC KP00MI) we made only abt. 6400 qsos on 1.8 Mc - 50 Mc. Conditions were bad, we had heavy aurora and no propagation on upper bands. We had also minor troubles with our equipments, but no serious damages. Our main purpose was to operate on WARC-bands and 15m RTTY, but we got only 414 RTTY qsos and 1494 qsos on WARCs.

SOME STATISTICS:

Continents: Countries: Modes:

North America 12.3 % CW 104 CW 67%
South America 2.1 % SSB 84 SSB 26%
Europe 67.4 % RTTY 51 RTTY 7%
Asia 16.8 %
Africa 0.8 % TOTAL 137
Oseania 0.5 %

We operated all with our own calls (OH0LQK, OH0MEP, OH0MFP, OH0MYD and OH0NLP), I also activated our clubstation OH0/OH3NE on 50 Mc (65 qsos on aurora).

QSLs via each operators homecall in OH3-land or via P.O.Box 179, 33101 Tampere, Finland, EUROPE.

I will make short trip to same qth on 15th to 17th of may 1993 with another group. No details available yet, but that will be very limited pedition, we will be operating only CW & SSB, no digital modes this time.

TNX ES CU ALL AGN!

A lot of this depends on where Bill is wanting to go. In Berkshire, where (I think) Peter is located, it is true to say that 2m is _extremely_ busy and I am willing to believe that 70cm is busy too.

In Scotland, where I live, 2m is busy enough that you can normally get a contact on a repeater, and 70cm is all but deserted, apart from packet (BTW, that's 144.650MHz on 2m and 432.625 in my area - both AX.25) and the novices. They hang around the repeaters (we have a +1.6MHz repeater shift on 70cm). I've got to say that the standards of politeness and good radio practice are generally higher amongst the novies than any other group of amateurs I've heard!

Hope you enjoy your holiday, Bill!

1231. Re: X-tal filter 75 MHz

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-21 09:34:21 UTC
From: dstock@hpqmoca.sqf.hp.com
Message-ID: <C5tuLB.9pz@hpqmoea.sqf.hp.com>
Source record: 282894

75MHz has been used as a first IF for up-converting HF receivers, so filters have appeared in various suppliers catalogues. As these fit before the main selectivity, the bank of different bandwidth filters in a typical receiver, they are designed to be wider than the widest mode. 20kHz bandwidth is about the narrowest I've seen.

A 2.4 kHz filter at 75MHz would be unusual, and therefore more involved to design, if you could find a manufacturer prepared to try. I would expect this to be incredibly expensive.

You could have a go yourself. there were some excellent articles in RADCOM several years ago on ladder filters using crystals on fundamental modes, and some not really deep enough articles in QST more recently. It might be interesting to extend this work to overtone modes. A single conversion receiver to a high IF could be very interesting....
A narrow first IF filter could also be used to improve a receiver with a mediocre second mixer, and a famous second mixer intermod problem. Any prize for guessing the model number?
If this is your problem, improving the second mixer could be an alternative approach.

If anyone requests clues, I'll dig out those articles and list them.

Hope this helps a bit
David GM4ZNX

1232. Information on Hamming in U.K.

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-21 10:09:12 UTC
From: pdu@unixa.nerc-barry.ac.UK
Message-ID: <2569.9304211009@ua.nrb.ac.uk>
Source record: 282910

Hi there Bill,

Well, the 2m band goes from 144.0 to 146.0MHz. 144.3 is SSB calling, 145.5 is FM calling. Packet is on 144.625, .650, and .675. With a maximum of 25W when unattended. 144.625 is theoretically dedicated to TCP/IP. I have an internet number but am having problems getting NOS going. Repeater Outputs start at 145.6, and the inputs at 145.0 (-600KHz). Repeater access tones are 1750Hz, but are starting to be changed over to CTCSS.

There is no 220MHz band in the U.K.

430MHz goes from 430.0 to 440.0. I'm not very active on this band, apart from packet which is on 432.625, 433.625, 432.650, 433.650, 432.675 and 433.675. We share 70cms with the military, so they have some frequencies, although off hand I don't know which. We've *JUST* got unatended packet operation on all of the packet frequencies.

As for bringing your equipment into the country, well I don't think equipment that transmits outside our 2m band (as yours will) will be allowed, but you can always ask the RSGB, or the Radiocommunications Agency. I think your 70cm band is the same as ours though, so that should be okay. (please no flames if I'm wrong on that one!)

Hope this helps.

73,

Paul, GW7KES.

1236. Mass QSO Party Rules

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-21 11:50:39 UTC
From: sehrlich@lynx.dac.northeastern.edu
Message-ID: <1993Apr21.115039.20872@lynx.dac.northeastern.edu>
Source record: 282903

MASSACHUSETTS QSO PARTY '93

I. OBJECT

The object of the Party is to promote on-air competition among all radio amateurs, both within and outside of Massachusetts.

II. TIME

The second full week-end in May (May 8-9), from 1500Z Saturday to 2100Z on Sunday. Stations are only permitted to operate 24 hours within the 30 hour period.

III. GENERAL RULES OF OPERATION

1. The use of spotting nets is allowed.

2. Operation will be on MF, HF, VHF and UHF except on 30 meters, 17 meters and 12 meters. All modes are permitted. Modes consist of digital (CW, RTTY, ASCII, AMTOR, Packet), video (SSTV and ATV) and phone (SSB, FM, AM).

3. The use of land-based voice repeaters for contest QSO is not permitted.

4. Digipeater, node, land based ATV repeater and amateur satellite transponder operation is allowed.

5. Work stations once per band per mode per Massachusetts county.

6. Work the same station on a different band for a new multiplier.

7. Mobile/portable operation is permitted and encouraged.

8. Massachusetts stations may work any stations, non-Massachusetts stations may work only Massachusetts stations.

IV. CATEGORIES:

Categories 1 to 4 are for Massachusetts stations only.

1. SINGLE OPERATOR / SINGLE TRANSMITTER: (SINGLE/SINGLE)

A single operator who performs all transmitting, receiving and logging functions.

2. MULTI OPERATOR /SINGLE TRANSMITTER: (MULTI/SINGLE)

A station using a single transmitter at a time and obtaining assistance including relief operators, loggers etc.

3. MULTI OPERATOR / MULTI TRANSMITTER: (MULTI/MULTI)

A station operating multiple transmitters with multiple operators at the same time, when all transmitters are located within a 300 meter diameter circle. All "Bonus Point Club Stations" are encouraged to participate in this category.

4. NON-FIXED STATION: (MOBILE/PORTABLE)

A station capable of being operated from more than one location. This is to encourage operation from more than one county. The log should clearly indicate which county the contacts were from.

5. NON-MASSACHUSETTS STATION:

A station operating from outside the state of Massachusetts.

V. SUGGESTED FREQUENCIES

CW: 1810 KHz, 3550 KHz, 7050 KHz, 14050 KHz, 21050 KHz, 28050 KHz, 144.070 MHz, 432.090 MHz
Novice: up 30 KHz from band edge

SSB: 1850 KHz, 3890 KHz, 7290 KHz, 14270 KHz, 21390 KHz, 28390 KHz, 144.220 MHz (SSB) 146.550 MHz (FM), 432.150 MHz (SSB), 446.000 MHz (FM)

VI. EXCHANGE

1. Massachusetts stations:
Send signal report and county.
example: "59/9 Middlesex"

Bonus Point Club Station:
Send signal report, county plus "club station" on phone, or "/c" on non-phone.
example: "59 Middlesex club station" or "599 Middlesex /c"

2. Non-Massachusetts stations:
Send to Massachusetts stations only whichever applies:
US: Signal report and state
CANADA: Signal report and province/territory
DX: Signal report and DXCC country (excluding US, Canada, Alaska and Hawaii)

VII. POINTS

1. Massachusetts stations:
Count one (1) point per phone QSO.
Count two (2) points per non-phone QSO.
Count fifty (50) points for Bonus Point Club Station regardless of mode.

2. Non-Massachusetts stations:
Count one (1) point per phone QSO with any Massachusetts

station.
Count two (2) points per non-phone QSO with any Massachusetts station.
Count fifty (50) points for Bonus Point Club Station regardless of modes.

VIII. MULTIPLIERS

1. Multipliers for Massachusetts stations:
The total number of Massachusetts counties, states (excluding Massachusetts), VE province/territories and DXCC countries (excluding US, Canada, Alaska, Hawaii) worked on each band.

2. Multipliers for non-Massachusetts stations:
The total number of Massachusetts counties work on each band.

3. Miscellaneous:
Maritime mobile contacts shall be counted as a QSO, but not as a multiplier.
Washington DC contacts shall be counted as a Maryland QSO.

IX. FINAL SCORE

Multiply the sum of QSO points by the sum of multipliers worked on each band.

X. LOGS

All logs must be postmarked no later than 30 days after the end of the contest.

For purposes of clarification, logs must show the mode of operation and the county, state, province/territory or DXCC country.

The rest periods should be clearly indicated in the logs.

Novices and Technicians should clearly indicate their license class to be eligible for special awards.

Dupe sheets are required for stations submitting more than 100 QSOs.

Logs with more than five percent error will only be accepted as control logs.

The logs should be sent in a printed form.

Send logs to: Massachusetts QSO Party,
Boston Amateur Radio Club,
PO Box 15585, Kenmore Station
Boston, MA 02215.

XI. AWARDS

1. An award will be given to the highest scoring station in each of the five categories.

2. An award will be given to the highest single/single scorer in each Massachusetts county (except for the county of the single/single winner).

3. An award will be given to the highest scoring station in each state, Canadian province/territory, and DXCC country.

4. An award will be given to the highest scoring Massachusetts Bonus Point Club Station.

5. An award will be given to the highest scoring Novice or Technician class station in each category in the state of Massachusetts.

6. Certificates will be awarded for the second and third place winners in each category.

1239. Re: Motorola MICOR

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-21 12:20:56 UTC
From: sbrown@charon.dseg.ti.com
Message-ID: <SBROWN.93Apr21062056@charon.dseg.ti.com>
Source record: 282906

I just got through moving a couple of MICORs to 2M so I may be competent to comment on this.

The MICOR is a late 70's vintage commercial rig made by Motorola. Think bulletproof with the attendent size and weight. I haven't weighed one but I'd guess they weigh about 35 lb.

The "head cord" that is "bad" is the control head and associated equipment, without which the radio is useless. You _could_ cobble something together to replace it but it would take a lot of time and trouble. The radio is designed in such a way that the main part of the radio, the part J. Fall has, goes in the trunk of your car. The control head, on which are located the on/off switch, the squelch control, the volume control, and the frequency selector, if multi-frequency, mounts on your dash or where ever, and the microphone and speaker plug into it.

The radios convert to 2M relatively easily and should last forever.

Hope this helps.

Hi,
I have a quick question about AM modulation systems. I wondered why most broadcast transmitters modulate the final RF stage? Are there any disadvantages to modulating stages ior to the final RF stage.
Best Wishes,
Henry.
Email u1066579@csdvax.csd.unsw.edu.au

1242. PacketCluster-Sysops welcome!

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-21 12:53:42 UTC
From: gross@ifsws1.sozialforschung.uni-stuttgart.de
Message-ID: <1r3g4m$jka@info2.rus.uni-stuttgart.de>
Source record: 282902
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.packet

I would like to invite all Sysops of PacketCluster nodes to our email
discussion list which discusses all about the PacketCluster Software.

What you have to do to get in it ?

First of all - you need to have an email adress.

Send a message to listserv@ifsws1.sozialforschung.uni-stuttgart.de
with a message body of "help" - this is to show you the commands
this mailing list server supports.
Then, send a second message with a message body of
"subscribe packetcluster firstname lastname (callsign)".
(Please note that it is _message body_ and not _subject_!)

so if you are Dick Newell and your callsign is AK1A,
the line would be:

subscribe packetcluster Dick Newell (AK1A)

Also there is an anonymous FTP server to supply
PacketCluster-related software, information files and databases.
The FTP server also has a directory for G8BPQ and contesting stuff.

FTP to 141.58.162.1, login as "ftp", choose any password.

Then "cd /pub" - that's where the things are.
Feel free to upload files to /pub/uploads, don't forget to leave a *.txt file
to describe your upload.

ARRL vs NAB

The ARRL has taken a stand on the legality of fines used by the FCC to enforce its rules. The National Association of Broadcasters says that these fines are illegal. The ARRL says that the FCC and not the broadcasters is correct. This is a late breaking story.
The Press Release from the ARRL tells the story better than anything that we might be able to add. We quote:

"Dateline Newington, Connecticut. April 2nd, 1993. The American Radio Relay League announced today that it has filed a motion to support the Federal Communications Commission in a lawsuit filed by broadcasters who seek to overturn the way FCC enforces indecent broadcast prohibitions through financial penalties. The ARRL says that a decision in favor of the broadcasters could harm the FCC's ability to combat indecency on amateur radio frequencies.
In a motion filed in United States District Court of the District of Columbia on March 16, the ARRL asked to participate in a suit brought by Action for Children's Television and 20 other broadcasting and public-interest organizations. The broadcasters allege that monetary forfeiture proceedings used by the FCC in indecency cases violate Constitutional due-process and free-speech protections. Since prompt judicial review of forfeiture orders is not available, the broadcasters say, they must engage in self-censorship and claim that the FCC has used this process to punish or threaten them in violation of the Communications Act of 1934. The broadcasters have asked the Court to prohibit the procedures now used by the FCC to rule on alleged indecency violations under 18 U.S.C. 1464; to enjoin FCC from initiating or conducting forfeiture proceedings under 47 U.S.C. 503(b) for alleged violations of 18 U.S.C. 1464; and to order the dismissal of all indecency forfeiture proceedings under 47 U.S.C. 503(b) currently pending before the Commission. The ARRL has requested to be permitted either to intervene in support of the FCC, or, alternatively, to submit a brief Amicus Curiae in support of the interests of radio amateurs." -- end quote.

In a statement that accompanied the ARRL release, the Leagues president George Wilson, W4OYI had his own thought to add. Wilson who is himself an attorney said -- and again we quote --

"While the relief sought by the plaintiffs specifically concerns the Broadcasting Service, we're concerned that it might also have the effect of harming FCC efforts to enforce rules in the Amateur Service that have been strongly supported by radio amateurs." End of quote.

By taking this action the American Radio Relay League seems to be telling Broadcasters and other commission licensed services that ham radio operators do not think that the FCC Rules and Regulations infringe in any way on their freedom of speech. That hams want to be regulated and are more than willing to live within the terms of their licenses and the rules that guide them. More on this next week.

*****
ARRL DIS-ACCREDITS VE'S

The ARRL Volunteer Examiner Coordinator has temporarily suspended the accreditation of eleven of its Volunteer Examiners. This, pending an investigation of what it calls alleged irregularities at two testing sessions in Stockton and Newark California in November of 1992 and in February of this year. According to the ARRL's VEC Administrator Bart Jnanke, KB9NM, the so-called irregularities in the two exam sessions involve only the Morse Code testing of forty six new applicants and another forty six upgrades.
A spokesman for the FCC says that he expects action will be taken in regard to the examinees who upgraded their licenses at the November testing session in Newark, California. In the past the FCC has simply invalidated the test results of suspect sessions and has directed that applicant take new tests within a specified time period. The commission indicates that some action involving the February 1993 examinees from the Stockton session would probably follow.
The ARRL says that the same Volunteer Examiners have also held sessions in Union City and San Jose, California, but did not comment if any of these sessions were under scrutiny by it, or the FCC.

*****
NAL'S CANCELED AGAINST CALIFORNIA AMATEUR RADIO SCHOOL VE'S

Notices of Apparent Liability to Monetary Forfeiture issued against several Volunteer Examiners in the abortive 1991 sting investigation of the ham radio testing procedures at the California Amateur Radio School have been dropped. On March 16th, FCC Special Services Division Chief Robert McNamara notified Attorney George L. Lyon Jr. that the Commission had canceled the NAL's that the agency had issued against several of his clients who were members of the Volunteer Examination team. Also, that a fine levied against another member of the VE group was being reduced to a minor regulatory infraction carrying only a $100 forfeiture.

Attorney Lyon had been retained by the VE testing team after the now discredited ham on ham investigation by members of the Los Angeles Official Observer Corps had indicated the possibility of wrong doing by the school and those providing the testing. The investigation lead to the FCC issuing orders to suspend and revoke the Amateur Radio licenses of school proprietor Sandra Crane N6TFO and instructor Charles Pascal WB6CIY.
But last fall, FCC Administrative Law Judge Joseph Chachkin overturned the suspensions and revocations. He ruled that the government's case was flawed. He then worked out a Consent Agreement with Pascal and Crane.
After successfully defending N6TFO and WB6CIY, Attorney Lyon took on the problems of the VE Team. He argued that based on the evidence developed in the Crane and Pascal case, that it was evident that the VE's had been wrongly accused. Lyon argued that the fines against them violated the terms of the governments own Administrative Procedures Act. That they were issued based on an un-substantiated and now discredited complaint from outside of the Amateur Auxiliary Program, and therefore should be canceled.
While the FCC responded that it did have the right to accept complaint from any part of the citizenry, it also agreed that it was proper to dismiss the NAL's based on the facts brought out in the Consent Order decision in the Crane and Pascal case.
And, as we said earlier, only one VE faced any form of punitive action and even here the FCC reduced the amount of the NAL to $100. The FCC said that this was based on the admission and willingness to accept responsibility for what the Commission termed as being a shortfall in a single Morse Code Exam.
McNamara's letter to Attorney Lyon said that based on the explanation the ham had provided, the violation itself was being adjusted downward because of that amateurs' willingness to show good faith.
This does not end the matter. There are still several other VE's waiting to hear from the FCC about the Notices of Apparent Liability served on them in the long running case.

*****
SAREX DELAY

A sticky valve forced the last minute abort on the space shuttle Columbia recently and NASA has reconfigured the entire shuttle schedule as a result.
Three SAREX missions in the immediate future are affected. The SAREX Working Group now expects STS-56 to be next up. The space-ship Discovery should launch around the end of the first week or ten days in April going up very early in the morning around 05:30 UTC for a nine day flight with four licensed amateurs on board. They will fly in a high inclination orbit which should take them over all of the United States several times a day. Look for voice, packet, slow-scan and fast-scan ATV.

NASA hopes to launch STS-55, the delayed Columbia, in late April with four amateur operators and two ham stations on board. The American hams will operate SAREX from the orbiter while the German's will use the SAFEX European station from the ESA Spacelab.
Finally, STS-57 with Brian Duffy, N5WQW on the shuttle Endeavour should launch sometime in May.

*****
SUPER RADAR TO STUDY EARTH FROM SHUTTLE

The same space shuttle that frequently carries manned Amateur Radio systems into space will soon play host to the worlds most powerful earth resources radar study system. A consortium consisting of the United States, Germany and Italy have built this advanced new system that has the capability to view the Earth through clouds, jungle foliage and desert sand to gauge planetary damage.
The $300 million device will make three shuttle flights in the 1994 through 1996 time frame and is expected to produce high quality color images of the most inaccessible areas of the Earth. It is expected to yield important information about the way in which air pollution, population development and natural factors are influencing life and climate on the planet. Targets will include volcanoes in the Galapagos Islands, soil moisture in Oklahoma, vegetation levels in the Amazon, the condition of Pine Forests in North Carolina and debris deposited on the Earth's crust in California's Death Valley by ancient floods.
The one-hundred and eleven ton radio system was unveiled on March 23 by NASA, the German Space Agency and Italian Space Agency. The United States paid fifty percent of the cost of developing the system.

*****
ARRL SCHOLARSHIPS

The ARRL Foundation says that it plans to administer sixteen scholarships for the 1993 to 1994 academic year. With several of these being multiple awards, the actual number presented will probably exceed twenty two. The scholarship awards range from $500 to $2000 with ten of these being above the $1000 level.
The ARRL Foundation scholarship awards program is open to all, licensed radio amateurs pursuing a course of study beyond high school level Some of the awards require membership in the League while others carry state, geographic or academic preferences.
For further information and an application please write to the ARRL Foundation Scholarship Program, 225 Main Street, Newington Connecticut 06111.

*****
AERO MOBILE

The ARRL Awards Committee has changed the rules, starting with the 1993 International DX Contest. This change will allow US and Canadian stations to work aeronautical and maritime mobile stations outside the US and Canada for contest QSO credit.
There is one catch. The league says that aeronautical and maritime mobile QSO's will not count for any multiplier credits. This change will however allow stations in the DX Contest to log QSOs with aeronautical and maritime mobile stations.

*****
DX

In DX, word from the ARRL that QSL cards for operations by Iranian amateurs for QSOs on or after August 20th, 1988 are now being accepted for DXCC. Previously rejected cards may be returned for DXCC credit.
Also, reports say that DL8NBE, will be traveling and operating from the South Pacific during April 10th thru May 5th. Activity will be on 160m-10m including the WARC on CW and SSB. Hans plans most activity on WARC bands. Some of the callsigns he may be using include ZK1NB and ZK2NB.

*****
AMATEUR COMMUNICATIONS CHANGE

In the business scene, word from Miami that Ernie J. Giro has replaced Lourdes Seamoan as the Assistant Publisher of Amateur Communications and All In Communications Magazines. Both magazines are published by the Miami based Communications Publishing Group and are unique in that two editions are released each month; one in English and the other in Spanish.

*****
HAMVENTION

A reminder that the Dayton Hamvention is now less than a month away. For the few of you who are not aware, Dayton is probably the worlds largest annual gathering of radio amateurs. It attracts between 30,000 and 40,000 attendees every year. It is slated for April 23rd through the 25th at the Hara Arena in Dayton, Ohio.
This year Newsline will be hosting two seminar sessions at the Hamvention. Look for us on Saturday the 24th at 2:45 in the afternoon at the Media Relations forum. On Sunday the 25th, we will have a special treat. Its called the Westlink and Newsline Stories and will feature the four principals behind ham radio news reporting gathered together for the first time. These people are Ham Radio Report former editor Joe Schroeder W9JUV, Westlink Radio Network founder Jim Hendershot WA6VQP, Westlink Report Editor and Publisher Burt Hicks WB6MQV and our own Newsline Producer Bill Pasternak WA6ITF. That session begins at 9:30 am in Room number 1 at the Hara. We hope to see you there.

[817]
COMMISSION UPHOLDS $8000 NAL

A non ham who calls himself an Anti-Castro freedom fighter has been ordered to immediately pay up an FCC imposed fine for transmissions he made in the forty meter amateur band. On March 22nd, the Commission upheld its earlier order that Roberto Pizano of Tampa, Florida forfeit $8000 for violating the Communications Act by operating an unlicensed radio station. Pizano never denied the charge. Instead, he admitted responsibility for conducting the unauthorized transmissions as part of what he calls a political propaganda efforts against the Castro regime in Cuba. This in association with a group of Cuban former prisoners called the Federacion Mondial de Ex-presos Politicos Cubanos.

Pizano sought reconsideration of the amount of the forfeiture in light of the Commission's downward adjustment criteria. He argued that the public interest in supporting a Cuban freedom-fighters dedicated to liberating his country should outweigh the Commission's regulatory interests. He also argued that levying a forfeiture against him would be tantamount to levying it against the group and was therefore unjust.

But the FCC looked at it in a very different way. They told Pizano that they had no interest in his group or its political agenda. That the Commission's responsibility is administering radio law. It told the illegal broadcaster that in determining the amount of a forfeiture, the Commission considers the nature, circumstances, extent and gravity of the violations. And with respect to a violator that it also considers the degree of culpability, any history of prior offenses, ability to pay, and such other matters as justice may require. Pizano had acknowledged his culpability, but argued that his actions were justified because of the goals of the organization on whose behalf he claimed to be acting.

The Commission said that Pizano offered no evidence to support his assertion that he was totally unable to pay any fine. They said that the only figures he provided addressed the Federation's financial standing and not his personally. They said that it is Pizano who is liable for the forfeiture, and not the anti-Castro political group.

The FCC also said that while Pizano had no prior history of violating the Communications Act, they feel that the evidence clearly indicates a continued predisposition on his part to do it again. Taking all of this into account in reviewing the case, the commissioners fully agreed that no downward adjustment to Pizano's fine is warranted, and none will be made.

If Pizano wants to appeal the matter further, he will have to hire a lawyer and fight it in the federal courts. Meanwhile, you can be fairly certain that not only will the FCC be keeping an ear open for any more unauthorized broadcasts from Roberto Pizano. So will all the hams who regularly use the 40 meter amateur band. Word is that it was hams who alerted the FCC to Pizano's illegal broadcasts making him easy to find and prosecute.

*****
ARRL PRAISE

Words of praise from all over the amateur radio community are beginning to come in for the leadership of the American Radio Relay League over their decision to join with the FCC in trying to end the use of potty-mouth language on the airwaves. As reported last week, the National Association of Broadcasters say that the commission has no right to fine broadcasters for transmitting objectionable language. The broadcast community claims that such fines are a violation of their right to freedom of speech and they are suing the FCC to get the practice stopped and to have all outstanding fines canceled.
The ARRL says that it is afraid that such a win by the broadcast community would spill over into ham radio, making it impossible to enforce rules against the use of indecent language in the amateur radio service. Last week the league announced that it was petitioning to join with the suit on the side of the FCC and that word has made a lot of leaders in the amateur community stand up and say well done. One of these people is the president of the National Amateur Radio Association, Donald Stoner, W6TNS.
Don Stoner, W6TNS is not the only leader in the Amateur Radio community coming to the support of the ARRL and the FCC. More on this story next week.

*****
BRANTLEY LICENSE SUSPENDED

Still with enforcement matters comes word that James L. Brantley, K6KPS, of Los Angeles, California has agreed to a one year license suspension in-lieu of paying an $8000 Notice of Apparent Liability to Monetary Forfeiture issued against him by the FCC last year.
On June 3, 1992 Brantley was fined $7000 for malicious interference to other amateur stations and an additional $1000 for making one-way transmissions. The commission alleged that K6KPS had made one-way repetitive transmissions that consisted of calls that were not actually intended to establish two-way amateur radio communications.
After receiving the notice, the FCC says that Brantley replied that he could not afford to pay an $8000 fine. So, he

was given the option of the years suspension in its place. K6KPS reportedly has mailed his license to the FCC which will hold it for the period of suspension. The FCC said that it obtained the evidence against Brantley from complaints by other area radio amateurs and by its own mobile unit and field office monitoring.

*****
SAREX STS-56 IN ORBIT!

The Space Shuttle Discovery lifted off on April 8, at 0529 UTC (01:29 EDT) into clear Florida skies. The Shuttle carries NASA's Atmospheric Laboratory for Applications and Science-2 (ATLAS-02), and has been designated a ''mission to planet Earth.''
The Shuttle Amateur Radio EXperiment (SAREX) flies as a secondary payload. The 5 Amateur Radio-licensed crew on board Discovery will use SAREX to communicate with hams and student groups around the world. Seventeen schools will get a chance for a scheduled QSO with the astronauts.
Worldwide voice and packet downlink frequency is 145.55 MHz. The downlink is a receive only frequency. Voice uplink frequencies are 144.91, 144.93, 144.95, 144.97 and 144.99 MHz. Voice uplinks in Europe are 144.70, 144.75 and 144.80 MHz. Packet uplink is 144.49 MHz. Call sign for voice QSOs will be KB5AWP. Use W5RRR-1 for packet.
Listen to Goddard Amateur Radio Club station WA3NAN for rebroadcast of all Shuttle air-to-ground communications on 3.86, 7.185, 14.295, 21.395, 28.65 and 147.45 MHz.
All amateurs are reminded to be tolerant and cooperative of each other's use of frequencies during SAREX activities. SAREX operators should listen before transmitting, and only transmit when the shuttle is within range. Other users should remember that passes are short and occur only a few times each day of the mission. Any reports of actual interference experienced on shuttle frequencies by SAREX participants and other users, and background information, should be sent to ARRL.

*****
FCC SAYS NO TO EXPUNGE REQUEST

The FCC has denied a request by an attorney for Richard A. White Jr., KA3T, to have his record of correspondence with the Commission withdrawn and expunged. As you may remember, White was one of eight packet bulletin board operators to receive a Notice of Violation in January, 1991, for forwarding an all USA packet radio message which the FCC called a business message. The Notices of Violation required that the Packet Bulletin Board Sysops explain the circumstances of the violation and describe what steps they would take to prevent future violations. White responded through his lawyer and in April of 1991 and promised that no all USA messages would be sent by his station without prior screening to ensure compliance with the

rules.
But White was still not satisfied. He wanted his record cleared through his lawyer he sought to have the correspondence between himself and the FCC removed from his records. White's lawyer argued that because no action against his client resulted from the notice that was entitled to an untainted record free of any question concerning the operation of his station.
But on March 22 the FCC flat out denied White's request. They said it was, denied that request. They said that the request was unwarranted because the commission does not consider a licensee's file contaminated merely by the presence of an exchange of correspondence between the Commission and the licensee. The FCC called the exchange between it and KA3T fruitful, in that it shows White as a licensee who takes seriously the responsibility for station control. It's unknown if KA3T will accept this FCC explanation or if he plans to file further appeals.

*****
NEW FCC CHIEF

Look for President Clinton to nominate Antoinette Cook to replace James Quello as Chairman of the Federal Communications Commission. Cook is the staff council to the Senate Subcommittee on Communications. Last year, she was instrumental in pushing legislation through congress that brought the cable television industry back under federal control. According to the New York Times, Cook is believed to favor reinstating the Fairness Doctrine that requires broadcasters to give equal time to opposing points of view on controversial issues. If nominated and confirmed, Cook would be the first woman and the first black to head up the FCC. She would also be one of the youngest FCC Chairman in the history of the agency. Antoinette Cook is only age 36.

*****
EUROPEAN REPEATER CLOSES

From the international desk comes word that Englands' Central Birmingham VHF repeater GB3BM has gone off the air due to site security problems. Word is that the repeater trustee has relinquished the frequency pair and it will be a while before another machine takes its place.
Why is this important? For two reasons. First off, many US hams visit the United Kingdom regularly and this information is vital to them. But more important it shows the difference in the way re-assigning a repeater channel pair takes place in different countries.
Unlike the United States, in the United Kingdom you cannot just rush out and put up a repeater on any vacant channel pair you choose. All repeater licenses are held in trust by the Radio Society of Great Britain. They assign the responsibility of

putting up and maintaining repeaters to interested groups or individuals. When a repeater trustee -- or keeper -- decides to relinquish a channel pair, it stays vacant until the RSGB reassigns it to someone else willing to put up a new system in the same area. This means that the same group of hams will always have a repeater on the same channel serving a given region of the country.

*****

[818]
HICKS/WLR SAY YES TO ARRL

Yet another leader in the Amateur Radio community has voiced support for the American Radio Relay League. This over an ARRL announcement to stand with the Federal Communications Commission and against the National Association of Broadcasters dealing with what many feel to be a rising tide of smut on the airwaves by making certain that the government can continue issuing fines for these violations.
As previously reported, the ARRL announced on April the 2nd that it was petitioning to join with the FCC in a suit brought against the regulatory agency by the NAB. It is a suit that is also supported by numerous civil rights groups. The NAB contends that FCC fines for broadcasting legally indecent language are civil rights violations. They want the practice stopped and all outstanding fines canceled.
But the ARRL sees a win by the broadcasters becoming defacto law in all services. This would mean that there would be no way to curb the use of indecency on the ham bands.
Since the League said that it was getting involved, a number of leaders in the Amateur community have come to the ARRL's side. The latest is Westlink Report publisher Burt Hicks, WB6MQV.
In a hard-hitting editorial appearing in the April 15th issue of his newsletter, Hicks said that he applauds the American Radio Relay League in taking a position in favor of what he terms human decency.
Hicks, who is the former President of the Ham Radio Business Council, the co-author of its petition to rid the ham bands of regulatory violators and a frequent Newsline anchor says that he decided to support the ARRL because he truly believes that the League is 100% correct in taking on this issue. He says that it is a fight for him, that comes right from the heart.
So far there has been nothing heard from anyone of consequence in the ham radio community opposed to the League's decision to stand shoulder to shoulder with the FCC.

*****
SALE OF AIRWAVES GAINS WIDE RANGING SUPPORT

A Clinton administration plan to sell the electromagnetic spectrum to the highest bidder as a way of increasing government revenues has gained conditional support from the industry and regulatory officials. While some government regulators did caution that any bidding process must provide the smaller businessman the ability to compete for this resource, they were generally in agreement that such a sale could help offset the rising federal debt.
Congress is currently considering legislation that would transfer some 200 MHz of government used spectrum over to the private sector for the development of emerging technologies like advanced cordless telephones, radio LAN's, worldwide paging systems, personal locators and other such devices. The House has already passed its version while the Senate still has its measure under consideration. Both versions do contain wording that would permit the allocation of some of the frequency bands by auction. While industry leaders see the transfer of this spectrum as a boon to the United States economy, several groups including the National Association of Broadcasters and the American Radio Relay League feel that the services they represent should be excluded from any competitive bidding of reallocated spectrum based on the services they provide. The ARRL is working toward inclusion of language in the final bill to either protect Amateur Radio from any reallocation or provide alternative spectrum if any reallocation of ham bands shared with the government takes place. NAB feels that the Television broadcast bands should be excluded because the FCC is aware that applicants for these frequencies must be based only on their fitness to serve their local communities.

*****
SIKES TO HEARST

The Hearst Corporation has hired former FCC Chairman Alfred C. Sikes to head up a new operating division responsible for new media and technologies. Sikes retired from the FCC on January 19 after almost four years as the head of the agency where he oversaw the early development of high definition television.

*****
STS-56 QSL Information

As we go to air, the latest SAREX space shuttle flight is coming to an end. So far, the scientists, the astronauts and hams worldwide are rating this as one of the best scientific and amateur radio flights ever. So, now is the time to begin thinking of sending the ham crew of STS-56 a QSL.
All radio amateurs and short-wave listeners who worked or heard the orbiting space station are invited to send their signal reports and QSL cards STS-56 QSL, in care of the Vienna Wireless Society, P.O. Box 418, Vienna, Virginia. Please remember to include a self-addressed-stamped-envelope. Non-US stations

should include the appropriate number of International Reply Coupons with your QSL request.

*****
WRONG NUMBER

The 1993 World Radio and Television Handbook has an incorrect number of the data-line of Radio Netherlands. In case you want to dial in, the correct number is your International Dialing Access plus the numbers 31-35-24-53-95. Data format is 300, 1200 or 2400 Baud CCITT or BELL tones, 8 bits, no parity and 1 stop-bit. The Radio Netherlands data line is very popular with hams and SWL's worldwide.

*****
UK HAM OF THE YEAR

In news from the United Kingdom word that the Radio Society of Great Britains Youth Services Coordinator Hilary Claytonsmith, G4JKS, has been named that nations Amateur of the Year by the magazine Ham Radio Today. The announcement was made at the 1993 London Amateur Radio Show and specifically notes her work as the RSGB's Project Year coordinator as the reason for her being named to receive this award. In addition to her position in Project Year, G4JKS is also a member of the RSGB Council and is active in the fields of EMC prevention and HF contesting. All this in addition to recruiting young people into the Amateur Radio hobby.

*****
PRODIGY HAMS WIN BATTLE FOR A BBS OF THEIR OWN

Hams who are users of the Sears/IBM PRODIGY Interactive network have won a year-long battle to again have a bulletin board topic area of their very own. On March 24th, hams signing onto the hobbies board area found a message from Hobbies Board Leader Marty Hale-Evans telling them that the company had finally agreed to reinstate a ham radio only topic.
The confrontation between Prodigy and the Amateur Radio community began last spring when the Prodigy corporate management issued a directive to rename the "Amateur Radio" area to "Radio Hobbies". Then Prodigy Hobbies Board Leader Kim Hazelrigg said that this letter reflected the nature of the board area and the way in which the Prodigy management felt it should be viewed. But hams felt slighted. They began a campaign of postings that insisted that the "Amateur Radio" title be returned, and also issued demands that all other radio related interests like CB, Shortwave Listening, scanning and the like should be kept separate. Day after day; week after week; postings appeared from hams nationwide that laid these twin demands at the doorstep of Prodigy with an added warning that the Amateur Radio community might abandon Prodigy completely and take their buying power with them unless the company capitulated.

It was not until Hazelrigg was replaced by Hale-Evans that
some glimmer of hope for the return of an all-ham radio board
began to show a glimmer of light. After being bombarded on-line
with several hundred requests on her first day at work,
Hale-Evans promised the radio amateurs on the Hobbies board that
she would personally bring their concerns to the decision makers
at Prodigy. It took a bit over three months, but she apparently
was successful in getting management to change its mind and split
"Ham Radio" into a separate board area. CB'ers, scanning
enthusiasts, SWL's and the like are now found under
the header "More Radio Hobbies."
And with this you think that the hams who use Prodigy would be
happy. Many are not. You see, Prodigy has announced that its
rates are once again going up.

1247. sorry looked for FAQ

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-21 14:20:14 UTC
From: dbasinge@indiana.edu
Message-ID: <dbasinge-210493090842@ds9.hper.indiana.edu>
Source record: 282908

I'm going to ask some basic questions. I'm interested in learning
more about amateur radio, and could not find a FAQ.

1. Are there different types of amateur radio (ham, shortwave, ...)
or are they all the same? And could someone describe them to me.

2. How much does the basic equipment cost?

3. What is this exam, and how do I got about studying for it and
taking it?

4. What amateur radio resources are there in Indiana (also Arizona
and Flordia, may move to one of these places soon)?

Thanks for any info,
Mike

Dave,

I could be wrong but look on the back of the meter face. One mfg. of rotors used to place the south-centered face on the back of the "normal" face. All one had to do was remove the two screws holding the face, remove the face being careful not to damage the meter needle and then turn the meter card over and re-install. Hope that was CDE....

As they say, "A structure will fail at its weakest point" ... But where is the weakest point?

I am curious to hear from anyone who has ever had a *guyed* tower come down in a storm, etc --- WHAT FAILED?

I will be putting up a tower soon and I am interested to know what are the most likely failure points that I should make sure to pay extra special attention to.

Please supply a BRIEF description of :
Tower make :
Height and antenna load :
Guy configuration (levels, wire size/type) :
What actually failed? :
What caused the failure (storm, estimated wind MPH, etc) :
Anything else unique to the failure :

Please e-mail your responses and I will post a summary if I get anything interesting worth posting. Please be brief. I may request additional information from you if necessary.

I am only interested in *GUYED* tower installations.

> : one of which is wuarchive.wustl.edu (pub/hamradio directory I think).
>

The actual directory on wuarchive.wustl.edu is mirrors/msdos/hamradio.

Note that wuarchive.wustl.edu is very busy in the daytime, and you
may not be allowed anonymous access.

Another site which has autoexam.zip and other ham radio software is
ftp.cs.buffalo.edu. It is not as busy, especially in the daytime.
The directory is pub/msdos/hamradio.

Remember to transfer the file in binary mode.

73 de Jim WX4D (jvm@aluxpo.att.com)

P.S. To the person who emailed me that you were having trouble:
my return email to you is not being delivered, and I don't know
how else to reply to you.

Try ftp instead of telnet.

See one of the FAQ (frequently-asked-questions) files for ham radio which
are posted periodically for details on how to do anonymous ftp. -de WX4D

> ... info about Micors ...

All that Steve says is true for the Mocom models as well. I think they use the same control head and cable. I acquired a few UHF Mocom 70's literally from the dumpster when a local ambulance company converted to a new system. I managed to acquire a service manual for the Mocoms from someone here on the net and decided they would be worth gambling $20 on (for a pair of crystals). When the crystals arrived, it took me about two hours of tuning and fiddling and the Mocom was on 70cm. The model I have puts out about 25w. I get great reports on it...the audio quality is super. The models I have are 4 channel without a preamp. As Steve said, they're extremely rugged and, by current standards, huge and heavy...although the control head isn't all that big. The other thing I really like is that they put out a LOT of audio on receive...more than 5W, I think. I've seen them at swap meets for $50-75. Keep in mind, tho, that crystals will run about $20 per channel, so factor that into the price.

It means you can transfer memories, functions, and basically the complete setup to another radio of the same type. I have a C528 which outputs the tones to the "ear" socket. I've tried many methods of playing it back (i.e. it would be nice to have an audio casette with different setups for different areas of the country) but it always corrupts the 528 requiring a reset.

Over the air, to another C528, it works faultlessly, taking about 2 minutes to transfer all settings to another radio. Just wish I could get it to play back again... suppose the only answer is to buy another C528!

ATTENTION AMATEUR RADIO OPERATORS AND BOY SCOUTS:

During June 19th-23rd we will be mounting a Special Event station to the St. Helena Lighthouse on St. Helena Island in northern Lake Michigan.

The purpose of the Special Event is to commemorate the 120th Anniversary of the commissioning of the lighthouse and to celebrate the end of a 6000 hour restoration project by the Boy Scouts and the Great Lakes Lighthouse Keeper's Association.

In addition to making contacts with any station for the Special Event we would like to make schedules with other stations so that the Boy Scouts working on the Lighthouse would have an opportunity to talk with other scouts from around the country.

Please call or write Earl Morse, KZ8E, at the following numbers for more information or to set up a schedule.

Message-ID: <C5uq6A.9un@cbnewsd.cb.att.com>
Source record: 282844
Cross-posted to: alt.dcom.telecom,rec.radio.amateur.misc

I am looking for a device which will generate all 16 (sixteen)
available Touch Tones for an application I have.
A portable device which can generate the extra 4 TT signals
over a calls' voice path would be great.

In some applications, there are phones which
have these buttons:

1 2 3 FO
4 5 6 F
7 8 9 I
* 0 # P

The FO, F, I, P buttons are used to specify urgency
of certain types of calls. The frequencies generated
by the FO, F, I and P buttons are what I need.

If you can let me know how I can buy (best choice) or
build (next best choice) such a device, please
respond to this newsgroup or call.

Thanks.

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-21 21:03:06 UTC
From: brian@ucsd.edu
Message-ID: <1r4cqa$h17@network.ucsd.edu>
Source record: 282828

Be aware that MOCOM-70 radios date from the early 70's (and late 60's) and are nearly impossible to get parts for. The most common failure in them is the PTT/ant relay, and it's a custom jobbie. Second most common in the UHF model is the tripler varactor.

If you plan on using one in a serious way, buy two and use the second for parts.

$25 is a typical swapmeet price without control group; expect to pay $10 to $20 for the control group (head, mic, speaker, cable) depending on how shiny and clean it is.

Don't plan on using a UHF MOCOM-70 mobile as a repeater; the varactor tripler stage is filthy by today's standards and your site neighbors will hate you. Fixing such a repeater with an axe would be justifiable.

> 9600/2400/1200 baud 8 bit NO parity 1 stop. Phone 513-427-0674

Dave-

As I recall, the problem is the fact that your comm program talks to the modem at some speed higher than 14.4 KBaud, expecting the modem to translate to the speed of the modem being called. However, the Celestial BBS has a similar modem, which will connect at maximum speed. The reason it doesn't work, is that the Celestial BBS is operating at 9600 baud, so it can't communicate at the higher baud rate.

Solution: Set your comm program to 9600 baud for calls to Celestial BBS.

I have had two of them. The first was destroyed by lightening three years
after I bought it. Since its full replacement value was covered by my
insurance I was in a position to buy a replacement. I looked long and
hard, considering all other brands, but finally settled on another
FT-767GX.

Its a heck of a good rig. I have it on the bookshelf in my office and
use it for 2 meters and all HF bands. I consistently get great signal
reports. Its voice quality is often commented on. Of course it doesn't
hurt that I have a TH7DXX at the other end of the coax. 73 Terry

1271. Raising our profile

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-21 23:20:06 UTC
From: laurahal@microsoft.com
Message-ID: <1993Apr21.232006.29567@microsoft.com>
Source record: 282835

Last weekend I was part of a group who provided communication
support for a 10k run around Vancouver, B.C. The ham radio part of it
went well, the repeater worked flawlessly, and it was generally a
textbook example of ham radio serving the community.

Except that nobody knew who we were. People noticed folks around the
course with radios, but even people I work with weren't quite sure what
our function was. I often find that people have no conception of
what amateur radio is and what hams do. Some have even forgotten
the very term `amateur radio'. Have you seen any depiction of ham radio
in the media recently? Have you read about ham radio in connection
with anything other than disaster communications recently?

I don't like the situation one bit, and am wondering what we can do
about it. Not only is ham radio fun, but it strikes me as a uniquely
exciting way of getting people interested in electronic (and other)
technology, and hopefully helping to grow the crop of engineers and
other techies they keep telling us the economy needs.

Comments?

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: The FCC has announced that their license
processing time is at 90 days--from the date they receive the
application. The FCC usually receives the application one
to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

This can mean that a license may not arrive until more than 100
or more days from the test session has elapsed.

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will not receive a new license from the FCC.
The existing Technician license plus the CSCE conveying the Morse
code test credit is the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming six to eight week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing

classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: The FCC has announced that their license processing time is at 90 days--from the date they receive the application. The FCC usually receives the application one to two weeks after the test session (once the VE Team and the coordinating VEC have completed their processing).

This can mean that a license may not arrive until more than 100 or more days from the test session has elapsed.

Note: Codeless Technician to Technician w/HF upgraders (who pass a Morse code test) will not receive a new license from the FCC. The existing Technician license plus the CSCE conveying the Morse code test credit is the only documentation issued for use of the additional HF privileges.

****

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to

MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1993 Test Fee is $5.60.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., PO Box 273, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 73665, Metairie, LA 70033; No phone

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999. Test fee for 1993 is $5.00.

H = Mountain ARC, PO Box 234, Cumberland, MD 21502; 304-289-3576

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 92044; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60142, Sunnyvale, CA 94088-0142;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27260;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2545; 615-688-7771.
The 1993 Test Fee is $5.60.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1993 Test Fee is $5.60.

1276. Examination Opportunities Scheduled 4/21/93 to 8/30/93

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-22 00:46:00 UTC
From: bjahnke@arrl.org
Message-ID: <3556@bjj>
Source record: 282841

Newsgroups: rec.radio.amateur.misc,rec.radio.info
Organization: American Radio Relay League - VEC
Distribution: 'world'
Followup-To: rec.radio.amateur.misc
Approved: rec-radio-info@ve6mgs.ampr.ab.ca

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: The FCC has announced that their license
processing time is at 90 days--from the date they receive the
application. The FCC usually receives the application one
to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

This can mean that a license may not arrive until more than 100
or more days from the test session has elapsed.

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will not receive a new license from the FCC.
The existing Technician license plus the CSCE conveying the Morse
code test credit is the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming six to eight week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing

classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1993 Test Fee is $5.60.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., PO Box 273, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 73665, Metairie, LA 70033; No phone

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999. Test fee for 1993 is $5.00.

H = Mountain ARC, PO Box 234, Cumberland, MD 21502; 304-289-3576

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 92044; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60142, Sunnyvale, CA 94088-0142;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27260;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2545; 615-688-7771.
The 1993 Test Fee is $5.60.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1993 Test Fee is $5.60.

1278. Doppler Source Found

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-22 01:23:21 UTC
From: eahu099@orion.oac.uci.edu
Message-ID: <2BD5F389.24368@news.service.uci.edu>
Source record: 282838

I have located a source for Doppler direction finding kits. The circuit appears to be based on the project described in "TRANSMITTER HUNTING - Radio Direction Finding Simplified" by Moell and Curlee. The kit comes with 2 printed circuit boards, one for the display and one for the rest. All parts are included to build the decoder and antenna switching circuitry, but the antenna parts are not included.

I'm told that Dopplers have their place in one's T-hunting arsenal. They are useful for locating mobile foxes and medium to strong vertical signals. They are not so useful for locating weak horizontal signals, especially when hunting in areas of strong adjacent channels.

The kits are available from Marty Mitchell-N6ZAV at (714)760-6060. They cost $99.00 plus $3.00 for shipping.

Byon Garrabrant KD6BCH byon@csulb.edu

1279. Re: Motorola MICOR et. al.

1280. Last minute Hamvention traffic and weather forecast

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-22 01:44:16 UTC
From: jmiller@afit.af.mil
Message-ID: <1993Apr22.014416.13612@afit.af.mil>
Source record: 282839

For what it's worth...

I made the run from WPAFB area B to Hara this afternoon. Wright Brothers Parkway (Harshman Rd., Needmore Rd., Shoup Mill Rd., take your pick ;-)) is down to only one lane in both directions between Ohio Route 4 and Ohio Route 201 (Brandt Pike), then again between Frederick and Riverside Sts (about a half mile interval, ending about a half mile east of Main St/Ohio Route 48). The construction I mentioned on I-75 doesn't appear to have started yet :-), but there's still another day to go. For those of you planning to use Ohio Route 4, it's also down to one lane between the Dayton city limits and just south of I-70.

Latest weather forecast...partly cloudy Friday, scattered showers and T-storms Saturday and Sunday. Highs mid 60's all three days...

Then again, it was snowing this morning...

73, Jeff

Central European hams (especially DLs) tend to use the short 55
(..... .....) in CW QSOs. Does anybody know anything about the usage
of this? I know that there have been quite hard discussions about it
in several CW user groups. All inputs are welcome. Send flames
directly to me:

How to find the Rec.radio.amateur.misc Frequently Asked Questions list
---

This article will tell you how to find the answers to frequently-asked Questions (FAQ) from rec.radio.amateur.misc. The FAQ articles are posted on the 7th of each month. This article is posted on the 22nd of every month as a reminder for where to find the FAQ.

The FAQ articles are intended to summarize some common questions on the rec.radio.amateur.misc newsgroup and Info-Hams mail list as well as to help beginners get started.

Besides the monthly posting, the FAQ is always available via anonymous FTP and from e-mail servers. This article contains instructions for obtaining a copy of the FAQ. It also contains the table of contents from the FAQ so that you know which questions are covered by it.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good signal-to-noise ratio in the newsgroup. However, they can't do it alone - you, the reader, have to use them. If you are a new user, please print and review the FAQ articles and look at the instructions in the news.newusers newsgroup before posting any articles. If you are an experienced user, please help by refraining from answering frequently-asked questions on the newsgroup if they are already answered by the FAQ articles. Instead, send e-mail to the user who asked the question. (It will be helpful if you include the part of the FAQ that answers their question, but not the whole thing.)

--How to obtain a current copy of the FAQ---

There are 3 ways to obtain a copy of the FAQ.
1) NetNews
2) Anonymous FTP
3) An Electronic Mail Server

Option #1: NetNews

If you are familiar enough with NetNews to look through previous articles on your system, Option #1 above may be the easiest for you. The FAQ is posted so that it should not expire from your site's news spool until the next one is posted. Unfortunately, some news administrators do not honor the expiration dates meant to preserve the FAQ.

Look in rec.radio.amateur.misc, rec.radio.info, rec.answers, or news.answers.
If the FAQ has expired at your site, try Option #2 (and ask your news
administrator to honor expiration dates for articles cross-posted to
news.answers if he/she can.)

Option #2: Anonymous FTP

Anonymous FTP uses the File Transfer Protocol. It is only avail-
able to sites which are directly connected to the Internet. If you don't know
how to use FTP and can't find a friend to help you, continue to Option #3. If
your site is not connected to the Internet, you should also continue to Option
#3.

The following sites have copies of the FAQ:
site name & address path to FAQ articles
------------------- --------------------
ftp.amdahl.com (129.212.11.1) pub/radio/amateur/faq.[1-6].Z
ftp.cs.buffalo.edu (128.205.32.9) pub/ham-radio/faq_ham_[1-6]
rtfm.mit.edu (18.172.1.27) pub/usenet/news.answers/ham-radio-faq/part*

Remember, when connecting to the remote system, use the login name of
"anonymous" and, as a courtesy to the site administrators, your e-mail address
for the password.

Option #3: Electronic Mail Server

If you can't use Options 1 or 2, your only remaining option is electronic mail.
You can retreive a copy of the FAQ by sending a message to
mail-server@rtfm.mit.edu

The body of your mail will contain a command for the mail server software.
To get all of the FAQ (consisting of 70K of e-mail in 3 parts), place the
following in the subject of your message:
send usenet/news.answers/ham-radio-faq/*

To obtain just one part, substitute the part number for the "1" in the
following example:
send usenet/news.answers/ham-radio-faq/part1

Leave out the subject of your message because the mail server will ignore it.

--- begin sample mail message ---
To: mail-server@rtfm.mit.edu
From: me@here.org
Date: Mon Aug 14 22:27:33 PDT 1995

send usenet/news.answers/ham-radio-faq/*
--- end sample mail message ---

Table of Contents

1284. QSL and 2X MODE

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-22 10:46:39 UTC
From: barp@ghost.dsi.unimi.it
Message-ID: <1993Apr22.104639.10843@ghost.dsi.unimi.it>
Source record: 282848

I'm IK2QCC Andrea Barp Milano Italy.

Dx'ing is my preferite activity in Ham-Radio, and connect new Countries
is what I try to do on the bands.

But when arrives the QSLs confirming the contacts some troubles raises.
More or less 40% of cards I received haven't under mode of qsos the "2X".

More or less all diploms exept DXCC need that 2x MODE.
For example 40% of USA qsls I received hasn' 2X ssb or 2X CW on it,
and so i can use these cards only for submitting a dxcc request, but
how many times I've to confirm a US State to submit a WAS request??
Arrl WAS need 2x on confirmations on qsl.

Anyway all those qsos were in two-way mode and so why not confirm
that? I never did a cross mode qso but from my qsl cards seems that
60% of mines was.

So for me is basically important to operate correclty on the bands,
but is fondmental that that precision will be put also in writing cards.

For example I've a nice collection of cards with a pre stamped array
with 2X MODE column, but with a computer label on it saying only for

example: IK2QCC 12.00 14 SSB 59. But the 2X where's gone?

So if we all try to pay a little more attention in all the actions related
to our activity I think that this will be appreciated also from
our correspondents.

73's to all and doog DX'ing to everybody.

55 at the end of a QSO between German speaking stations means
"viel Erfolg" (good luck/success). Typical usage is:

73 55 awdh = 73 gl cuagn

Origin of 55 is much debated, nothing of it is substantial.

73 55 awdh, Wolf.

If these truly use the same cable set as the MICORs, I can provide the
pinouts. Can't do it off the top of my head, info is at home. I'll
dig it out and email it to you.

1288. MacIntosh Ham Stacks - new release

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-22 13:35:36 UTC
From: dls@genrad.com
Message-ID: <1r66v8INN80n@freedom.genrad.com>
Source record: 282852

I've updated the Novice and Technician stacks to reflect the questions
as of July 1, 1993. Also, I need the US mail address of an FTP site for these
stacks (email me the address), so they will be available on-line.

Diana L. Carlson, KC1SP

LATEST VERSIONS: Novice v4.1, Technician v4.0, General v2.4,
Advanced v2.4, Extra v2.4

This is another announcement about the MacIntosh HamStacks which I have
created. If you are not interested, press 'n' now.

I have created five HyperCard stacks to help people practice for the
written Amateur Radio tests. There is one stack for each of Novice,
Technician, General, Advanced and Extra questions. Each stack is an
interactive multiple-choice test, created from the entire question pool
for that class of license. The test is randomly generated, using the
algorithms provided for each of the tests from ARRL, so this is a real-live
simulation of the tests you will get in front of a VE. There are some
print capabilities (you can print a test with a separate answer key, but it's
slow. you can also print your results of how well you did, along with the
accompanying correct answer key) and at the end of each test, it will tell
you how well you did, allow you to review the missed questions, and allow you
to take another randomly generated test. If you can consistently score
over 90 on the tests, it's almost a sure guarantee that you will be able to
take and pass the VE proctored test.

Note that these stacks will only work on a MacIntosh computer. HyperCard
version 1.2 or later is required; they were generated with HyperCard version
1.2. Because HyperCard data is NOT stored in any ASCII form, there is no
way that this data can be used on other computers, including IBM PCs, so
please don't ask for the impossible. Also, I do NOT have access to email
these stacks over the computerwaves, nor do I have ftp capability. There
are ftp sites which (will?) are supporting these stacks via ftp, as follows:

/* THIS PARAGRAPH IS NOT UP-TO-DATE. THE LATEST STACKS ARE NOT AT ANY FTP
SITE YET. I NEED AN ADDRESS FOR US MAIL TO SEND ONE.
These stacks are supported by ftp by Charley Kline, c-kline@uiuc.edu. To
access the files, type "ftp uxc.cso.uiuc.edu", log in as "anonymous", with
your email address as the password. Type "binary" at the prompt, then type
"cd pub/ham-radio". The five hamstacks are (eg): novice-v3.2.hqx.Z,
technician-v3.3.hqx.Z, general-v2.2.hqx.Z, advanced-v2.2.hqx.Z, and
extra-v2.2.hqx.Z (or similar names). To retrieve one of the files, (for
example, the Novice one), type "get novice-v3.2.hqx.Z". When you're finished
retrieving all the files you want, type "quit" to exit ftp. Each file must
be uncompressed before moving it to the Mac: "uncompress novice-v3.2.hqx.Z".

You need to use Kermit to transfer the files to the Macintosh. The files must then be un-binhexed by UnStuffit, then unstuffed by UnStuffit.
*/

The latest versions of the stacks are shown below, and are compressed with Stuffit Classic. UnStuffit is included on the diskette, and a copy of Morse Tutor is also included on the diskette. The Novice and Technician ham stacks have the questions which will be valid as of July 1, 1993. Other stacks include my new name and address.
Novice version 4.1
Technician version 4.0
General version 2.4
Advanced version 2.4
Extra version 2.4

If you wish to receive these PUBLIC DOMAIN stacks from me, please send me a SASE (self addressed STAMPED envelope - 2 ounces postage = .52) and 800K diskette. I will no longer send out the stacks unless the envelope has sufficient postage for return mail (in general, that means .52-.98, depending on size of envelope) and for those who send a standard business envelope, I take no responsibility for the condition of the diskette through USnail.

Thank you for your attention.

Message-ID: <93112.094359RWS100T@ODUVM.BITNET>
Source record: 282762

I would like to know the proper procedures to become qualified to communicate with others across the globe. For instance, friends of mine are moving to a small island between Gaum and Hawaii with very few telephone lines on the island. Would short wave be a good alternative for this situation? Any comments are appreciated ...

-Roy

1290. Re: What means 55? What means "awdh"

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-22 14:27:29 UTC
From: WOLF KOEHLER <WKOEHLER@ESOC.BITNET>
Message-ID: <93112.142729WKOEHLER@ESOC.BITNET>
Source record: 282851

When giving the example

73 55 awdh

I forgot (or was pressed by time rather because lunch time was approaching)
to explain what 'awdh' means. Thanks Chuck,K5FO for asking and reminding me.
Here's the explanation:

awdh Auf Wiederhoeren That's what you say when you terminate a conversation
with someone you cannot see but only talk to, i.e.
on the telephone or on the air. The English equi-
valent would be "I'll talk to you again".

awds Auf Wiedersehen This means "I'll see you again" and is used almost
exclusively at the end of a personal encounter.
In everyday's life is has been widely replaced by
more international expressions like "Ciao" or their
German counterparts ("Tschuess") and others.
It may be used on the air also if you happen to
know your QSO partner personally and expect to
"see" him again in the future.

The English expression "See you" in the sense of saying good-bye is not
generally well understood in Germany even by Germans who otherwise have
a good knowledge of English unless it is used to bid good-bye to someone
right in front of you.

I work in an international environment (European Space Operations Centre).
I remember one time when my co-worker was on mission in Japan and I talked
to him on the voice-loop (where everyone was listening in and a crowd was
standing behind me) and I finished by saying "Thanks and see you tomorrow"
with the meaning "I'll talk to you again tomorrow" as I knew he would stay
there for another couple of days, one of my German colleagues corrected
me: 'But you can't s e e him tomorrow!' For me, after more than 30
years of ham radio, "See you" has become natural even if I don't see him.

Anyway, I encourage all CW operators to use AWDH instead of CUL or CUAGN
in QSOs with German speaking stations (DL, OE, parts of HB9) and you might
also try the 55.

73 es 55 es gd dx es awdh/cuagn/hasta la vista/a bientot/salut/saludos/
adios/ahoj/dsw/kuulemiin/pa aterhoerande/ma'a salama/ciao etc. etc.,

I'l do it! (if there be a vote) ;-)

If you read the FAQ for the rec.radio.info group, you will see examples
of methods to filter out *just* the Amateur Radio related bulletins
(Solar Reports notwithstanding at the moment, but I am working on it).

>My reasoning for creation being that information of this sort has wide appeal
>and should not get burried in a newsgroup with a "select" readership.

and rec.radio.amateur.bulletin would not? rec.radio.info has a far broader
scope (I would hope ...)

>Follow on discussions would probably take place primarily in r.r.a.policy and
>r.r.a.operating.

Andrea,
I agree with you that such labels *should* state 2xSSB rather
than just SSB. It's a small effort and makes the QSL
unambiguous. Most 'professional' (IE, DXpedition) QSLers are
careful to do this. However, the actual occurrence of
crossmode QSOs these days is vanishingly small - I only have
one in my collection, a TL from the mid 1960s. He crossed out
the 2x and wrote "SSB-me". As near as I can recall, I must
have been on AM. Anyway, I would contend that the label you
describe pasted on a QSL card with a column for 2xMODE is the
same as writing in the column itself, a valid 2x confirmation.

Have you ever had one of these cards rejected for an award? If
so, which award. It would surprize me that any committee would
be so pickey. For example, when I read the ARRL's DXCC rules,
they seem to me to say that the card must state location (eg,
country name) in addition to the callsign. But the DXCC desk
seems to have no problem with accepting cards which only have
a callsign as the indicator of the country.

Heck, it can be done automatically using the `straightforward use of news
administration techniques'. In fact, this group (well, rec.radio.amateur.info)
existed on my machine as a local group (if the leaks be ignored ;-) using one
short sys line and a small shell script ...

Just like model 100 with built-in basic, note, sched, word, and Telcom
(communication via RS232 or built-in modem). It's in mint working condition.
If you are a HAM, it's perfect for packet on the go.

Price is $100 + shipping/COD.
I can be reached via Email or packet mail KQ4OY@n4awx.#cocoa.fl.usa.na
Please leave a msg (or a number I can reply sooner).

Good week for QSL's. Got 4 new zones confirmed, so now have 153... enough for the initial 5BWAZ certificate.

MY QUESTION: When submitting the cards, do I have to submit all 153? Or do they keep a record of my regular WAZ record so I can leave out the zones I confirmed for my initial award?

Thanks for any input.

You forgot to mention that he should check out rec.radio.swap since alot
of stuff goes through there. But the problem is that with Dayton right
around the corner, people are holding out. But, contact
kd1hz@anomaly.sbs.com since he has a Kenwood TH-27A 2m HT for $250.

If you can get ahold of an old WE 2500 set, the touch-tone pad can be
modified to generate those four extra tones, otherwise known as A,B,C,D.

Anyone else out there remember the mod?

Dale-

Many, if not most, existing 12-button tone generators have the necessary electronics for the additional 4 tone pairs. All you need do is add 4 additional dpst normally open, momentary contact switches, and find the unused lead to the tone generator circuit. As an alternative, you might install a spdt toggle switch, to switch the 3rd column push button common lead between the 3rd column and 4th column tone leads.

In the old 12 button telephone pads that used the high group and low group tapped inductors, the high group inductor had one empty terminal. In electronic circuits, there are frequently 8 consecutive pins on the tone chip, with leads from the push buttons on 7 pins, and no connection to the 8th pin.

1300. What is the significance of '55'

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-22 17:36:08 UTC
From: P.Lucas@mail.nerc-swindon.ac.UK
Message-ID: <9304221736.AA29180@swmis>
Source record: 282862

The explanation of '55' I have seen (discussed in RADCOM some years back) went like this:

During WWII, ham radio in Germany was essentially banned except for operation under the supervision of Nazi officials. Operators were expected to send 'HH' (for 'heil Hitler') at the end of their transmissions. Some operators took to adding extra dots to the end of each 'H' so .... (HH) became .... (55).

Not sure if this is the truth, or whether its just another 'Urban myth'.

I have never sent HH, 55, 73 or anything like that, coz I dont work CW!

CQ DX

This past weekend I attended the DX Convention in Visalia Ca. One session
was about the future of DX. They also talked a little bit about digital
communications using packet, amtor, and electronic mail systems.

So, I was thinking about working DX over internet and see
if I can get enough replies for DXCC. So if you are outside of the USA,
please email me a message confirming this CQ DX message.

73s & thanks,

Yes, with the new Ronco CLIP-O-TRON transmitter, you can work all the bands at the same time. By generating a square wave with an infinite number of harmonics, you can transmit everywhere, and with our new WHITE NOISE VFO, you can even transmit on all the frequencies within those bands.

But wait! There's more! On this special, limited time offer, we'll not only send you the CLIP-O-TRON transmitter, but we'll also send you our brand new NO-SELECT receiver. The NO-SELECT receiver, a miracle of modern technology, actually has no selectivity whatsoever, so you can listen in on all the frequencies from DC to daylight, at the same time. It's a perfect match to the CLIP-O-TRON.

That's not all! If you order before midnight tonight, we'll throw in this special BAD-FIST key, as our gift to you! Why be confused with all of those dits and dahs? The BAD-FIST only makes one length of code signal, so it's easier on you.

Plus, you get a free set of wind chimes and...

: :
: Seems pretty far fetched to me. But I think I'll let this urban
: legend live on if it'll keep the bootlegers off the ham bands. In fact
: maybe I'll [post it on the bulletin board at the airport, since we have
: ultralights flying around sometimes.

I think the ID device uses the characteristics of the frequency "chirp"
that occurs when a transmitter is first keyed. Synthesized radios generally
have not quite settled at the new frequency by the time the transmitter
keys up. Even with crystal-controlled radios, the transmit oscillator
takes a few milliseconds to settle down when it first comes on.

Every radio, even of the same make/model, will be slightly different in
this regard. If you can measure the turn-on frequency characteristics
accurately enough, you could identify the specific radio.

Message-ID: <1993Apr22.192452.28644@en.ecn.purdue.edu>
Source record: 282874

Looking for QSl info for 3 stations:
J68BG - have been informed to use YU1NR but cannot find that call in
callbooks.

ZK1UO - informed to send to DL7UUO, but no address found in Callbook.

9A1CCY - any route appreciated

Thanks

In RE: 2X mode on QSLs. I have just recntly started QSLing and find it very
little trouble to pen in 2X in the mode column. Even if you don't believe
that it is required, it is not that much extra effort to make sure your QSO
is valid for any award the station may want.

Make up some signs to put on hams' cars that advertise amateur radio.
There's an outfit (in LA I think) that makes large, yellow magnetic signs
that stick on your car door that say something like "Amateur Radio
Communications" with lightning bolts. I can obtain the address if desired.

For foot patrols, perhaps club jackets or patches with the words
"Amateur Radio" and the club name. These should be tastefully done --
I've seen some that look pretty dorky. One club bought blue construction-
type helmets and added a club decal.

CSMSCST@MVS.OAC.UCLA.EDU (Chris Thomas) sayeth, inter alia:

>>When I read the ARRL's DXCC rules,
>>they seem to me to say that the card must state location (eg,
>>country name) in addition to the callsign. But the DXCC desk
>>seems to have no problem with accepting cards which only have
>>a callsign as the indicator of the country.

When I was younger and even more paranoid, I called the DXCC cops about this point. What it really means is that if you have a card from VP8-something, the card needs to say whether it's a Falklands VP8 or e.g. a S. Georgia one. If the callsign unambiguously tells you the country - well, then it's unambiguous. I suppose that if you have an AC4 call you need to make it clear that you are not operating from Tibet...

In article <1993Apr2.211428.13776@lynx.dac.northeastern.edu>,
mhald@lynx.dac.northeastern.edu (Mark Hald) writes:

mhald> I would like to find a document at some FTP site or a message
mhald> from some kind, informed soul that has pre-arrival ticket
mhald> purchase info. and directions (hey, it's been three years!) for
mhald> within Ohio/Dayton to the arena (I assume it's still at HARA).

I recently posted some Hamvention info, and have included the
message below. The advance ticket purchase deadline has passed, so
you'll need to buy one for $14 at the door.

The flyer I referred to in my previous message contains directions.
Here they are verbatim:

I-70 Eastbound
Exit 26 (Route 49).
Travel south on Route 49 (Salem Avenue) to
Shiloh Springs Road (Salem Mall will be on left).
Turn left onto Shiloh Springs Road and travel east
to HARA Arena.

I-70 Westbound
Exit 29 (Route 48).
Travel south on Route 48 (Main Street) to Shiloh Springs Road.
Turn right onto Shiloh Springs Road and travel west
to HARA Arena.

I-75 North and Southbound
Exit 58 (Needmore Road).
Travel west on Needmore Road (Wright Brothers Parkway)
to Wolf Road.
Turn right onto Wolf Road and travel north to HARA Arena.
(NOTE: Needmore Road changes names. When headed west, it
will become Shoup Mill, then Turner. Just follow the blue
Wright Brothers Parkway signs all the way to Wolf Road.)

Rather than trying to park near the Arena, you can also park nearby
for free and take a free shuttle bus. Two good choices are the Salem
Mall and Forest Park Plaza.

The Salem Mall is on Shiloh Springs at Route 49. You'll pass it if
you follow the above directions down 49. If you're coming down 48,
continue on past HARA on Shiloh Springs. If you're coming from Wolf,
turn west onto Shiloh Springs.

Forest Park Plaza, where I usually park, is on Main Street, or 48,
south of Wright Brothers Parkway. If you're coming from 75, you'll
reach it before you get to Wolf. If you're coming down 48, continue
south past Shiloh Springs and WBP. If you're coming down 49, you
might as well park at Salem Mall.

Remember 146.94- if you get lost.

mhald> If possible, please include a promise of decent weather :)

In Dayton? In April? Good luck!

Hi, netter.
I am about to purchase a Vertical(GP) antenna for 7, 14, 21, 28 MHz and an
antenna tuner for that.
I saw ad about Cushcrft's R-7 and Butternut's vertical.
ANy recommendation on any vertical antenna for HF and a tuner welcome.
Thanks in advance.

Chang Song, HL5BGB.

I have had a R7 about a month and like it fine. It went to geather in about
a hour from opening the box till getting it up. The swr is better than the
specifications. I operates as an end fed half wave and should have alower
angle of radiation than a quarter wave such as the butternut.

I have a MFJ 941 D it works. I am looking for a better one as in most things
in life you get what you pay for and the MFJ is a fair deal for the money. You
can generaly find a nubmber of tunners at ham fest.

One mans opinion.

From: edc@wcsn.csms.com
Message-ID: <881@wcsn.csms.com>
Source record: 282810

I am looking for mods to the Alinco DJ560. There was one posted in Feb.
stating that you could do an 800mhz mod from the back of the owners manual,
but mine owners manual does not have that. It also stated the crossband
repeat function was normal, on this model I have the manual says it is not
possible. Has any one out there any mods that might work?
I Have e-mailed the person that suggested the above mod but I have got
nothing back form him as yet.
Thanks in advance

ZCZC AE46
QST de W1AW
DX Bulletin 20 ARLD020
~From ARRL Headquarters
Newington CT April 22, 1993
To all radio amateurs

SB DX ARL ARLD020
ARLD020 DX news

Thanks to Bob, W5KNE; QRZ DX; Chod, VP2ML; and The DX Bulletin for the items in this week's bulletin.

UGANDA. Jim, KF7E, has joined the 5X1XA/5X1XB DXpedition, although he has yet to receive his own call sign. This operation is slated for April 27 through May 12. Jim, 5X1B, has been on 20 meter CW recently.

ETHIOPIA. ET3DX, by JH1AJT and DJ9ZB; and ET3TI by OH8MVT continue to be active. Sid, ET3SID, shows up mainly on weekends with RTTY.

MADAGASCAR. 5R8DP operated by JA1OEM will be finishing up this weekend, though he hopes to work stateside on 80 meters before leaving.

SAINT CHRISTOPHER AND NEVIS ISLANDS. Look for Jack, KB8WC; Bruce, N8LXS; and Scott, KO8O, to be active from April 29 through May 5. Although plans are for an all band effort, extra attention will be paid to 40 and 80 meter CW.

BOSNIA/HERZEGOVINA. 4N4XX says that stations in Bosnia will begin using call signs with the prefix T9 sometime in May.

PACIFIC JOURNEY. Jakob, HB9TL, will be touring the Pacific during May and June. Here are some of the planned stops:

Papua New Guinea, as P29TL, from from May 5 through 13,
Solomon Islands from May 16 through 19,
Vanuatu from May 21 through 26,
Fiji, as 3D2TL, from May 27 through June 2,
Wallis Island, as FW/HB9TL, from June 3 through 8,
Tonga from June 10 through 13,
Western Samoa from June 14 through 17, and
American Samoa as KH8/HB9TL from June 18 through 20.

THIS WEEKEND ON THE RADIO. With big guns galore attending the Dayton Hamvention this weekend, competition on the bands may be a little less steep this weekend.

The Helvetia Contest, sponsored by the Swiss amateur society USKA, runs for 24 hours starting 1300z Saturday. Look for both CW and phone activity on the non-WARC HF bands and 160 meters. For more details, check out Contest Corral on page 106 of April QST.

Sunday the 25th is International Marconi Day, in commemoration of Guglielmo Marconi's birthday in 1874.

ZCZC AE46
QST DE W1AW
DX BULLETIN 20 ARLD020
FROM ARRL HEADQUARTERS
NEWINGTON CT APRIL 22, 1993
TO ALL RADIO AMATEURS

THANKS TO BOB, W5KNE QRZ DX CHOD, VP2ML AND THE DX BULLETIN FOR
THE ITEMS IN THIS WEEK'S BULLETIN.

UGANDA. JIM, KF7E, HAS JOINED THE 5X1XA/5X1XB DXPEDITION, ALTHOUGH
HE HAS YET TO RECEIVE HIS OWN CALL SIGN. THIS OPERATION IS SLATED
FOR APRIL 27 THROUGH MAY 12. JIM, 5X1B, HAS BEEN ON 20 METER CW
RECENTLY.

ETHIOPIA. ET3DX, BY JH1AJT AND DJ9ZB AND ET3TI BY OH8MVT CONTINUE
TO BE ACTIVE. SID, ET3SID, SHOWS UP MAINLY ON WEEKENDS WITH RTTY.

MADAGASCAR. 5R8DP OPERATED BY JA1OEM WILL BE FINISHING UP THIS
WEEKEND, THOUGH HE HOPES TO WORK STATESIDE ON 80 METERS BEFORE
LEAVING.

SAINT CHRISTOPHER AND NEVIS ISLANDS. LOOK FOR JACK, KB8WC BRUCE,
N8LXS AND SCOTT, KO8O, TO BE ACTIVE FROM APRIL 29 THROUGH MAY 5.
ALTHOUGH PLANS ARE FOR AN ALL BAND EFFORT, EXTRA ATTENTION WILL BE
PAID TO 40 AND 80 METER CW.

BOSNIA/HERZEGOVINA. 4N4XX SAYS THAT STATIONS IN BOSNIA WILL BEGIN
USING CALL SIGNS WITH THE PREFIX T9 SOMETIME IN MAY.

PACIFIC JOURNEY. JAKOB, HB9TL, WILL BE TOURING THE PACIFIC DURING
MAY AND JUNE. HERE ARE SOME OF THE PLANNED STOPS:

PAPUA NEW GUINEA, AS P29TL, FROM MAY 5 THROUGH 13,
SOLOMON ISLANDS FROM MAY 16 THROUGH 19,
VANUATU FROM MAY 21 THROUGH 26,
FIJI, AS 3D2TL, FROM MAY 27 THROUGH JUNE 2,
WALLIS ISLAND, AS FW/HB9TL, FROM JUNE 3 THROUGH 8,
TONGA FROM JUNE 10 THROUGH 13,
WESTERN SAMOA FROM JUNE 14 THROUGH 17, AND
AMERICAN SAMOA AS KH8/HB9TL FROM JUNE 18 THROUGH 20.
```

THIS WEEKEND ON THE RADIO. WITH BIG GUNS GALORE ATTENDING THE DAYTON HAMVENTION THIS WEEKEND, COMPETITION ON THE BANDS MAY BE A LITTLE LESS STEEP THIS WEEKEND.

THE HELVETIA CONTEST, SPONSORED BY THE SWISS AMATEUR SOCIETY USKA, RUNS FOR 24 HOURS STARTING 1300Z SATURDAY. LOOK FOR BOTH CW AND PHONE ACTIVITY ON THE NON-WARC HF BANDS AND 160 METERS. FOR MORE DETAILS, CHECK OUT CONTEST CORRAL ON PAGE 106 OF APRIL QST.

SUNDAY THE 25TH IS INTERNATIONAL MARCONI DAY, IN COMMEMORATION OF GUGLIELMO MARCONI'S BIRTHDAY IN 1874.
NNNN

1321. MFJ-1278 SSTV *.PCX Format

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-23 06:31:10 UTC
From: collinst@esvx19.es.dupont.com
Message-ID: <1993Apr23.063110.25921@es.dupont.com>
Source record: 282787

Looking for other MFJ-1278 owners who use the SSTV mode.

I tried using a program called PaintSHP to convert some
GIF & BMP files to PCX format. When I tried to load them
under the convert program in the MFJ-1289 Ver. 2.2 program
it would not accept them as "PCX" formatted files.

What I'm looking for is some guidance on how to convert GIF,
BMP, RLE and TIF files to the PCX format required by the MFJ-1289
program.

73,

I find that when I show people my 2m HT that they can't believe that it
is a "Ham Radio" and that I can talk locally (and 'regionally') with it.
Most people tend to associate Amateur Radio with the stereotype OM with
an HF transceiver and desktop mic.

When I started learning about the Amateur service(s) I myself could
hardly believe that a person could carry around a "pager-sized" radio to
talk locally with FM modulation. And that if you hook that HT to a PC
coputer you can transmit digital signals through the air - chatting with
other hams or connecting to packet bulletin boards - AMAZING!! - at least
that was my impression back in early '92.

Yes, I agree that we, as Amateur Radio operators need to get out the
message that will eventually break the old stereotypes.

A while back I acquired some ex_commercial VHF FM radio but
I need the service manuals or any circuit diagrams for them
I have some Kimberely 102 (ex-secuirty) radios and a
Philips FM806 radio.
I have rung Philips requesting the service manual but they
say they don't have it beacuse the radio is too old.
Does anyone know who makes this Kimberely radio?
Thanks in Advance
Jose

1326. LH5NP from the North Pole

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-23 14:01:31 UTC
From: magne@ddm3.ddm.st.statoil.no
Message-ID: <1993Apr23.140131.13286@statoil.no>
Source record: 282802

The arctic area service of the QST-LA (by LA1K last sunday)
reported that LA5NM, Mathias Bjerrang,
is on his way to the North Pole (I guess with a crew of scientists).
Callsigns for the mission will be LA5NM/VE2 and LH5NP. The first one
before they leave Canada, and the second one on the journey up north
and from the North Pole point.

The expedition is scheduled to last the period from 28. to 30 of
april. No frequency info is known to date, but listen at the usual DX-freqs.

* STS-55 NEWS *
===============
The primary goals of the STS-55 mission are to perform studies in materials
and life science research. A 9 day flight of Space Shuttle Columbia is
planned. Launch is scheduled for 24-Apr-93 at 14:52 UTC.

The following are the prelaunch predicted elements for STS-55, provided by
Robert Kliman at JSC. STS-55 will also carry SAREX and should provide more
opportunities for contacts, especially packet. On this flight there are
two amateur radio antennas, one in the flight deck window and one external
antenna on the spacelab module in the payload bay.

STS-55
1 00055U 93114.67000478 .00120200 00000-0 36300-3 0 69

Decay rate: 1.2020e-03 rev/day*2 NASA Johnson Space Center
Epoch rev: 2

G.L.CARMAN

The seven person crew on STS-55 includes ham radio operators Steve Nagel, N5RAW, Jerry Ross, N5SCW, Charlie Precourt, KB5YSQ, Hans Schlegel, DG1KIH and Ulrich Walter, DG1KIM. SAREX operations planned on this flight includes 2-meter voice and packet. The primary voice callsign will be N5RAW. The packet radio callsign is W5RRR-1.

The 2-meter FM voice and packet downlinks for the SAREX station are on 145.550 MHz.

Uplinks are: Voice Packet

Europe 144.80 144.49
144.75
144.70

Rest of World 144.99 144.49
144.97
144.95
144.93
144.91

Note: The crew will not favor any specific voice uplink frequency, so your ability to communicate with SAREX will be the "luck of the draw."

For all operations, Earth stations should listen to the downlink frequency and transmit only when the Shuttle is in range and the astronauts are on the air. Listen for any instructions from the astronauts as to specific uplink frequencies in use during the current pass. Also, listen to the uplink frequencies before transmitting to avoid interference to other users.

In addition to the U.S. SAREX ham gear in the Shuttle mid-deck, an additional ham radio station will be flown in the German spacelab module. This station, designated SAFEX (for Spacelab Amateurfunk-Experiment), includes a 2-meter FM downlink and a 70-cm FM uplink capability. A dual band (2-meter/70-cm) external antenna, mounted on the German spacelab module, will be used for SAFEX contacts. Payload Specialists Schlegel and Walter expect to make a few scheduled contacts with European schools with this equipment.

The externally mounted SAFEX antenna gives the SAREX team an opportunity to compare the performance of the U.S. SAREX window mounted antenna to an externally mounted antenna. A special A/B antenna test is planned on orbits 61 and 62 using the normal SAREX downlink frequency, 145.550 MHz. During orbit 61 the crew will transmit using the SAREX window antenna and on orbit 62 the crew will use the SAFEX external antenna. Individuals in the Southeastern U.S. are welcome to help participate in this test by taking signal strength readings of the received signal for both orbit passes.

[Info via Gary Morris, KK6YB, and Frank Bauer, KA3HDO]

* ARSENE LAUNCH DELAY *
==========
Bernard, F6BVP and Michel F2GM, report that an accident damaged the

omnidirectional antenna of the ASTRA satellite, thus the Ariane V56 launch is delayed 10 days if the antenna is repairable, or 3 weeks if it must be replaced.

[Info by James P. Dugal, N5KNX]

* MESSAGE FROM MIR *
==========
In a packet radio communications exchange between Mir cosmonauts and Amateur Radio operator Dave Larson, N6JLH, cosmonaut Alex recently conveyed the following thoughts:

Children are our future and we are ready for a dialog with them. Today (12-Apr-93) we are involved in the French experiments "Illuzion" and "Viminal". Systems on-board Mir are working well.

I am the EVA engineer. Gennadiy Manakov is the test pilot. I have a daughter, Lyouba, 13 years old. Gennadiy has a daughter, 16, and a son, Alexsey, 8. We would also like for our children to make friends with others through communication with others. We are travelling around the world every 90 minutes at an altitude of 400 kilometers. The Earth is very beautiful, and is home for us all.

Best 73, Alex

Joe Dreifuss, WA2GSY, reports the cosmonauts were busy with EVA activities scheduled on April 19, 23, and 27th.

* PHASE 3D FREQUENCIES *
==========
At the P3D transponder meeting in Muenchen (Germany), the following frequencies were chosen for the P3D satellite:

Downlink frequencies (Satellite to Earth)

1. 10 GHz (3cm) 10.451000 - 10.451500 GHz
2. 2.4 GHz (13 cm) 2400.500 - 2400.900 MHz
3. 435 MHz (70 cm) 436.000 - 436.400 MHz
4. 29 MHz (10 m) 29.310/29.320/29.330/29.340/29.350 MHz
one frequency selected by the control station.

Uplink frequencies (Earth to Satellite)

1. 1.2 GHz (23 cm) A: 1269.000 - 1269.500 MHz
B: 1269.500 - 1270.000 MHz
2. 435 MHz (70 cm) A: 435.200 - 435.700 MHz
B: 436.000 - 436.500 MHz
3. 145 MHz (2 m) 145.800 - 145.975 MHz

All bands except the 29 MHz band are switched in a matrix and allow any configuration of operational modes. Minor last minute changes or additions are still possible if necessary depending on transponder builders. A more detailed frequency plan will be distributed as soon as all final technical details are available.

[Info via Freddy de Guchteneire ON6UG, IARU Satellite Coordinator]

Hi I heard that the ARRL has an 800 number for new hams
it was 1-800-32NEWHAM
Does anybody know if that's right?
I have a niece that is trying to learn the code,
She lives out of state, and I gave her this number.
It apparantly didn't work, and I really want to
have her avoid frustration. I can't be of much help
because I live in NY not Michigan.
Send me E-mail if you know the right number.

planned. Launch is scheduled for 24-Apr-93 at 14:52 UTC.

The following are the prelaunch predicted elements for STS-55, provided by
Robert Kliman at JSC. STS-55 will also carry SAREX and should provide more
opportunities for contacts, especially packet. On this flight there are
two amateur radio antennas, one in the flight deck window and one external
antenna on the spacelab module in the payload bay.

G.L.CARMAN

The seven person crew on STS-55 includes ham radio operators Steve Nagel, N5RAW, Jerry Ross, N5SCW, Charlie Precourt, KB5YSQ, Hans Schlegel, DG1KIH and Ulrich Walter, DG1KIM. SAREX operations planned on this flight includes 2-meter voice and packet. The primary voice callsign will be N5RAW. The packet radio callsign is W5RRR-1.

The 2-meter FM voice and packet downlinks for the SAREX station are on 145.550 MHz.

Uplinks are: Voice Packet

Europe 144.80 144.49
144.75
144.70

Rest of World 144.99 144.49
144.97
144.95
144.93
144.91

Note: The crew will not favor any specific voice uplink frequency, so your ability to communicate with SAREX will be the "luck of the draw."

For all operations, Earth stations should listen to the downlink frequency and transmit only when the Shuttle is in range and the astronauts are on the air. Listen for any instructions from the astronauts as to specific uplink frequencies in use during the current pass. Also, listen to the uplink frequencies before transmitting to avoid interference to other users.

In addition to the U.S. SAREX ham gear in the Shuttle mid-deck, an additional ham radio station will be flown in the German spacelab module. This station, designated SAFEX (for Spacelab Amateurfunk-Experiment), includes a 2-meter FM downlink and a 70-cm FM uplink capability. A dual band (2-meter/70-cm) external antenna, mounted on the German spacelab module, will be used for SAFEX contacts. Payload Specialists Schlegel and Walter expect to make a few scheduled contacts with European schools with this equipment.

The externally mounted SAFEX antenna gives the SAREX team an opportunity to compare the performance of the U.S. SAREX window mounted antenna to an externally mounted antenna. A special A/B antenna test is planned on orbits 61 and 62 using the normal SAREX downlink frequency, 145.550 MHz. During orbit 61 the crew will transmit using the SAREX window antenna and on orbit 62 the crew will use the SAFEX external antenna. Individuals in the Southeastern U.S. are welcome to help participate in this test by taking signal strength readings of the received signal for both orbit passes.

* ARSENE LAUNCH DELAY *
==========
Bernard, F6BVP and Michel F2GM, report that an accident damaged the

omnidirectional antenna of the ASTRA satellite, thus the Ariane V56 launch is delayed 10 days if the antenna is repairable, or 3 weeks if it must be replaced.

[Info by James P. Dugal, N5KNX]

* MESSAGE FROM MIR *
==========
In a packet radio communications exchange between Mir cosmonauts and Amateur Radio operator Dave Larson, N6JLH, cosmonaut Alex recently conveyed the following thoughts:

Children are our future and we are ready for a dialog with them. Today (12-Apr-93) we are involved in the French experiments "Illuzion" and "Viminal". Systems on-board Mir are working well.

I am the EVA engineer. Gennadiy Manakov is the test pilot. I have a daughter, Lyouba, 13 years old. Gennadiy has a daughter, 16, and a son, Alexsey, 8. We would also like for our children to make friends with others through communication with others. We are travelling around the world every 90 minutes at an altitude of 400 kilometers. The Earth is very beautiful, and is home for us all.

Best 73, Alex

Joe Dreifuss, WA2GSY, reports the cosmonauts were busy with EVA activities scheduled on April 19, 23, and 27th.

* PHASE 3D FREQUENCIES *
==========
At the P3D transponder meeting in Muenchen (Germany), the following frequencies were chosen for the P3D satellite:

Downlink frequencies (Satellite to Earth)

1. 10 GHz (3cm) 10.451000 - 10.451500 GHz
2. 2.4 GHz (13 cm) 2400.500 - 2400.900 MHz
3. 435 MHz (70 cm) 436.000 - 436.400 MHz
4. 29 MHz (10 m) 29.310/29.320/29.330/29.340/29.350 MHz
one frequency selected by the control station.

Uplink frequencies (Earth to Satellite)

1. 1.2 GHz (23 cm) A: 1269.000 - 1269.500 MHz
B: 1269.500 - 1270.000 MHz
2. 435 MHz (70 cm) A: 435.200 - 435.700 MHz
B: 436.000 - 436.500 MHz
3. 145 MHz (2 m) 145.800 - 145.975 MHz

All bands except the 29 MHz band are switched in a matrix and allow any configuration of operational modes. Minor last minute changes or additions are still possible if necessary depending on transponder builders. A more detailed frequency plan will be distributed as soon as all final technical details are available.

1332. IRON ON PCB RESIST

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-23 14:50:06 UTC
From: bsm3708@ritvax.isc.rit.edu
Message-ID: <1993Apr23.145006.26776@ultb.isc.rit.edu>
Source record: 282797

Hi, I have used the TECH IRON on to copper pcb
stuff , and have finally had some luck.
The first time I tried it, I found that the bottom side artwork had
to be reversed in order to copy it on to the film.
The only way I had to do that was to copy it onto a transparency
then flip the transparency over, and copy again onto the
film. The results were less than desirable, and
I didn't end up making the board.
Try #2 I scanned the artwork, then digitally mirrored the artwork.
Then I used a Laser Printer to print the artwork onto the film.
This worked pretty good, but I bet not all of you have a scanner!
Anyway , my suggestion is that they start printing the mirror image
of the artwork in magazines and books, so that we could copy right to
the TECH film with one process !! Any comments??? 73 Brad WB8YGG

>at the same time. .... etc ...

Well, I just heard Paul N. Horowitz talk about the dingus they are using to search for extraterrestrial intelligence (SETI) at Harvard University. Their current machine is kind of a scanner, but with about 8 million simultaneous channels. (It's actually closer to 9.5 million, since it's 8 * 2^20 plus 2^20 or so for diagnostics.) It's only a receiver, though, so you can't work anything at all. They're not looking in the ham bands. Apparently they belive there's no intelligence there. The channels are spaced very close together - I don't remember how close, though.

Peace,
N1OSA - Bill White

1334. Kenwood TH28A Info

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-23 15:25:44 UTC
From: dhm@cbnews.cb.att.com
Message-ID: <C5y06z.JLu@cbnews.cb.att.com>
Source record: 282811

I recently bought a Kenwood TH28A which is a 2m mini HT.
Unmodified it has wide band VHF (118-173) and 440 UHF receive
capabilities. Since the VHF receiver was wide band I thought
it strange that the UHF receiver was limited to only 440
and began to investigate. After opening the unit I found
two green loops of wire located on the front circuit board
marked W1 and W2 which appeared to be option straps. I
had heard that the TH78 had similar straps and that W1 was
related to extend receive capabilites so I cut W1 to see what
would happen.

The UHF band now ranged from 400-518 mhz which was nice because
there is a lot of activity in the police band 460-461 mhz.

A new band (340-400 mhz) also appeared when I switched between
the FM VHF band (132-173) and the AM VHF band (118-132) using
the hold F key for 2 second then press the LOW key procedure.
Does anyone know what this band is used for? I picked up
some TV related stuff and celluar intermod.

Does anyone know if the unit can be modified to access the
800 mhz band?

Other features I noticed which I didn't see in the documentation:

If the unit is powered up while key 1 is pressed, the unit
becomes a channel only oriented device. Instead of showing
frequency on the display, only the preprogrammed channel
numbers are shown. Features involving frequency display or
entry, such as the VFO are disabled. The channels can be
changed using the VFO knob but not entered via the keyboard.

If the unit is powered up while key 7 is pressed the word
CLONE is shown on the display. Does this feature work similar
to the TH78? Can the setup information of a TH28A be transferred
to a TH78?

Does anyone know of other undocumented features of the TH28A?

Greetings -

I have seen the fingerprinting system and it does indeed work...
Phil Ferrell, PhD - K7PF, is the designer of the system (patent holder too) and has used it as a watchdog on the Seattle Repeater (146.88/28) for years. He built the prototype units for the FCC years ago and has been mfg follow-on systems for them.

The proto system had an IBM PC as the system controller and used a modified Bearcat scanner as its receiver. It is interesting to see the differences in signatures between similar radios (say a bunch of IC-2AT's) They are ALL different and easily identified!

Contact Phil for additional information.

Mention 70cm, but it many areas of the country it's pretty dead.
While it was quite active in NJ when I bought my FT470, it's pretty
useless down here in the DC area (plenty of repeaters, just no one on
them, unless, of course, that's what your after).

After a lot of effort, I had limited luck with the TEK film. The biggest problem was getting good adhesion of the toner from the copier or laser printer to the film. I tried mand different machines but much of the time sections of it would either fall off or smear or else come off when I peeled the film away. Getting the iron-on phase right takes some learning too. I was successful in making some moderately critical circuits, edge-coupled microstrip bandpass filters and such, however I finally gave up when I found a better way.

o The better way

I got some of the new DynaArt Designs material that is now offered from quite a large number of suppliers. It is basically paper with a transparant water soluable carrier onto which you copy or print the toner. You then iron-on as with the TEK film but rather than peel away the film you just put the whole works, PC board and all, into water and the carrier dissolves, the paper backing comes off leaving *all* the toner on the copper. This works *much* better and also gets from design (or scan) to toner with fewer steps much of the time. I can usually go from the PC board layout tool on the computer to an etched board which is ready to have parts loaded in under an hour. About the most important aspect of this is to have good toner which gives saturated black on paper. The manufacturer suggests some sources of particularly good toners. I just used the standard paper toner which came with my HP laser printer and wasn't even a new cartridge.

I've used the process to generate fairly width-critical circuits, 90 degree microstrip hybrids and complete image reject mixers at 1200 MHz, with quite good results. I even managed to get reasonable yield on some *very* narrow lines which happened to be on one design, one pixel wide at 300 DPI which amounts to about .003". I don't recommend trying to do fine line process this way but it gives an idea of how well it all worked.

The material is $2-3 per A size sheet but you can pack multiple circuits onto a sheet and only cut out and use the ones you want. I think that the cost/effectiveness ratio is much better with this process than with anything else I've tried. I don't intend to use the TEK stuff

again for anything.

A bunch of people appear to handle the DynaArt material.

DynaArt Designs
3535 Stillmeadow Lane
Lancaster, California 93536
805.943.4746 (0700-1700 PST)

I bought mine from

DC Electronics
P. O. Box 3203
Scottsdale, AZ 85271

800.467.7736
800.423.0070

I think it's about $15 for 5 sheets.

I have no connection with either of these places except as a customer.

1347. STS-55 SAREX Antenna Test

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-23 19:40:03 UTC

Shuttle Amateur Radio EXperiment (SAREX)
STS-55 Antenna Test

INTRODUCTION:

Here's a great opportunity for schools and hams in the
southeastern United States.

Shuttle mission STS-55 is scheduled for launch on April 24, 1993.

During the flight, Motorola Amateur Radio Club members in Florida
will conduct a test to assess the performance of two different
SAREX antennas in space. Each participant in this experiment
is supplying valuable information to the project!

During Orbit 61, the Shuttle crew will transmit a signal on
145.55 MHz using the SAREX antenna positioned in its normal
orbiter window. For Orbit 62 they will transmit again on 145.55
MHz, this time using an external German SpaceLab antenna in the
cargo bay of the Shuttle.

Your mission is to measure the signal strength (S-meter reading)
and the time of Acquisition Of Signal (AOS) and Loss Of Signal
(LOS) of the Shuttle's transmissions at regular intervals
during both of these orbits.

(For more information on STS-55 and the Antenna Test, please see
February 1993 QST, page 42.)

GETTING STARTED:

1) Determine what time to listen for the transmissions. STS-55
is scheduled for launch on April 24, at 14:52 UTC. If the launch
is on time, the Shuttle will near North America during Orbit 61
on April 28, at 08:55 UTC, and Orbit 62 at 10:29 UTC.

The Orbit 61 pass occurs 3 days 18 hours and 3 minutes after
launch (this is known as 3/18:03 MET - Mission Elapsed Time).
The Orbit 62 pass occurs at 3/19:37 MET. If the launch time is
delayed, simply add the actual launch date/time to the MET values
(see table below) to get the new Orbit 61 and 62 times. This is
explained in more detail in the section labeled "MISSION ELAPSED
TIME."

Table 1
(using a launch date and time of April 24, 14:52 UTC)

Launch 00/00:00 MET or Apr 24, 14:52 UTC
Orbit 61 03/18:03 MET or Apr 28, 08:55 UTC
Orbit 62 03/19:37 MET or Apr 28, 10:29 UTC

2) Synchronize your watch to WWV or any precise time source (you may phone WWV at 303-499-7111). It is important to make sure that the times you record are as accurate as possible. Record all times to the exact second.

3) Begin listening for the Shuttle a minute or two before the scheduled start of Orbit 61. The receive-only frequency is 145.55 MHz.

As soon as you start hearing the transmissions, record the time to the exact second. This is the Acquisition Of Signal (AOS) time.

Next, begin recording the signal strength of the transmissions at regular intervals. The Motorola Amateur Radio Club recommends that you record the signal strength every 15 seconds. Signal strength may be reported in S-units or the number of bars on a bar graph meter or simply estimate the signal quality ("sounds like 20 dB quieting", etc.). Record the time and signal strength readings as accurately as possible on an Orbit 61 Data sheet. Take as much data as possible.

(Stations with advanced capability and equipment, such as a calibrated receiver, can report signal strength in dBm or microvolts. Please attach a description of the method used to calibrate the receiver, and antenna and feed line gains and losses.)

Finally, record the time when you lost the signal to the exact second. This is the Loss Of Signal (LOS) time. (The maximum time between AOS and LOS is approximately 8-10 minutes.)

4) Repeat Step 3 for Orbit 62. Do not forget to record the exact AOS and LOS times. The AOS and LOS times are just as important as the actual signal strengths, so stations with no S-meter are still supplying important information. Log all of the data on an Orbit 62 Data sheet.

5) Return station information form and all data within 10 days after the experiment to ARRL, SAREX Antenna Test, 225 Main Street, Newington CT 06111.

Thank you for your participation!

MISSION ELAPSED TIME:

How do you plan for timing Orbit 61 and Orbit 62 when you only know an approximate launch time? The best planning tool is Mission Elapsed Time (MET). That's what NASA uses to schedule crew operating schedules.

With MET, you start counting time at liftoff. Think of it this way: During countdown, the clock moves backward ("T minus 10, 9, 8 seconds, and all that). At the moment of liftoff, the clock starts moving forward.

As an example, let's say the actual launch time is April 24 at 14:00 UTC. Since Orbit 61 nears North America at Mission Elapsed Time 3 days 18 hours and 3 minutes (3/18:03 MET), then add this to the new launch time:

Apr 24 14:00 UTC +
3 days 18:03 MET = April 27 at 32:03 or April 28 at 08:03 UTC

As a result, for a April 24 launch at 14:00 UTC, Orbit 61 will occur on April 28 at 08:03 UTC.

Because of launch delays, MET is the only reasonable way to figure time during a mission.

W1AW will broadcast bulletins during the mission announcing the actual launch time and Orbit 61 and 62 times for this experiment.

DATA (Sample forms, etc.):

Please provide the following information which will be necessary for us to accurately analyzed all of the data.

NAME-
CALL-
ADDRESS-
PHONE (DAY)-
PHONE (NIGHT)-

Station Information
(attach additional sheets if necessary.)

LATITUDE-
LONGITUDE-
ELEVATION-

RADIO-
ANTENNA- (Please include the type, gain, polarization, and height.)

(If you are using an HT receiving on a portable antenna (rubber ducky) make sure to keep the receiver and antenna in the same location and in a fixed position during the duration of both orbits.)

Are you using a steerable satellite tracking antenna?

Detailed equipment configuration- (include accessories such as preamps, external meters, calibrated signal generator, ...)

* Return this information and all data within 10 days after the experiment to ARRL, SAREX Antenna Test, 225 Main Street,

Newington, CT 06111.

> I understand horizontal and vertical porlarization of an antenna or RF
> signal. I am just getting interested in satellites and don't understand
> circular polarization. What is circular polarization, and right or
> left circular polarization?

Circular polarization means that the orientation of the plane of the E-field (which is the normal reference for stating polarization) changes with time; it rotates. The best way to understand it is to look at one of the more common antennas which produces this form of polarization, the helical. "Right" or "left" circular polarization simply refers to the "direction of the spin" - analogous to right and left-hand threads on screws.

Hello!

Can anyone tell me if there is a convention when hooking up paddles: i.e. is the right paddle normally di or dah? Also, any pointers on proper techniques for using them? (I'd hate to learn bad habits early in my career. :-)

Thanks,
- Rich

(Anxiously awaiting my Tech+ ticket. :-)

A friend is using the IC290 as a transverter for HF and needs the mods to extend the TX to the USA spec, 144-148, instead of the current 144-146. Can anyone supply the information please?

Yep, I did that too. I acquired an old Icom 22S for packet use for $60 (and probably overpaid, but the ham was helpful and friendly) and have changed frequencies by recrystalling and doing another mod that gives me 600kHz offsets for repeater use. I have gotten good use out of the HT, and expect to go add a mobile rig in a year. I feel I got more use out of HT first than I would therwise. It is a lot easier to move the HT around than the mobile unit would be.

I'll post instructions for the IC22S mod when I finish hooking up the TNC and confirm it works. (And will acknowledge all those who sent advice on it also)

Actually the most expensive thing you did was get an amateur license :-)

1352. Two-Line Orbital Element Sets

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-23 23:28:49 UTC
From: tkelso@afit.af.mil
Message-ID: <tkelso.735607729@afit.af.mil>
Source record: 282821

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (513) 427-0674, and are updated daily (when possible). Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.misc. This week's elements are provided below.

This is a beautiful project for ham clubs.

o Get the schools involved. Offer a demonstration of ham radio
activity, then offer a class to interested students.

o Set up a booth at any local or regional activity (wine festival,
dandelion festival, etc.) and take NTS traffic. It's great PR
for amateur radio, and the NTS folks would love the traffic.

o If your club is having a particularly interesting speaker (an
astronaut or local celebrity), invite the local media ... especially
the local TV outlets. TV reaches the masses.

The original poster mentioned disaster traffic. It's true that when something
bad happens we get the opportunity to shine. Follow up on that. Ops that
are contacted by media have an "in". Find a way to use it.

>is the right paddle normally di or dah? Also, any pointers on proper
>techniques for using them? (I'd hate to learn bad habits early in my
>career. :-)

I think that the convention is for the thumb to be dit and the index finger be dah. If you use your right hand this would mean that the dah is the left paddle, and vice-versa if you use your left hand.

As a right hander, one thing I wish I had done from the start is to learn to send with my left hand. The big advantage is that you can then send at the same time as you write. This is especially useful for contests, where you can then log at the same time as sending. Fortunately, it's a lot easier to learn to send with the "other" hand than to write with the "other" hand.

The other recommendation would be to learn to send "iambic" style right away. That is to "squeeze" both paddles for sequences of dit-dahs or dah-dits. So for example, sending C would be a "squeeze" contacting the dah side first instead of alternating between dah and dit twice. This makes things much easier as you get to sending faster.

This may be a kinda dumb question, but I don't know and this is the quickest way for me to find out.
I am planning to visit Toronto for a couple of days during my vacation this summer. Are there any rules about operating in Canada that I need to know about, other than the 70cm restrictions? Anything I need to do ahead of time?

Somebody asked when the last time a non-disaster reference to amater radio was made in the media.

When the last shuttle flight went over some hams in Hudson, WI made the front page of the St. Paul paper. (or at least the fron of the Wisconsin section) by having school children talk to the shuttle.

Well, I am moving from the Boston area to the Palo Alto California area and am going to be making the move (in part) by driving. In order to make the trip in a reasonable time I plan to take Interstate 80 for pretty much most of the way.

Any suggested check-in's on 2m that I can look for along the way to help pass the time and distance?

Many thanks in advance and 73!

I really don't have a big problem with the no-code license, but I do
have a problem with no-code licensees who scream for this and that
without making the effort to upgrade.

It also depends on what area of the country you're in. I know out here,
2m has become the CB of the ham bands. And hey, look at Britain where
they won't allow their entry class licensees access to 144-146MHz
because of "Congestion and poor operating practices.".

Do yourself a favor, save some more money and buy the TH-78A
dual-bander. I made the mistake of limiting myself to 2m only when I got
my license a year ago and lost money on the deal.

Actually I think the dit should be on the left paddle, the dah on the
right one. But to be honest, it really doesn't matter.

you don't need to defend yourself---the ``people'' flaming folks with the no-code license are, by far, the minority. they do *NOT* represent the opinion of the majority of Amateur Radio operators. there are some rather vocal anti-no-code types on this group, but hey, after the split of the group, they'll be limited to rec.radio.amateur.flame ;-} ... so you shouldn't need to worry about hearing from them, even, after that. :-)

don't know how long you've been licensed (if you said it, I missed it), so this may be a bit late...but either way, welcome to the hobby!
--jim

PS: I don't remember who made the tongue-in-cheek suggestion about rec.radio.amateur.flame, but I can't take credit for it.... so this to give credit to that person, whoever they are.

First off, confirming a CQ DX message is NOT two-way, and hence would qualify you only for an InterNet/UseNet endorsed SWL award ;^)

Second, why not post interesting things so that people WANT to e-mail with you (a similar problem exists on HF and other bands as well... dull boring cookie-cutter QSO formats that bore even the list-takers) instead of jumping in and turning your amplifier on and screaming: "CQ DX!"

> 73s & thanks,
And, fourth, since 73 equates to "best regards" it really doesn't need the extra "s" at the end.

Sheeeeesh! Next I suppose some bozo will set up a net (r.r.a.list_taker) and "help" newbies make the honor roll... speech processor (all caps ;^) blaring, beaming to.... maybe the UHF spectrum and EME *is* a better place without CW required for the ticket to play.

Landline BBS open to all: (916) 262-1657
RACESBUL.270 DATE: April 19, 1993
SUBJECT: TNG - Exercise technique
Seldom do state level radio communications exercises approximate
"real world" communications.
Unlike health and welfare traffic, government communications
tends to be predominantly sporadic, informal, and tactical in nature.
Long periods of no communications are common. As they say in the
service, "Hurry up and wait".
An exercise technique used successfully is that of sending the same
message over multiple channels. This means that a message from State
to a county EOC is transmitted via the RACES, Civil Air Patrol, SECURE,
Local Government or other available and appropriate radio systems.
Following the exercise, you request that the received message forms
be mailed back to you to show both accuracy and time of receipt. In
county to city exercises, CB radio may be thrown into the mix.

BID : $RACESBUL.271

TO: ALL EMERGENCY MANAGEMENT AGENCIES VIA AMATEUR RADIO
INFO: ALL RACES OPERATORS IN CA (ALLCA: OFFICIAL)
ALL AMATEURS U.S. (@ USA: INFORMATION)
FROM: CA STATE OFFICE OF EMERGENCY SERVICES (W6HIR @ WA6NWE.CA)
2800 Meadowview Rd., Sacramento, CA 95832 (916)262-1600
Landline BBS open to all: (916) 262-1657
RACESBUL.271 DATE: April 26, 1993
SUBJECT: MGT - Tell it like it is!
Experienced volunteers of all kinds in government serv-
ice are accustomed to callouts where they are recalled while
enroute, or told to return upon their arrival on scene. Inexperi-
enced volunteers become upset when this happens. As managers we
should stress to potential volunteers that this may happen more
often than not. The point being that your volunteers must be
conditioned to accept this fact. Yes, that's blunt talk but a
necessary truth. Never be bashful when describing your expecta-
tions of your volunteers. It helps reduce future disappointments
among anyone serving on your regular volunteer staff.
When you are candid up front, more people will choose
not to join than those who do. But the bonus is that it leaves
you with staff that will be with you for the long haul. I tell
each potential applicant that I expect them to be working with
this agency 5, 10, 15 years down the road. That serves to really
get the individual's attention that we are really not interested
in wasting our time and effort to accomodate "joiners" and "prima
donnas". I have done this for thirty years with communications,
search and rescue, law enforcement, firefighter, and other public
safety volunteers with superb results.

If you're so busy, how did you have time to study the Element 2 and 3A question pools?

Don't want to answer for Mike, but all it took for me to pass the written was a few hours of reading, randomly scattered over a few weeks. After all, most of the "theory" is old hat or guessable to anybody that remembers E&M from college physics and most of the regulation questions can be answered by applying common sense, which leaves only trivia like band edges and a little operating knowledge to learn.

Compare that to code which seems to need a half hour *every day* for several weeks.

1372. Mods for Ten Tec Paragon ?

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-24 18:58:35 UTC
From: dihi@bsdihi.atr.bso.nl
Message-ID: <735677915snx@bsdihi.atr.bso.nl>
Source record: 282742

A friend is using his Ten Tec paragon for daily contact on 40 m with
a maritime-mobile station sailing somewhere in the caribian.
He updated the rom from version 3.2 to 3.9, hooked up the RS-232
interface but has some receiver trouble.

- When working within 7.5 kc from a stron station it is hard to work
in phone on 40/20 and 15 mtrs.

- When tuning over very strong stations, whistles are heard next to
the carrier freq.

After this experience he connected the set to a signal generator. At sig
levels of 500 uV overload occured and extra signals and noise was heard,
especially within 15 kc of the 75 Mc filter.

Are there any known mods to deal with this problem? i.e. other diodes in
the high pass filter?? Is another mixer an option ? i.e. using a Plessey
SL16440?

Any suggestions welcome!

Dick Hissink PA3DSP

Actually, Mike, you are an Amateur, who happens to have a VHF license.
COngratulations on your entry into the hobby, and my personal best
wishes for your success in upgrading to whatever level suits you and
makes you comfortable.

You say you scarcely have time to talk on your radio, but you describe
driving frequently. Am I missing something here, or do you not have a
good mobile installation? I'd be happy to help you with suggestions if
you'd like, probably e-mail rather than r.r.a.m would be better.

> The no-code entry for me was perfect
> because I have wanted to be an amateur for quite some time, but did not
> have the time to study code.
Excellent. That was the intent, as I understood it, of the VHF-privileged
Technician ticket. All grumbling by the OFs aside, the system seems to
be working far better than anticipated, because about 60% or more of
newly licensed Technicians upgrade to a license including CW within a
short time of entering the hobby. I applaud your initiative and would
offer you help when the time comes. The important thing is you did not
stay out of amateur radio wishing you could get in and play...you got
in and intend to learn more. Good for you.

> I just wanted to defend myself since there seems to be a lot of flaming to
> no-codes.
You have no reason nor need to defend yourself. That is not the
direction the flames seem to be taking, though I had better raise my
own shields ("Raise Flame Shields, Scotty! ;^) The main thread of the
flamfest seems to be at people who get a ticket and camp out on a
repeater, yakking like 11 meters, with no interest in learning nor in
participating in the hobby beyond a huge party line...

> I understand the importance of code
Wish I did... ;^)

> Not all of us are bad.
Nope. Many are right fine Hams, and I am proud to teach and elmer them
into the hobby.

1374. rsgb gb2rs news 25th april

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-24 19:49:15 UTC
From: ted@tedb.demon.co.uk
Message-ID: <735680955snz@tedb.demon.co.uk>
Source record: 282702
Cross-posted to:
rec.radio.info,rec.radio.amateur.misc,rec.radio.amateur.packet,rec.radio.amateur.misc,rec.radio.amateur.packet,rec.radio.info

Good morning. It's Sunday the 25th of April and here is the GB2RS news broadcast, prepared by the Radio Society of Great Britain.

First the headlines:- BT supports amateur radio; a radio amateur is prosecuted; and a there's a possible licensing hitch for married amateurs.

British Telecom has indicated its support for the RSGB's Project YEAR by donating videos and booklets to help with Novice training. Project YEAR - Youth into Electronics via Amateur Radio - is an ongoing initiative by the Society aimed at encouraging young people into the hobby. It involves several books, the Novice Licence, a video - Amateur Radio for Beginners - which is available to clubs from the RSGB Audio Visual Library, and a magazine D-i-Y Radio.

If your club is holding an event which is particularly suited to the beginner or Novice licensee, the RSGB can provide publicity for the event in D-i-Y Radio. Details of relevant meetings, rallies or open days should be sent to Marcia Brimson at RSGB HQ, marked D-i-Y Radio. And don't forget to tell us about any committee members with special responsibility for newcomers and Novices.

The Radiocommunications Agency of the DTI has announced a successful prosecution under the Wireless Telegraphy Act 1949. On the 25th of March, at Lisburn Magistrates Court in Northern Ireland, a radio amateur was fined a hundred pounds with ten pounds costs and had to forfeit his transceiver said to be worth five hundred pounds. The prosecution, which was for using frequencies not covered by the defendant's licence, came about following television interference complaints and followed several warnings. Next Thursday, at Dudley Magistrates Court, the RA will be prosecuting another radio amateur in a case which involves abuse of the amateur repeater network in the Midlands. The RA says that information supplied by the RSGB's Amateur Radio Observation Service was particularly helpful in preparing the case.

The RSGB '93 Show takes place on Sunday the 16th of May at the National Exhibition Centre, near Birmingham. There will be the usual trade stands in a single huge hall, plus a large display of the work of RSGB Headquarters and of the Society's committees. The National Vintage Communications Fair is also being held that day in the NEC complex. Many visitors will wish to visit both shows and reduced rates are available for this.

The May edition of Radio Communication will be posted to all RSGB members in the next few days. It contains the latest on RAEN Ltd, repeater licensing and VHF awards. The full text is given of the amendment to the Amateur Radio Licence, concerning the 430MHz band, which we announced recently on GB2RS.

The organisation which processes amateur radio licences, Subscription Services Ltd, has said that it regrets that, at present, it can collect only one Direct Debit from a bank account for licence renewal fees. This has caused difficulty where two licensees sharing a joint bank account have different renewal dates. The situation is likely to be resolved shortly but in the meantime anyone who is in this position is advised to make alternative payment arrangements.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO. From Bahrain, DL1WH will sign A92WH from now until the end of June 1993. He may also use the club callsign A92C. From Crete, a group of Greek amateurs will use the callsign J49GI from Gavdos Island, starting on Sunday the 2nd to Friday the 7th of May. Check these frequencies: On CW 1835, 3525, 7025, 14025, 21025 and 28025kHz and for SSB 1845, 3795, 7045, 14195, 21295 and 28495kHz. They also hope to be on the WARC bands. From Sierra Leone, K5LBU is now active as 9L1CB. His tour with of 2 years with the Baptist Mission ends in early 1995. From Kampuchea, HA7VK is now active as XU7VK from now until the end of June. From Tromelin Island, FR5ZQ/T is said to be active around 14.120MHz after 1700GMT. From Guadeloupe Island, the XF1G team now expect to be active from now until Thursday the 29th of April.

We know of three rallies scheduled for today, Sunday the 25th of April:

The Bridlington and District Amateur Radio Society's East Yorkshire Rally is being held at The Spa, Bridlington. Doors open at 11.00am, or 10.30am for disabled visitors. There are many traders, club stands and a bring & buy stall. Refreshments are available.

The Bury Radio Society Hamfeast is being held at the Bury Leisure Centre, Bolton Street, Bury, Lancs.

The Dacorum Amateur Radio and Transmitting Society Car Boot Sale is being held at the Heath Park Hotel, Hemel Hempstead, Hertfordshire.

Rallies for Sunday the 2nd of May:

The Anglo-Scottish Rally is to be held at Tait Hall, Kelso. Further details can be obtained from Bruce, GM4UIB, by telephoning 0573 224654 (evenings only).

The British Amateur Television Club Rally is to be held at Harlaxton Manor, Near Grantham, Lincolnshire. It is just one mile off the A1 (signposted). Doors open at 10.00am. There will be the usual traders inside and an outside flea market. The event features a lecture programme and demonstrations, and refreshments will be available. Talk-in will be on Channels S22, SU22 and via GB3GR on RB11. The entrance fee covers access to the new Harlaxton Gardens which is an ideal family venue. A substantial reduction in entrance fee is available on production of a copy of Radio Communication or CQ-TV magazines. Further details are available from Paul, G8MJW on 0522 703348.

Rally for Monday the 3rd:

The Mid Cheshire Amateur Radio Society Rally is to be held at the Civic Hall, Winsford, Cheshire. Doors open at 11.00am, or 10.30 for disabled visitors.

Full catering and ample car parking. Further details can be obtained from David, G4XUV on 0606 77787.

News now of a cancelled Rally:

The Scarborough Amateur Radio Electronics and Computer Rally scheduled for Sunday the 25th of July has had to be cancelled by the organisers. They will now concentrate on finding a suitable new venue for July 1994. Further details from Ross, G4ZNZ on 0723 514767.

HF contest news next:

The RSGB's 1993 National Field Day, the Golden Jubilee event, takes place in June. All Groups intending to participate are reminded that they need to send details of their site to Chris, G3SJJ, QTHR, to arrive no later than the 1st of May 1993. See February RadCom page 66 for further details. The next RSGB Slow CW Cumulative Contest takes place on Thursday the 29th, from 1830 to 2000GMT, using 3.530 to 3.580MHz only. See March RadCom, page 81 for the rules. The AG CW DL QRP/QRP Party is scheduled to run from 1300 to 1900 on Saturday the 1st of May using 3.510 to 3.560MHz and 7.010 to 7.040MHz CW only. See April Radcom page 13 for band and class details.

Now some UHF contest news:

The RSGB 432MHz to 24GHz Contest starts next Saturday the 1st at 1400GMT and finishes at 1400GMT on Sunday the 2nd of May. Also during Saturday the 70cm Trophy Contest will take place from 1400 to 2200GMT. See February RadCom page 66 for details, but note that the date for the 70cm Trophy is printed incorrectly; it should read the 1st of May.

Special event stations this week include:

GB2AMN which will be aired by RAF Finningly Amateur Radio Society during today Sunday the 25th to celebrate the opening of Newark Air Museum 20 years ago. The station is operating from two aircraft in the static display at the Museum; the HF station from a Varsity and the VHF SSB station from a Shackleton. All contacts plus SWL reports will receive a QSL card.

And now the solar factual data

There is an extended period this week - the 9th to the 18th of April - due to catching up with the missing holiday data. Solar activity collapsed on the 13th when the sun spot count dropped to only 15, and further declined to only 12 by the 14th; this is the lowest level since February 12th 1988. Levels improved slowly and the count reached 67 by the 18th. The period meaned about 68. There has only been 1 flare of any note during the period, an M8.7/1B on the 18th, which was accompanied by types 2 and 4 radio wave sweeps. These are mainly in the HF region down to about 5MHz. Solar flux levels were up to 136 units on the 12th, but declined to only 88 units by the 15th. However levels were recovering by the 18th when they reached 106, the period averaged 105 units. The geomagnetic Ap index has been mainly unsettled throughout the period, but the 9th was up to a sub storm level of 32 units, and the period 13th to 15th was up to sub storm levels of 28 units. The period averaged 19.8

units. The state has been nil, nothing to report, all the period. The radio quality indices have declined almost every day from just normal down to very poor by the 18th; all circuits have at various times been down to very poor. This week we have not yet received the aa indices. The X-ray flux declined to the lowest levels so far since this data has been broadcast. On the 15th and 16th levels declined to only A7.8 but recovered to B2.0 by the 17th; the period averaged about B2.9.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon, declined and levels averaged 7.4MHz, though some days were down to 6.8MHz. The darkness hour lows averaged 3.0MHz and have not varied much day to day. The lows are now about 0400 hours but the highs are anything between 1200 hours up to 1900 hours varying considerably day to day.

Now the ionospheric data for the north:

Since the 10th April we are now getting the F2 daytime critical frequencies from Ekaterinberg again - it is not known why they stopped - so for the daily highs levels averaged 7.8MHz. The darkness hour lows averaged 3.1MHz.

And lastly the solar forecast:

This week it seems that a major restructuring is taking place on the sun and until this is established it is very difficult to say what is likely to happen. It looks likely that a more active part of the sun will be looking our way. Solar flux levels are likely to be about the 120s. Geomagnetic levels are expected to be just unsettled. Past history of the radio quality indices suggests that ionospheric conditions should be up to normal.

And that is the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 T O and G7 O V series, and Novice calls in the 2 0 A F and 2 1 B Q series.

You're listening to GB2RS, the news broadcasting service of the Radio Society of Great Britain, transmitting in the 80, 40, 6 and 2 metre bands.

> I have a quick question about AM modulation systems. I wondered why most
> broadcast transmitters modulate the final RF stage? Are there any
> disadvantages to modulating stages ior to the final RF stage.

This technique is used because it permits the final stage to run in class C, which is much more efficient than either the class A or AB "push-pull" required of a "linear" amplifier (which you would have to use to amplify an RF signal which had already been amplitude modulated). SSB transmitters are forced to use linear output stages, since it would be extremely difficult to generate an SSB signal by modulating the final.

The primary disadvantage is the need for a high-powered audio amplifier and a hefty modulation transformer. Given the popularity of SSB for amateur and utility operation, this form of modulation (usually called "plate modulation") is limited to AM broadcasters, both MW and SW.

Steve, TechnoLogic Concepts, 1803 Mission St., Suite 308i, Santa Cruz, CA 95060, has a kit for the ICOM-22S which allows it to cover 144.62 to 147.99 in 5KHz steps with 600KHz offsets...KG7BK

> I have a quick question about AM modulation systems. I wondered why most
>broadcast transmitters modulate the final RF stage? Are there any
>disadvantages to modulating stages prior to the final RF stage.
>Best Wishes,
>Henry.

Henry, modulating the final amplifier directly allows it to run in class C (nonlinear) mode with an efficiency approaching 75%. It is not true for FM, SSB or CW, but when you modulate your AM signal before you amplify it, you can only approach 25% efficiency with a class A linear amplifier or 50% with a class B linear amplifier. I laugh at the CBers who pay $75 for a twenty five watt linear amplifier, put their 5 watts of AM into it and get 5 watts of AM out of it. They're almost legal...Hi, Hi...KG7BK

I would like to publicly state here that Tim is one of the Good Guys. He sold me a 3SAT, and several _months_ later, after turning up the stock antenna in the back of a closet, he sent me that too, though he had already included a better antenna with the unit. The radio works great, too!

Unfortunately, the scenario given above seems to work less and less well. We have a problem here in LA with an uncoordinated repeater down in San Diego, and despite several _years_ of working with the Amateur Auxiliary, the various ARRL Section Managers and Division Directors, and the FCC, that repeater is still there and shows no signs of being at all inconvenienced, let alone being shut down. This is not a case of competing coordinating bodies, either, it's just a case of an interfering repeater that refuses to go away and which the FCC can't be bothered to shut down. They have bigger fish to fry, it seems.

I don't know what the solution is. It's been there for three years to date and is still blaring away. All the documentation and cooperation with the ARRL you

could ask for still hasn't done a thing. It would seem that the only remaining possibility is a phone call from a Congresscritter.

1383. Motorola Syntor Help Needed (mod)

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-25 05:56:11 UTC
From: mccoy39@wharton.upenn.edu
Message-ID: <1993Apr25.005611.1@wharton.upenn.edu>
Source record: 282749

In light of the fact there is similar discussions regarding similar radios
I thought maybe someone could help me.

I have some Motorola Syntor UHF (450Mhz) radios, I would like to use
them on the 440Mhz amateur band, as they would make great repeaters
However, I need info on modifying them. I realize I will probably need
a couple of coils and such, but I figured if someone else out there
has done this mod they could make my life MUCH easier. The trickiest
part is that the PROMS need to be burned for the correct freq. being as
the net is loaded with hackers of all kinds perhaps someone could assist
me in this?

Any information would be appreciated as to how difficult it is going to
be and such.

Thanks...

Paul Donnelly - KF7TH

This should probably be an FAQ.

The answer is that there is no way to prevent touch lamps from interfering with the HF bands, and there is also no way to prevent local RF from your rig from turning the lights on and off randomly.

It's a wonder that the FCC approved touch lamps anyway, since I would expect that most of them are in violation of part 15. They really are something of an abomination. I used to be able to pick up my neighbors' lamp all across the bands and he lives half a mile away on the other side of a hill. I DFed the thing, thinking it was a power line problem somewhere.

Has anyone had any dealings with W&W Associates? I have been looking for a gel cell to power my camcorder and they offer the Powerpac+ for HTs (12V) and for cell phones and camcorders (6V) with adaptors for specific equipment. I have a Quantum gel cell for my HT which I am very happy with, but after talking to them, they don't specifically make gel cells with adaptors for camcorders.

I would appreciate any information on the company and specifically on their Powerpac+ gel cell from anyone who has first-hand knowledge.

E-mail response is acceptable or a posting to the net.

Thanks in advance,

John Broughton

We are trying to hook up a link radio to an S-Com 5k controller.

Is the audio path on the second spare audio I/O full duplex?
In other words, will the audio we put in Input #2 loop around
and come back out Output #2? I hope not, otherwise we need
an outboard audio gate to make it half-dux.

You might reply via email.

Thanx!

Jim,
There is no specific offset for transmit/receive pairs for business/
public satefy VHF-Hi repeaters. Your best bet would be to look in a
scanner guide, and try to find a VHF-Hi frequency that is licenced to
the same agency, but only for mobile/portable operation. In my
experience, they are not always listed in the guides, though.

Well, there isn't too much bad with the no-code license. It's just when
they start screaming for extra priveledges on HF etc that it gets me a
little bit bent out of shape. As for the opposition to the no-code
license, well... if you look at QST roughly 10 years ago there's a
violent no-code stance in it.

> like band edges and a little operating knowledge to learn.

You're right on that. Even minimal exposure to electronics will allow
you to pass elements 2 and 3A. 3B isn't much worse, but 4A can get a
little hairy if you're not totally familiar with things like phase
angles, Thevenin's Theorem and the basic types of oscillators (Colpitts,
Hartely, etc...) but with a little bit of study, you can pass all the
written theory exams.

I've heard there's going to be a new theory test for licenses higher
than Technician.... they'll give you a box of parts and, without
instructions, ask you to construct a working transciever.

> Compare that to code which seems to need a half hour *every day* for several
> weeks.

Actually I did it in a more interesting way. I was on a 10 day camping
trip and had the 1A practice tapes with me. For five of the ten days it
rained and I was stuck in the tent. You guessed it, Every couple of
hours I'd give the tapes a listen and by the time those 5 days were up I
was able to copy at 5WPM pretty solidly.

> Rich, KD6GZW [yes, no-code, and no-particular-desire-to-learn-it-either]

Well, that's all well and good but please don't start screaming for HF
privs, that's what really pisses alot of people off.

Hmmm... not sure about VHF but I know on UHF public service freqs around
here they use the standard 5MHz offset. Ie. police channel 1
is 460.100 and the input is 465.100.

u1066579@csdvax.csd.unsw.edu.au writes:
> broadcast transmitters modulate the final RF stage? Are there any
> disadvantages to modulating stages prior to the final RF stage.

Yes, there are very GOOD reasons to modulate the final stage and not prior stages.

First, the efficiency of the final RF stage is an issue. If the final amp is modulated, it can run class "C", which is very efficient, but also NOT linear...on the order of 70% of input power comes out the back end to the antenna. The fidelity of the modulation is not affected by the final amp being driven class "C".

If the modulation is applied to a prior stage, then the ENTIRE signal, modulation (both side bands) *AND* the carrier must be applied to the control (grid) circuitry of the final stage and must be faithfully reproduced, which requires either a) linear class "A" amplifiers -- which are typically about 25% efficient ...yeah, LOTS of wasted power; or b) a "push-pull" class "B" amp, typically about 50% efficient.

Thus, by modulating earlier stages than the final RF Amp, the broadcaster increases his power bill dramatically, and sees absolutely NO benefit from it.

And, to show you what an "Old Buzzard" I am, I can not explain how a high power solid-state broadcasting transmitter would be modulated. However, for the Fire-Bottles technology with which I am familiar, the modulation is NOT on the control grid of the final amp...that is where the RF energy is input. Modulation is generally on the PLATE circuit, as close to the antenna as possible! ;^)

Hope that helps...

For those who are interested, the FCC does indeed care about cable leakage, particularly into the aviation nav band, or leakage that is "causing interference to other services".

Part 76.611 details specific limits to acceptable leakage, and measurement technique. If you will clearly document your problem, and measurement technique (a signal level meter with dipole is the normal approach, remember to correct between measurement data and microvolts per meter) and fax or mail the details to Mr. John Wong Cable Branch, FCC 1919 M st. NW Wash DC, and a copy of your letter to the local cable company, you will get results. In fact the cable company will probably start treating you much better when they realize you have figured out how to get the FCCs attention.

What is important is to document your case as it relates to the applicable rules. However the cable company *is required* to at least check out every complaint of leakage. They must file with the commission and maintain on premises a yearly measurement report that details the results of leakage testing.

But remember, call the cable company first, and give them a chance to work to correct the problem before contacting the commission.

I am in the business of measuring cable system leakage via the airborne method.

From: martinbw@jackatak.raider.net
Message-ID: <gJaL3B3w165w@jackatak.raider.net>
Source record: 282777

I returned last night from Dayton. It was an interesting trip. I was somewhat dissappointed by the ammount of not particularly HAM related junk at the flea market. I was dissapointed by the relativly few HF rigs for sale and way overpriced. About the only thing that really caught my attention is a new rig from TEN-TEC that will b avaialable in about a month. The TEN-TEC SCOUT Model 555 looks like just about the right rig for the right price. Details from their "slick" are listed below.

My biggest concerns for this rig CW & SSB only no AM or FM. Am I going to find this lack of AM & FM a serious shortcomming. Also will I be able to use my KAM+ with this rig to use RTTY, Packet, PACTOR, CW.

Also what module(s) should I start out with. My leaning is 20m, 40m, 10m. Or should I just save up and buy a TS-140, IC-737 or a Delta II. My thought is to get a SCOUT as a first rig and latter consider getting a more "Full featured" rig later. The SCOUT also seems to make a good mobile HF rig. Also, what antenna should I get. I am considering the MFJ-1796 halfwave vertical, the Cushcraft R7 halfwave vertical, or a GAP Challenger DX-VI. I live on a small lot with one scrawny tree and no room for a lot of wires or ground radials.

Any advice would be appreciated.

TEN-TEC SCOUT Model 555

Back to Basics - With Real Performance

SIMPLE: SSB or CW, just sit down and operate! Master every feature in a few minutes - no modern rig is as easy to use. Simply plug in the desired band module and work any band 160-10 meters including WARC.

SMALL: At half the size of other "small" transceivers, SCOUT makes mobile and portable operation a cinch. This travel companion even fits in a briefcase. Try that with other HF rigs!

SELECTIVE: Revolutionary, patented "Jones" filter. A variable bandwith 8 pole crystal filter from 500 Hz to 2.5 KHz. The right filter for every band condition at the turn of a knob. No need to buy expensive accessory filters.

POWERFUL: 50 watts output is enough power to work the world, even for a new ham. And power to spare for the skilled amateur. Runs directly off 12 volts, even the cigarette lighter in your car for

easy installation.

SMART: TEN-TEC's exclusive "FLS" frequency lock system keeps VFO virtually drift free regardless of temperature variations. THE "RISC" microprocessor running at 5 MIPS also manages the large digital display and built-in iambic keyer.

LOW PRICE: At $495, its closest competition is nearly twice the price. No other rig offers so much performance at so low a price.

SCOUT is "back to basics" and redefines value for the active amateur yearning for a second rig or the new ham searching for an affordable way to experience the world of HF communications.

FACTORY DIRECT $495.00

Additional Band Modules: $25.00 each

SCOUT ACCESSORIES:

Model 801, 160 meter plug-in band module

Model 802, 80 meter plug-in band module

Model 803, 40 meter plug-in band module

Model 804, 30 meter plug-in band module

Model 805, 20 meter plug-in band module

Model 806, 17 meter plug-in band module

Model 807, 15 meter plug-in band module

Model 808, 12 meter plug-in band module

Model 809, 10 meter plug-in band module (28.00-29.0 MHz)

Model 937, Power Supply - Matches SCOUT, 115 VAC, 60 Hz input. 13.8 VDC, 11 amp output @ 50% duty, 7 amp continuous. DC output binding posts, Fold-back current limiting, over voltage protection.

Model 297, Noise Blanker, effective on ignition and some impulse type line noise, field installable.

Model 296, Mobile bracket mounts on top or bottom of transceiver in 4 positions.

Model 607, Weighted key paddle, single paddle style with adjustable spacing.

Model 700C, Handheld mike, electret with coiled cord and 4 pin connector.

Model 291, 200 watt antenna tuner, "T" match circuit matches variety of unpalanced antenna systems.

GENERAL SPECIFICATIONS:

MODES: CW, LSB, USB (Normal sideband for the band in use)

FREQUENCY RANGE: All ham bands 160 through 10 meters available through plug in modules. Overshoot at upper and lower edges.

DISPLAY: 4 digit to 100 hz resolution, .56" LED

FREQUENCY CONTROL: Permeability tuned oscillator (PTO) mixed with a crystal oscillator for each band.

OFFSET TUNING: +/_ 1 KHz nominal - receive

FREQUENCY ACCURACY: +/- 100 HZ @ 25 deg. C

ANTENNA: 50 ohms unbalanced. POWER REQUIRED: @12-14 VDC; 600 mA receive, 10 A transmit @ 50 watts out, 4.5 A @ 5 wats out.

CONSTRUCTION: G10 epoxy glass boards, most field replaceable. Molded plastic front panel, aluminum chasis, steel top and bottom.

DIMENSIONS: HWD 2.5" x 7.25" x 9.75" - 6.4 x 18.4 x 24.8 cm

WEIGHT: 5lbs, 3 oz - 2.4 kg

TRANSMITTER:

RF OUTPUT: 50 watts, ALC controlled internal adjustment to reduce power.

DC INPUT: 125 watts maximum @ 14 volts 100% duty cycle for 5 minutes.

MICROPHINE INPUT: 200 to 50K ohms, accepts mirophines with 5 mv (-62db) output. Polarizing voltage provided for electrets.

T/R SWITCHING: PTT on SSB, QSK on CW

IAMBIC KEYER: Adjustable 5 - 50 WPM. Curtis type B, 15% fixed weighting.

CW OFFSET: 700 Hz

METERING: SWR or FWD power, rear panel switched.

SSB GENERATION: Balanced modulator, 8 pole crystal filter.

CARRIER SUPPRESSION: -45dB typical

UNWANTED SIDEBAND: -45 dB typical at 1.5 KHz tone.

THIRD ORDER INTERMOD: 30 dB below two tone @ 50 watts PEP.

RECEIVER:

SENSITIVITY: .35 UV typical for 10dB @ 2.4 KHz bandwidth.

SELECTIVITY: "Jones" 8 pole crystel filter front panel adjustable
500 Hz to 2.4 KHZ

DYNAMIC RANGE: 85 dB @ 2.4 KHz bandwidth at 20 KHz spacing.

THIRD ORDER INTERCEPT: +1 dBm

NOISE FLOOR: -126 dBm typical

S-METER: Calibrated for 50 uV at S9

I-F FREQUENCY: 6.144 MHz

NOISE BLANKER: Optional plug-in board

AUDIO: 1 watt @ 8 ohms with less than 2% distortion

SPEAKER: 3 inch

In article <RFM.93Apr24165314@urth.eng.sun.com> rfm@urth.eng.sun.com (Richard McAllister) writes:

>Compare that to code which seems to need a half hour *every day* for several >weeks.

well, that's a bit of an exaggeration.... when I took my Novice class (geez, almost 10 years ago, now), we met once/week during the Fall semester (probably started about mid-way through the semester) at Texas A&M my freshman year. I never had time to touch code outside of class. anyways, by the end of the class, we were all copying 10 wpm code comfortably (the instructor didn't tell us this until after the test...which, btw, he didn't tell us was the test, either...but he was gradually increasing the code speed each week). I remember quite clearly that if anyone failed, it was on the written test the following week...not one single person failed the cw test.

this is not intended to say that people who go for the no-code license are in any way lazy, or lack the initiative to ``go the extra mile'' ... I don't personally support such comments AT ALL. the only thing I'm trying to say here is that with a good instructor, 1/2 hour per WEEK, for several weeks, is all it really takes.

of course, when I started going for my general class, I worked an average of 30 minutes of cw per day (on air), but that was purely by choice (I got hooked pretty quick). and, when I took the code test, I almost passed the 20 wpm test, and almost fell asleep during the 13 wpm test (which, a few months later, happened to me at 20 to 25 wpm...I used to *LIVE* on the 30m band).

the key (no pun intended...sorry) is learning to recognize the SOUNDS and HEAR the letters, as opposed to trying to think along the lines of ``ok, let's see... DIT DAH---that's a dot and a dash, which is, ummm, 'A'....'' the way we were taught was to hear 'A' when DIT DAH was keyed.

>Rich, KD6GZW [yes, no-code, and no-particular-desire-to-learn-it-either]

wait a minute.... I thought the no-code technician license was getting a 1x3 call, just like the w/ code technician and general class folks. doesn't a 2x3 call mean that you started out as a novice? and if so, doesn't that imply that you passed the cw portion? I'm confused (not unusual when talking about the no-code license...I was a general before it even existed, and I've never really looked at the regs for it).

later,

ASTRA-1C Antenna Damaged Delays ARSENE Launch Until Early May

The AMSAT News Service (ANS) has recieved information from F6BVP that the launch of the ARSENE-OSCAR satellite has been delayed until early May. Although the details are rather sketchy right now, it appears that an omni-direction antenna was damaged on the main payload, ASTRA-1C, during handling. At the present time, the ASTRA-1C satellite manufacturer, HUGHS, is making a determination how best to proceed with the repair and/or replacement. The first estimates of the repair and/or replacement of the ASTRA-1C antenna show it might be anywhere from 10 days to 3 weeks. The length of the delay depends on whether the antenna can be repaired or it has to be replaced. As soon as this information becomes available, F6BVP will make it known to the entire amateur radio community as quickly as possible. Please stay tunned to the AMSAT News Service (ANS) bulletins for any further updates on the launch of the ARSENE satellite.

[The ANS would like to thank Bernard Pidoux (F6BVP), RACE Vice President for International Public Relations, for the information which went into this bulletin item.]

STS-56/SAREX Mission Launch Set For 26-APR-1993

The second Shuttle Amateur Radio Experiment (SAREX) is planned to lift off on 26-APR-93 at 14:52 UTC. This mission will utilize a the 2M voice/packet configuration of the SAREX payload. The following is the initial orbital elements for this mission and additional information about the mission from Frank Bauer (KA3HDO):

1 00055U 93116.66861589 .00120200 00000-0 36300-3 0 79
2 00055 28.4697 268.5815 0003812 314.2100 45.8202 15.90487610 22

Satellite: STS-55
Catalog number: 00055
Epoch time: 93116.66861589 = (26-APR-93 16:04:48.41 UTC)
Element set: JSC-007
Inclination: 28.4697 deg
RA of node: 268.5815 deg Space Shuttle Flight STS-55
Eccentricity: .0003812 Prelaunch Keplerian Elements
Arg of perigee: 314.2100 deg Launch: 26-APR-93 14:50 UTC
Mean anomaly: 45.8202 deg
Mean motion: 15.90487610 rev/day G.L. Carman (WA5NOM)
Decay rate: 1.2020e-03 rev/day*2 NASA Johnson Space Center
Epoch rev: 2

The seven person crew on STS-55 includes ham radio operators Steve Nagel (N5RAW), Jerry Ross (N5SCW), Charlie Precourt (KB5YSQ), Hans Schlegel, (DG1KIH) and Ulrich Walter (DG1KIM). SAREX operations planned on this flight includes 2M voice and packet. The primary voice callsign will be N5RAW. The packet radio callsign is W5RRR-1.

The 2M FM voice and packet downlinks for the SAREX station are on 145.550 MHz.

Uplinks are: Voice Packet

Europe 144.80 144.49
144.75
144.70

Rest of World 144.99 144.49
144.97
144.95
144.93
144.91

Note: The crew will not favor any specific voice uplink frequency, so your ability to communicate with SAREX will be the "luck of the draw."

For all operations, Earth stations should listen to the downlink frequency and transmit only when the Shuttle is in range and the astronauts are on the air. Listen for any instructions from the astronauts as to specific uplink frequencies in use during the current pass. Also, listen to the uplink frequencies before transmitting to avoid interference to other users.

In addition to the U.S. SAREX ham gear in the Shuttle mid-deck, an additional ham radio station will be flown in the German spacelab module. This station, designated SAFEX (for Spacelab Amateurfunk-Experiment), includes a 2M FM downlink and a 70CM FM uplink capability. A dual band (2M/70CM) external antenna, mounted on the German spacelab module, will be used for SAFEX contacts. Payload Specialists Schlegel and Walter expect to make a few scheduled contacts with European schools with this equipment.

The externally mounted SAFEX antenna gives the SAREX team an opportunity to compare the performance of the U.S. SAREX window mounted antenna to an externally mounted antenna. A special A/B antenna test is planned on orbits 61 and 62 using the normal SAREX downlink frequency, 145.550 MHz. During orbit 61 the crew will transmit using the SAREX window antenna and on orbit 62 the crew will use the SAFEX external antenna. Individuals in the Southeastern U.S. are welcome to help participate in this test by taking signal strength readings of the received signal for both orbit passes.

[The AMSAT News Service (ANS) would like to thank Frank Bauer (KA3HDO) for this bulletin item.]

SB SAT @ AMSAT $ANS-114.03
DUAL-HOP TEST PLANNED FOR AO-21

HR AMSAT NEWS SERVICE BULLETIN 114.03 FROM AMSAT HQ
SILVER SPRING, MD APRIL 24, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-114.03

Another Dual-Hop Test Planned Between AO-21 And RS-10 For 16-MAY-93

Another transatlantic dual-hop (DoHop) opportunity between RS-14/AO-21, Mode B, and RS-10, Mode A, is expected to take place on 16-MAY-93 from 16:22:12 to 16:27:32 UTC. In addition, the following orbit (at approximately 18:04-18:11 UTC depending upon your location) will provide an outstanding opportunity for DoHop contacts over much of North America. The Russian Ground Command station has been requested to switch RS-14/AO-21 to Mode B, Transponder 2, during these orbits as well as several earlier ones during which there will be DoHop opportunities for European stations.

Stations wishing to participate by transmitting are asked to uplink to RS-14/AO-21 using CW or LSB between 435.100 and 435.110 MHz, holding your uplink frequency constant. Call CQ DoHop or otherwise identify each transmission as DoHop. DoHop signals are likely to be much weaker than those from stations uplinking to RS-10 on 145 MHz; it will thus be appreciated if all stations refrain from uplinking to RS-10 on 2M during the few minutes of the DoHop tests in order to keep RS-10's sensitivity as high as possible; instead, please listen for DoHop stations on RS-10, Mode A.

North American stations please report results via packet to W2RS @ WA2SNA.#NJ.USA.NA or via Internet to w2rs@amsat.org, and those in the UK and Europe to G0NKA @ GB7DTX.#26.GBR.EU.

[The AMSAT News Service (ANS) would like to thank Ray Soifer (W2RS) for this bulletin item.

SB SAT @ AMSAT $ANS-114.04
AMSAT OPS NET SCHEDULE

HR AMSAT NEWS SERVICE BULLETIN 114.04 FROM AMSAT HQ
SILVER SPRING, MD APRIL 24, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-114.04

AMSAT Operations Net Schedule

AMSAT Operations Nets are planned for the following times. Mode B Nets are conducted on AO-13 on a downlink frequency of 145.950 MHz and Mode J/L on a downlink of 435.970 MHz.

Date UTC Mode Phs NCS Alt NCS

02-May-93 0000 J 135 W9ODI N7NQM
9-May-93 0030 B 65 W5IU WA5ZIB
15-May-93 2030 B 148 WJ9F VE2LVC

Any stations with information on current events would be most welcome. Also, those interested in discussing technical issues or who have questions about any particular aspect of OSCAR statellite operations are encouraged to join the OPS Nets. In the unlikely event that either the Net Control Station (NCS) or the alternate do not call on frequency, any participant is invited to act as the NCS.

****

Slow Scan Television on AO-13

SSTV sessions will be held on Saturdays and Sundays UTC:

Mode J Downlink 435.980 MHz
Mode B after J Downlink 145.960 MHz

OPS NETS will take priority, look for SSTV activity immediately after the net. SSTVer's are invited to join the Net to make schedules at other times if desired.

/EX
SB SAT @ AMSAT $ANS-114.05
PHASE-3D INITIAL BANDPLAN

HR AMSAT NEWS SERVICE BULLETIN 114.05 FROM AMSAT HQ
SILVER SPRING, MD APRIL 24 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-114.05

PHASE-3D Satellite Frequencies

At the Phase-3D transponder meeting in Muenchen, Germany the following frequencies were chosen for the Phase-3D satellite:

Downlink frequencies (Satellite-to-Earth)

1. 10 GHz (3CM) 10.451000 - 10.451500 GHz
2. 2.4 GHz (13CM) 2400.500 - 2400.900 MHz
3. 435 MHz (70CM) 436.000 - 436.400 MHz

4. 29 MHz (10M) 29.310/29.320/29.330/29.340/29.350 MHz
one frequency selected by the control station.

Uplink frequencies (Earth-to-Satellite)

1. 1.2 GHz (23CM) A: 1269.000 - 1269.500 MHz
B: 1269.500 - 1270.000 MHz
2. 435 MHz (70CM) A: 435.200 - 435.700 MHz
B: 436.000 - 436.500 MHz
3. 145 MHz (2M) 145.800 - 145.975 MHz

All bands except the 29 MHz band are switched in a matrix and allow any configuration of operational modes. Minor last minute changes or additions are still possible if necessary depending on transponder builders. A more detailed frequency plan will be distributed as soon as all final technical details are available.

[The AMSAT NEWS SERVICE (ANS) would like to thank Freddy de Guchteneire (ON6UG), IARU Satellite Coordinator, for the information which went into this bulletin item.]

> difference between the Pro-2006 & the Pro-2006A?
> Chris

How to tell the new from the old Pro-2006's:

On front panel, old has "DIMMER," new has "LIGHT."
On back of case, old is model 20-145, new is model 20-145A.

The place that advertises in QST with an 800 number (they don't give
their name, but they have an address near Dallas) does not have any of
the old 2006's left. BTW, they answer the phone "Radio Shack!"

(Not that I plan to listen to cellular, just that I think that a
scanner with a deliberate hole in it's coverage is BROKEN!)

1409. Icom IC-H16 mods?

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-26 05:29:49 UTC
From: am357@yfn.ysu.edu
Message-ID: <1rfs0d$mti@news.ysu.edu>
Source record: 282769

Does anybody know if there are any mods for the Icom IC-H16.
I have heard that there is a book that describes some sort of
possible modifications for the radio. If you know what they
do, could you possibly describe their function or post them
for me. Thanks!

Matt Adair am357@yfn.ysu.edu

1410. repeaters along travel route

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-26 05:36:30 UTC
From: jason@studsys.mscs.mu.edu
Message-ID: <9304260536.AA29690@studsys.mscs.mu.edu>
Source record: 282770

Well, I am planning a little trip for the beginning of June. The general plan is Wisconsin to San Francisco, and back, via Los Angeles.

The following is my tentative route. Please provide any info on must-see spots along the route, suggestions/comments on route, alternative routes, and MOST IMPORTANTLY, known speed traps on route:

I am also looking for info on GOOD coverage 2m repeaters along here:

U.S.151 Dubuque, IA to Cedar Rapids, IA
I-380 Cedar Rapids to Iowa City, IA
I-80 Iowa City through Des Moines, Omaha (NE), Lincoln (NE), Grand Island (NE), North Platte (NE)
I-76 Ogalla, NE to Denver, CO
I-70 Denver through Grand Junction (CO) to Salina, UT
U.S.50 Salina through Ely (NV), Austin (NV) to Reno, NV
I-80 Reno, NV through Sacramento (CA) to San Francisco, CA
CA.1 Monterey, CA to San Luis Obispo, CA
U.S.101 San Luis Obispo to Los Angeles, CA
I-15 Los Angeles to Barstow, CA
I-40 Barstow through Grand Canyon area (AZ), Flagstaff (AZ), Albuquerque (NM), Amarillo (TX) to Oklahoma City, OK
I-44 Oklahoma City through Tulsa (OK) to St. Louis, MO
I-55 St. Louis to Chicago, IL

Okay, that is the tentative route and I have about 9-10 days. Anything you'd like to add is appreciated!

Thanks... Jason
P.S. Is it worth the extra 100 miles to take I-80 through SLC and Provo and across the Nevada desert, or is the U.S.50 thing a good idea?

General note: I will have a 45 watt Alinco with probably a 1/4 wave antenna...

>have a problem with no-code licensees who scream for this and that
>without making the effort to upgrade.

Glad to hear that. I made the effort and I *still* think the code
requirement is a crock.

>It also depends on what area of the country you're in. I know out here,
>2m has become the CB of the ham bands. And hey, look at Britain where
>they won't allow their entry class licensees access to 144-146MHz
>because of "Congestion and poor operating practices.".

Right, and learning the code somehow instills good operating practices. I
guess those NALs the FCC has been handing out recently and the nonsense on
14.313 are examples of "good operating practices". Please provide one
single shred of proof that learning morse code improves operating
practices.

I suppose the no-code bashing that seems to emanate from your system is
another example of the "good operating practices" you're hoping to find?

73,
Todd

NTMS Feedpoint comes out 6 times a year. They sponsor the Microwave
Update, but it is a local club in many repects--monthly meetings and
tune-up sessions for getting the gear running.

BTW Wondering about the Eastern VHF/UHF conference? Latest
rumors heard on 2 meter SSB indicate that the conference has been
postponed to mid-summer. It will probably be held around the
Springfield MA area.

>What is the price for such a filter??
>
>Any reactions welcome!

I doubt you can afford to buy one, though I have an idea
how to build one. First off, you need very high Q crystals,
probably around 300,000 or better to really make this work.
While I've heard it is possible to get crystals made with
Qs in excess of a million, I've also heard they don't like
to make such crystals. It might be related to stability--a
rough rule of thump is to cut your crystals to an accuracy of
1/10th you bandwidth--240 Hz in this case (3.2 ppm).
(for reference, cheap crystals are often one order of magnitude
worse with regard to both Q and frequency accuracy).

The only practical way I see to manage both is to tell your
crystal maker to forget about the exact frequency--tell them you
intend to put each crystal in an oven that will be set to just
the right temperature to get the frequency you want. This will
allow them to concentrate on getting the high Q crystals you
want.

Then, having the crystals, you can measure them and design your
filter. You should expect to have to re-calibrate the ovens to
compensate for aging and similar effects over time. You might
also figure out what you might do with the crystals if this
doesn't work :-).

I seem to remember someone advertising a machine readable index to some ham radio magazines. Now that I am looking for it, I can't find it.

Does anyone have any pointers to consolidated or individual indexes to the amateur radio literature?

Thanks

Bill

THE MAJOR NEWS ITEMS THIS WEEK

AGM and Divisional Council Elections
ANZAC Day Holiday
C.A.A. "Trash 'n' Treaure" Sale
Space News
Special Event Station
A Request from the Divisional Librarian

DIVISIONAL NEWS

The Divisional AGM will take place on Sunday, 9th May. The
meeting will be at Amateur Radio House, 109 Wigram Street,
Parramatta, starting at 2pm.

Please note that smoking will not be permitted at the AGM.
At a recent Council meeting, it was re-affirmed that, in
line with common practice now being exercised in the
community, smoking is not to occur within the confines of
any Divisional Institute building. Visitors to the
Parramatta and Dural properties will be aware that "No
Smoking" signs have been displayed at these locations for
some years.

We've been advised by Roger Harrison VK2ZTB, that the
winners of the VK2 membership promotion will be drawn at the
AGM. Two lucky members will walk away from the AGM with a
new rig (if they come to the meeting, that is).

On Wednesday evening, seven of the 12 candidates standing
for Divisional Council were able to attend the Parramatta
Office, to talk with members and answer their questions.

This week, one of the candidates posted to the packet
network a modified ballot paper, with members of the
so-called "A Team" highlighted. Please note that any views
expressed in that bulletin are those of the candidate, and
do not necessarily reflect the official policy of the
outgoing Divisional Council or the WIA.

DIVISIONAL BALLOT PAPERS

On Wednesday 21st April, 1535 ballot papers and instructions, along with return envelopes, were posted to members of the New South Wales Division of the Wireless Institute of Australia.

These ballot papers should have already arrived, or will arrive early next week. If you have not received your ballot paper by Wednesday, please phone the Returning Officer - Peter O'Connell VK2EMU - on (02) 580-4985 and leave a message on his answering machine. A second ballot paper will be sent to you.

Please remember that completed ballot papers must be returned to the Divisional Office by last post on Friday, 7th May, or delivered by hand up until 4pm on Saturday 8th May. The Divisional Office will be open on Saturday, 8th May from 12:00 noon until 4:00pm.

Place your ballot paper in the smaller of the two envelopes provided: the one marked "BALLOT PAPER". Then, place this envelope in the larger, outer, envelope.

If you are returning a proxy form with your ballot paper, place the proxy in the OUTER envelope. Do NOT place your proxy form inside the smaller envelope with your ballot paper.

-- Peter O'Connell VK2EMU - Divisional Returning Officer.
Once again, Peter's phone number is (02) 580-4985.

NEW MEMBERS

At the last Divisional Council meeting, two new members of the NSW Division were accepted. They were:

Allan Jackson VK2DAM
John Vittorio VK2MMX

Please join us in welcoming these new members to the oldest Division of the oldest Amateur Radio Society in the world.

ANZAC HOLIDAY

Monday, 26th April, has been designated a public holiday, in connection with Anzac Day, which this year falls on a Sunday. The Divisional Office will be closed on Monday, but will reopen for business on Tuesday, the 27th May.

C.A.A. TRASH 'N' TREASURE SALE

Another era is almost ended, with the Civil Aviation Authority's "Trash 'n' Treasure" spree. Later this week, there will be a massive 3-day auction to reduce the level of stock and spares held by the Civil Aviation Authority.

The "tossout" is taking place, largely because many CAA facilities have been closed, so out go transmitters and receivers from HF through to UHF, test equipment, and other items grouped into over 2000 lots.

Members may obtain further details of times and location from the Divisional Office, when it reopens on Tuesday.

PARKES RADIO TELESCOPE DISH

Graham Dalglish VK2DIG reminds us that the NSW Division has been offered an 18 metre dish from the AUSTRALIAN NATIONAL TELESCOPE FACILITY at Parkes. Graham says the dish is in excellent condition, would operate on frequencies up to 3 Gigahertz, and has an excellent drive mechanism.

Graham will be raising for discussion at AGM:

(i) possible uses for the dish, such as moonbounce and satellite work, etc.

(ii) where to site the dish and associated problems.

(iii) technical support, skills and interest within the WIA membership.

(iv) obtaining sponsorship to cover the cost of relocating the dish.

Graham asks that members interested in this project make their thoughts known to Council, or by contacting him on (046) 772-477.

-- Graham Dalglish VK2DIG

SPACE NEWS

Last Monday, at the Adelaide International Expo, special event station VI5MIR, operating from a replica of the Mir space station, made contact with the REAL Mir.

Tony VK5WC, who was running the station at the time, and two young Russian-speaking children, were delighted to be able to speak to Alex R2MIR on board the space station.

Many members of the general public, and several licensed Radio Amateurs, visited the station which was set up right alongside the replica MIR. A number of messages of goodwill were also sent up to MIR via packet radio.

The special event station is again active this weekend until Monday 26th April.

Congratulations Tony for making the contact, and well done creating some good publicity for Amateur Radio.

-- Glen Sawyer VK5ZCF.

Still with Mir, Alex R2MIR has requested Amateurs NOT to send packet mail to the SAREX station W5RRR, as the volume of packet mail is preventing him from contacting the Shuttle. Also, messages to Mir's packet station R2MIR-1 should be sent only in Russian. Messages in other languages will be deleted from the PMS.

- Translated from Russian by Dave N6JLH, and sent to us by John VK2GJB

Pre-flight checks are continuing on the packet radio relay satellite, ARSENE, and the launch still looks set to go ahead on Friday, 30th April.

For those of you who'd like to experiment with ARSENE, here's a list of the transponder frequencies.

Uplink frequencies:
435.050, 435.100, and 435.150 MHz

Downlink frequencies:
145.975 and 2446.500 MHz

ARSENE will be a mainly packet radio "relay" satellite; it does have bulletin board system (BBS) capability. The uplink frequencies will only accept AX.25 1200 baud FSK packet.

However, in "mode S", you can transmit on 435.100 MHz and listen to your signal on the 2446.500 MHz downlink, and so this transponder can be used for CW or SSB contacts.

-- Bernard F6BVP and the AMSAT News Service, with translation by N5KNX

More information about how to use the ARSENE satellite will appear shortly in "Amateur Radio" magazine.

SPECIAL EVENT STATION

Next month, the Delta Amateur Radio Club of Memphis, Tennessee will be activating Special Event station W4BS, to commemorate the 50th anniversary of the final mission flown by the world famous B-17 bomber "MEMPHIS BELLE". That mission was flown on 17th May, 1943.

The station will be active from 1300 Z on 16th May, until 0100 Z on the 17th. The transceivers will be set up in the pavilion next to the "BELLE" on Mud Island in Memphis, Tennessee. The HF frequencies used will be 14.305, 21.320, and 28.455 MHz.

For a QSL card and certificate, send your QSL card to:

MEMPHIS BELLE
c/o DARC

P.O. Box 16343
Memphis, TN 38186-0343
USA

-- ZL4HG

LIBRARY REQUEST

We've had a request for two magazine articles. Perhaps you can help us out.

The first is entitled "The Search for the Low Band DX Antenna" on pages 44 and 45 of the August 1989 issue of CQ magazine.

The second is "Low Noise Co-axial Link Antenna for HF Receiving", in the December 1987 issue of CQ magazine.

To complete the Divisional Library's coverage of CQ magazine, we need all the issues from 1986 through to 1989, and the January to June issues of 1990. Any donations will be gratefully accepted.

-- Aub Topp VK2AXT, VK2 Divisional Librarian

WICEN NEWS

At the WICEN Sydney North AGM, held last Wednesday, David Ramsay VK2KLX was elected as Sydney North Regional Coordinator, following the retirement of Barry White VK2AAB. WICEN thanks Barry for his sterling service on behalf of the Sydney North region. Dave Horsfall VK2KFU was re-elected as Deputy Regional Coordinator.

There was some discussion afterwards, and in particular the point was made of the importance of Coordinators returning the VRA time-sheets for all activities conducted on behalf of WICEN. (News from James VK2GVA.)

Looking ahead, the annual Goulburn Conference is on the weekend of 15-16th May, and all WICEN personnel are invited to attend. Also on the same weekend is a Car Rally in the Central Coast area, and Dave VK2UDT is looking for volunteers.

A Disaster Management Course is on the weekend of 22nd-23rd May, for which Barry VK2AAB is taking applications.

WICEN is always looking for members to provide the community with communications assistance when required. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065, or come up on the regular Sydney WICEN net, on Thursday nights at 9.30pm on repeater 7150.

-- Dave VK2KFU, WICEN (NSW) Publicity Officer

IPS WEEKLY REPORT

16 April - 22 April 1993

Issue no.: 17
Date of issue: 23 April 1993

Date 16 17 18 19 20 21 22
10cm 90 96 106 111 119 119 117
A 16 10 23 10 22 25 (14 estimated)
T 39 51 46 56 72 87 78

Summary of activity

Solar activity was very low April 16th-17th, and 20th-21st, low on the 19th, moderate on 22nd, and high on 18th. An M8 flare was recorded on the 18th, and an M1 flare on the 22nd.

The geomagnetic field at Learmonth (WA) was mostly quiet to unsettled, reaching active levels on the 18th and 20th April. On the 21st, the field was at unsettled to minor storm levels, and again quiet to unsettled with brief active levels on the 22nd.

Ionospheric F2 critical frequencies at Sydney were depressed by up to 30 per cent from the 16th until sunrise on the 19th. They were then near predicted monthly values until 1400 UTC on the 22nd, when frequencies again became depressed by up to 30 per cent, returning to near normal at 2000 UTC.

Strong spread F was observed at night on 18th, and the 22nd.

Forecast for the next week (23 - 29 April)

Solar: Low.

Geomagnetic: Quiet to unsettled.

Ionospheric: Near predicted monthly values. Note that a significant geomagnetic/ionospheric
disturbance is expected on May 1 and 2.

-- Courtesy of IPS Radio and Space Services

CLUB NEWS

On Saturday, 1st May, the MID SOUTH COAST AMATEUR RADIO CLUB will hold its quarterly family gathering, barbeque, and meeting. The venue is the Hancock Ranch, Little Forest Road, Milton. Turn inland off the Prince's Highway 3 kms north of Milton and follow the "H" Ranch signs.

The club provides barbeque facilities, tea, coffee, and afternoon tea. Why not bring the whole family? There is also a possibility that a selection of books from the Divisional Bookshop may be available. For more information about the meeting, please phone Ben VK2AJE on (044) 57-3220.

-- Ben VK2AJE, Honorary Secretary

The Annual General Meeting of the ST GEORGE AMATEUR RADIO SOCIETY will be held at the usual venue, that is in the 1st Allawah Scout Hall, corner of Bellevue Parade and Blakesley Road, South Hurstville. The meeting is on Wednesday evening 5th May, and starts at 7:30pm.

All club members are requested to attend this very important function. Financial members who are unable to attend may cast their votes by proxy. These proxy votes must be in writing, and in the hands of the person exercising the proxy at the time of the meeting. They must also be available for inspection by the meeting chairman if required.

-- Allan VK2XF, St George Publicity Officer

Members and friends of the RADIO AMATEURS OLD TIMERS CLUB are reminded that the next series of nets and callback will take place on Monday, 3rd May.

Times and frequencies will be as follows:
10:00 am "Melbourne Time" (more commonly known as
"Australian Eastern Standard Time") or 2400 Z:

145.700 MHz FM and 7.060 MHz LSB

11:00 am, or 0100 Z:
14.050 MHz USB, beaming north from Melbourne

12:00 noon, or 0200 Z:
14.050 MHz USB, beaming west from Melbourne

and in the evening at 8:30 pm, 1030 Z:
3.635 MHz

News items for inclusion in the club nets can be sent to Secretary Arthur Evans VK3VQ, or Allan Doble VK3AMD, who are both listed in the call book.

-- Allan Doble VK3AMD

Now, an early reminder of the AGM of the ORANA REGION RADIO CLUB, which will be held on Tuesday 25th May starting at 8pm. The meeting venue will be the Dubbo Rescue Squad Building, Cobra Street, DUBBO.

All members are invited to attend and support the Club that supports the voice and packet repeaters in the area. More details as the date gets closer.

-- John VK2JH, President.

Finally, a reminder from the AUSTRALIAN AMATEUR TELEVISION CLUB that, due to clashes with other events, the club's meetings at Parramatta for May and June are on the 1st Sunday of the month, instead of the second. The next club meeting is on next Sunday.

BROADCAST ROSTER

Next Sunday morning: Roger VK2ZIG and Peter VK2JPJ
Next Sunday evening: Tony VK2ZLT and Peter VK2EMU

The duty councillor at Amateur Radio House this Wedesday is Tim VK2ZTM. The divisional office is open from 11am to 2pm, Monday to Friday, and 7 to 9pm Wednesday nights. The phone is answered from 12 noon to 1pm during the day, and you can leave a message on the answering machine outside these hours.

News highlights are also available on the divisional voice mailbox on (02) 552-5188, and you can leave a message afterwards if you wish.

Items for inclusion in this bulletin may be sent by mail to Post Office Box 1066, Parramatta 2124; by fax on (02)

633-1525, or by packet radio to "VK2WI at VK2RWI", to reach
us by 7pm on the Friday prior to the broadcast.

1417. Re: TOUCH LAMP INTERFERENCE

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-26 13:30:38 UTC
From: ehare@arrl.org
Message-ID: <1409@arrl.org>
Source record: 282689

In rec.radio.amateur.misc, marcbg@feenix.metronet.com (Marc Grant) writes:

>Help! I've got two touch-sensitive desk lamps in my bedroom that
>absolutely wreak havoc on my HF rig! I have to unplug them so that I can
>work! My wife loves the lamps, so I'd like to find a way to eliminate the
>noise - any suggestions???????

From the ARRL Information Server (info@arrl.org):

ARRL RF Touch Lamps Information Package

RF Touch lamps are RF-operated devices that often cause, or are susceptible to , EMI problems. They have a free running oscillator that is very broad and rich in harmonic energy. This oscillator is hooked up to a touch plate that changes the frequency of the oscillator when a hand is placed near the plate. Unfortunately, this plate also acts as an antenna, radiating some of the energy of the oscillator, or picking up nearby radio signals. When the former happens, it can interfere with other services. When the latter happens, the circuitry inside the lamp reacts the same way that it would when the plate is touched -- the lamp changes states from "off" to "on".

Although cases of moderate interference can sometimes be cured by using a "brute-force" type AC-line filter and/or a common-mode choke (see the ARRL Book, Radio Frequency Interference -- How to Find It and Fix It for more information about AC-line filters and common-mode chokes) most cases will require internal modification to the lamp. For a number of different reasons (you may be blamed if anything EVER goes wrong with the lamp or house wiring) you do not want to perform this modification on equipment that is not your own. Remember -- house AC power is dangerous. These modifications must only be performed by qualified service personnel!

Here are some reprints from QST "Hints and Kinks":

RFI and Touch-Controlled Lamps. I have found a simple cure for those touch-controlled lamps that turn themselves on and off during nearby radio tranmissions. In my case, 40-meter operation gave the most rouble, with 75-meter operation a close second. Higher frequencies presented no problem. (I use a ground-mounted vertical antenna for 80, 40 and 15 meters, and the lamp is approximately 150 feet from the antenna. An AC-line filter at the lam did not eliminate the problem.)

A 1-kohm resistor (in series with the signal input lead to the encapsulated circuit that operates the lamp) cured the problem for me. I suppose the required resistor value would vary with the RF-field intensity and frequency. -- John M. Adams, W7OTC, Sun City, CA

More on RFI to Touch-Controlled Lamps. I had the same problems as W7OTC with a touch-controlled lamp switched on and off by my transmissions (100 W to a roof-mounted vertical, with two radials per band). The problem occurred during operation on the 80- through 15-m bands, but 10-m operation had no effect. A 1-kohm resistor was not a complete cure in my case.

A 3.3-kohm resistor in series with the signal input on the lamp helped on all bands except 80 m (an additional 1.8kohm prevented the lamp from functioning). When the resistor was replaced with an RF choke (100 uH, 139 mA), the problem abated on all bands except for 80 m. On 80 m, the interering signal was considerably attenuated by the chokd, but the lamp still switched. The choke alone may be enough to clear up the problem in some cases.

The final answer turned out to be both the RF choke and a 1.8kohm resistor in series with the signal-input lead to the touch-control circuit. -- Colin Hall, G4JPZ/W6, Marina Del Rey, CA

Touch-Lamp Transceiver. When my wife told me she had bought a three-way lamp that switched on and off at the touch of any of its metallic parts, i did not realize she had purchased a transeiver. I found that my transmitted signal would cause the lamp to operate exactly as if I had touched its metal parts. Later I discovered a raspy, S8 signal at 1875 kHz -- it was coming from the lamp, which was located three rooms away on a different AC circuit. The lamp signal is present from 40 meters down. At frequencies from 20 meters up, my operation is undisturbed.

A box inside the lam contains a circuit board through which AC line voltage is routed and which has a wire connected to the metal base of the lamp. WHen the lamp is plugged in, the lam signal is present at all times, regardless of whether the lamp is on or off. In my attempts to eliminate the interference, I tried a commercial AC filter, coiling the lamp cord on some ferrite material and other such approaches with out success.

To make sure the lamp my wife had was not defective, I borrowed a similar lamp from a neighbor to try it. I found it to perform in exactly the same manner except that the frequency of oscillation was somewhat different. There is no manufacturer or distributor name on the lamp or packing container. The lamp was made in Taiwan.

I am writing so that others who may be experiencing similar difficulties may have soem idea of the probable source of interference. After I described what I discovered to a ham friend,

he realized that such a unit had been causing interference to his station for more than a month. -- Cal Enix, W8EN, 209 S Kalamazoo St, White Pigeon, MI 49099

If these cures don't work, it may be possible to shield the electronic switch module, but this must be done safely! You may also want to contact the manufacturer and send a report of your problem to ARRL Headquarters RFI Desk, 225 Main St. Newington CT 06111.

If you come up with a better solution for this problem, please write to the RFI Desk with the solution. It sounds like it would be a good candiate for Hints and Kinks!

>it even existed, and I've never really looked at the regs for it).

Whenever all call signs for a particular class have been given out, new licensees are issued call signs of the next "lower" class of license. In some call areas such as 6 land they have run out of 1x3 calls for generals and technicians, so both of those classes get 2x3 calls along with the novices.

I took my FT757 with me one trip to the UK and declared it to the guy in the Red customs lane, he asked if I was taking it out of the country after my visit and I assured him I was - "have a nice stay" was his response.

The biggest hassle was I couldnt turn it on for the security guys at IAH but they finally let me through.So next time I'll put any equipment in my checked luggage not in my briefcase.

Customs have no interest in whether you have a valid licence but more in the money they can rip off if you import stuff.They probably view complex electronics in the same light as laptop computers and video cameras.

But its always best to check with the customs guys - the Red lane is pretty quick too as few people want to declare stuff and unless the guy in front of you is trying to get his bale of best algerian through as alfalfa samples it should be efficient.

Have a good trip,

One of the local repeater clubs in our area is passing out bumper
stickers. They had a bumper-sticker design contest "advertised"
over the air (on the repeater). About 10 different designs were
voted on at the last meeting.

The sticker says something like...

"Tune in to high-tech amateur radio!"

A person's hand is shown gripping an HT with lightning bolts flying out
of the antenna. Pretty cool! All the club members have one (at least)
on their car. The repeater's output frequency is also on the sticker.

1421. DAYTON!!!

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-26 14:32:22 UTC
From: ham@wam.umd.edu
Message-ID: <1993Apr26.143222.1590@wam.umd.edu>
Source record: 282690

I have been a ham for 8-1/2 years, and I am 24 years old, and I have never
been to Dayton before this year. I have only one thing to say:

YEEEEEEEEEEEEEEEEEEHAAAAAAAAAAAAAAAAAAAAAAAAAH!!!!!!!!!!!!!!!!!

Whatta blast! Even if most of the HF rigs there were overpriced, I
got mine from somebody who, unlike most other people there, wanted to
make a quick sale, and was willing to give a good price to do so.
The number of people selling Motorolas was kind of overwhelming,
and (thankfully) there weren't a million zillion Computer vendors.
If I wanted that, I'd go to a computer show or one of the hamfests
around DC.

A TRADE SHOW RIVALING FOSE (in DC) ON THE INSIDE! Really EXPENSIVE
door prizes. Shoulda heard the guy who won a TS-50S from Kenwood.
You could hear him from OUTSIDE the arena.

I worked W8BI/8, the special events station, from the other end of the
parking lot on 20 meter QRP CW, and then went over and met the guy
I had spoken to, and then got to be a guest operator!

In our hotel, nearly everybody staying there was a ham. The group I
went with bought a lot of 10-24 AmpHour batteries, and we were testing
them in our van in the parking lot. No fewer than 10 people stopped
by to say "Hi." We met dozens of people with whom we had only spoken
to in the past, and generally had a great time.

We are already planning for next year...

Ahem.... there are a bunch of us old timers (Well, in our
30's anyway!) who enjoy plate modulated AM with vintage gear
on the ham bands. Check 29.0-29.2 when 10 is open, or 3880
and thereabouts in the evenings.

Well, I don't know if I'd go THAT far... ;^) There is still quite a bit of
AM operation on the ham bands, and lots of it is high level plate modulation.
I wouldn't say it's "limited to AM broadcasters."

As to the hefty modulation transformer, that's becoming obsolete with the
advent of PDM, the Harris "digital modulation" technique, and other modern
methods of AM. And there _are_ hams using these methods (at least PDM).
I have a Heathkit Apache (remember those?) from which I threw out the
modulation transformer about 5 years ago. It's still being plate modulated.
Unfortunately, the rest of the transmitter still weighs about 95 pounds
too much. :^)

Maybe someone else can answer this question... do they still make AM
broadcast transmitters with conventional modulators, or has everyone gone
to more efficient methods?

Regards,
Keith (WA2Q)

I heard a suggestion about improving audio from HT's while traveling in your car: Purchase a CD adapter for your tape deck and plug into the speaker output on your HT! RS sells this adapter (12-1951 "93 catalog) for $19.95.

I haven't tried it yet, but several of us thought it sounds like a neat idea. Those who have tried it say it works great. Just thought I'd pass it along.

Well, I guess it depends on which hand you're using. My understanding is
to use the thumb for the dits and the index finger (or whichever other
finger you prefer) for the dahs.

I am not sure what will happen to rec.radio.info after the r.r.a.misc
reorg. I think it would be best to just wait and see. I know one thing,
searching for bulletin posters will be harder ... ;-)

>>Or is the intent to remove bulletins from r.r.a.misc? I'll assume that's it.
>This is precisely what I was trying to do. Good assumption!

This will happen with the re-org (r.r.a.space, r.r.a.emerg-serv,
r.r.a.dx/operating) anyways. *some* may continue (even cross posted) to
r.r.a.misc (not my doing, just me reading into some peoples motives for
posting information).

wait a minute.... I thought the no-code technician license was getting
a 1x3 call, just like the w/ code technician and general class folks.
doesn't a 2x3 call mean that you started out as a novice? and if so,

Nope. It may mean that region 6 ran out of 1x3 calls for technicians. In 4-land this has happened and Novices, Tech's, and Generals all get 2x3 calls. Advanced and Extras here are getting 2x2, I think. So, me being a new Tech with a 2x3 could be getting another 2x3 when I upgrade to General this summer (I hope). Suggest you get a copy of "QST" -- there the ARRL prints a chart showing the callsigns handed out by the FCC for each region and class level at the beginning of the month. (actually, 2-months before the month of publication due to lead times). More recent data can be found in the ARRL's bulletins transmitted from HQ.

Well, net-wisdom indicates that you would have more noise in r.r.a.bulletin,
if left unmoderated, than the paultry number of non-amateur postings in
r.r.info could ever create. If made moderated, it would be painless,
in many respects. But I look at the `noise' in r.r.info and r.r.a.bulletin
looks silly ... Even sans a kill file/filtering, three keystrokes a week
extra doesn't sound like a problem ;-)

Sorry, DX and ARRL reports are directly posted. There would be *no*
difference in posting speed. Some of the AMSAT reports are currently reposted
because of the momentum of the previous system of posting. I was hoping for
a fix to occur at the mail-to-news gateways (but have not yet got any
responses from the admins yet) to allow cross-posting.

Keep in mind, Kermit, that one of the goals of rec.radio.info is to
try to get the articles posted at the source. news.answers operates under
the same paradigm ... there is *no* difference in posting speed between
what we are doing now and a unmoderated group when it comes to periodic
previously approved bulletin sources (if there is, I am working hard to
fix that, broken automated tools not-with-standing :-).

>Also, unless I am missing something, the DX, AMSAT, and ARRL Bulletins
>do not always appear on rec.radio.info within a day.

Blame this on propogation through the net, you are seeing them as fast as
the news can flow ... Moderation does not neceassarily mean all the
bulletins have to be hand approved by the moderator (sometimes it simply
requires quick hands on the cancel article keys :-)

Actually, plate modulation has been obsolete for at least 25 years.
What is done in modern broadcast transmitters is to build a matched
pair of transmitters, each of which puts out half the total power.
The audio is applied to them as *phase-modulation*. The two transmitters
are summed together at the outputs in a high-power combiner hybrid
which feeds the antenna. I don't remember what the phase relationship
of the combiner is, or the phase relationship of the audio modulation, but
I know it has been in use for decades at AM radio stations. The reason
why this can work is that a narrow band phase modulation signal is
identical to an AM signal, except that the carrier is 90 degrees out
of phase in the PM case.

>DL3ZBJ, AB6EL, VK6BGV

The convention was set by the forerunner to the electronic key which
was the semiautomatic bug, a key that generated dots by means of a
mechanicanism based on spring-loaded contacts that vibrated to
generate 10 or 12 dots before fading out.
For right handers, pushing the paddle
to the right with the thumb caused the generation of dots. Pushing
it to the left with the index finger caused the generation of a
continuous dash that lasted as long as the paddle was pressed.
The push-paddle-to-right association with dots was fixed by the
construction of the bug and could not be changed.

Applying this convention to modern keyers,
this would translate to dots on the left paddle, dashes on the
right. Electronic keyers let you reverse this if you wish.

(I hope I have this right. I remember how the bugs were configured -- it
is just that I always get left and right confused.)

SB SAREX@AMSAT $STS-55.005
STS-55 Launch & Elem. Set JSC-007

The Space Shuttle Columbia, with the German Sapeclab Payload on-board,
was launched from the Kennedy Space Center today at 14:50 UTC.

STS-55/SL-D2 will carry out materials and life sciences research for
Germany using the European designed spacelab hardware. Of particular
interest to radio amateurs is the inclusion of the SAREX (Shuttle Amateur
Radio Experiment) hardware on this mission. SAREX allows school groups and
amateur radio operators to talk to the Shuttle crew while they are on orbit.
STS-55 is expected to perform around-the-clock research over the planned
9 day mission.

A nominal 28.5 degree inclination orbit was achieved after the OMS-2 (Orbital
Maneuvering System) burn. Therefore, prelaunch element set JSC-007, generated
by Gil Carman, WA5NOM, is valid for flight day 1.

I believe the BBC 198kHz transmitter at Droitwich uses some form of phase modulation to achieve its output. If you add two PM signals together in the correct phase, it is possible to get something which looks like an AM signal as various sidebands cancel. This method allows the entire transmitter to run in class C and avoids having to modulate anything at a high potential. No idea if it is still done like this though.....

: Tony

What exactly do you mean by 'entry class licencees'? I live in the UK and am just about to take my RAE (next week in fact) and I am not aware of any restrictions as to who can use the 144-146MHz band. Plus, I would just like to point out that 'no-codes' as you call them, do not all pass by looking at a question pool. The only time I ever heard of a 'question pool' was on this news group and it is the 'no-code' which I will be taking. I intend to pass my exam by means of a bit of hard work which has been fitted into what spare time I have. I will take my full licence when I have the time and cash but I do not see what gives people who already have 'code' licences the right to treat us like second class users. Okay, so there are some people who choose to abuse their access to the radio amateur frequencies, but who has the right to generalise and tar us all with the same brush.

Sorry, this was not intended to develop into a candidate for alt.flame. I have worked very hard and waited for a long time to get my licence and I am looking forward to being able to take my morse test later. It just gets a bit annoying to be generalised about all the time before I even have a chance to prove myself.

Source record: 282706
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave

High-level modulation can be used in SSB systems, and work was first initiated in this area in the 50s by Leonard Kahn. His idea was termed envelope elimination and restoration. The low-level SSB signal generated would be split into two 'streams': in the 'phase' stream the signal would pass through a limiter which removes amplitude fluctuation but leaves the phase information intact; the 'amplitude' stream would envelope detect the signal, and use an amplified version of this envelope to high-level modulate the PA.
The envelope would thereby be re-introduced into the signal, producing the required SSB. Efficiency would be high as the PA could be operated in class-C, or other non-linear modes.
Drawbacks to the operation of this system include time-delays in the phase/amplitude streams, imperfect high-level modulation (PA output voltage not truly linear with applied 'DC'), and AM-to-PM conversion due to non-linear reactance effects of device.
Seems like this technique hasn't been used much at all for SSB, and this is a little surprising as it can work quite well.

More recently, the technique has been re-considered as a means of permitting high-efficiency amplification of linear digital modulation schemes, employing non-linear PAs. Again, there are the drawbacks above, but feedback can be applied to correct for the non-ideal amplitude/phase response. Neutralization of the PA can help when high modulation depths are present, to reduce the feedthrough effect due to output/input capacitance, which has implications for both phase and amplitude responses. Use is made of high-efficiency modulators, particularly PWM types, to permit overall efficiencies to be several times those attainable with standard linear PAs, hence extending battery life on your average personal communicator.

Anybody tried this technique for SSB or other linear modes?

>Rick N6RK

This technique is often termed 'LINC', from LInear amplification using
Non-linear Components.
Rick has given the basic idea, but perhaps the following may help to
explain what's happening:

AM signal, S(t)=E(t) cos(omega t) , omega t being radian carrier freq.

This vector can also be generated by

S(t) = Em/2[sin(omega t + phi) - sin(omega t -phi)

where Em is the maximum value of E(t), and phi is the angle necessary to
satisfy the equality. If you can think of 'cos(omega t)'
as the x-axis and 'sin(omega t)' as the y-axis (i.e. freeze the signal wrt
carrier frequency), then plotting the above terms can reveal all. That's
all there is too it (hmmm.....).

The AM signal is therefore separated into two signals of constant amplitude
which can be individually amplified in high-efficiency stages and then summed
at the output to produce an amplified version of the original. Easy, innit?

I agree. I'm beating the he!! out of my Alinco DJ580's connector.

Unfortunately, I do not (yet) live in the affluent low crime rate suburbs.
So theft is a concern of mine. Which is why I started with an HT.

Are there any quick connect/disconnect mobile rigs (2 meter or dual band)
available? I'm thinking of something where the entire unit (not just the
front panel) slides in or out of a chassis which automatically makes/breaks
the power AND antenna connections. I would like to be able to just grab
hold of the unit and pull. A neat feature would be a similar "back plane"
in my condo that I could then slide it into when I get home! Any one
make such a rig?

First of all, Michael P. Deignan seems to have plenty of time to make
inflammatory posts, so you may wish to simply ignore him.

On the other hand, I *did* use the question pool in preparing for my Extra
written exam. On a section by section basis, I answered each question, marked
any that I had answered incorrectly, and then studied the appropriate material
in order to answer the question correctly.

Did I memorize the pool? No. I did the most poorly in the rules/regs section
on space operation and I also had to bone up on the antenna patterns. After
all, who ever uses that stuff? I did have to memorize some material, since
Part 97 is not something you can figure out without a reference.

I saw reference in another message to a QRP mailing list. I would like details on this, including an address to which I could send a subscription request.

Thanks in advance.

Having just passed my Advanced after over 10 years away from ham radio,
I'm looking at my equipment and thinking...

First, I have a Yaesu FT208R 2m HT that doesn't want to transmit. (Maybe
it knows that I haven't gotten my ticket back yet :-). Whenever I try to
transmit, no matter what position the "shift" knob is set to, the
radio beeps and the display shows an "E". This typically indicates that
the selected frequency and shift would result in an out-of-band transmission,
but the radio does that even when the shift is set to Simplex. I figure it's
a computer problem -- after all, the little lithium cell that keeps it alive
is now almost fifteen years old -- but I can't find a reset, and the manual
doesn't describe one. Any suggestions?

Second, I'm looking for another HT, preferably one that will cover
70cm as well as 2m. I know there are a bunch of these, but I'm also looking
for something will receive AM on the aircraft band (I'm willing to do some
mods), and -- pushing it, I know -- transmit AM on the aircraft band as
well. If anyone knows of a radio that might come close, I'd like to
hear about it. (I'm looking for all of this in _one_ box, of course!)

Thanks,
-- Bruce Toback

>NO! I will not!
>not because I hate you, rather, there are none...

Not true. There are mods, but not any to increase the
frequency coverage. The mods printed in mods books are
bogus.

martinbw@jackatak.raider.net (Bruce Martin) writes:

>I returned last night from Dayton. It was an interesting trip. I was
>somewhat dissappointed by the ammount of not particularly HAM
>related junk at the flea market. I was dissapointed by the
>relativly few HF rigs for sale and way overpriced.

I have noticed the same thing at the big Foothill flea market
that they have every month in the SF Bay Area. There seems
to be more old computer junk, old test equipment, and completely
non-electronics-related items (e.g. Village People 8-tracks)
every year.

Do keep in mind that flea markets have a price-negotiation
environment. The posted price is usually going to be
too high, but the seller expects to haggle.

Also, with the fantastic new rigs on the market like the
new tiny Kenwood mobile (TS-50 I think), Icom 737, and
Yaesu 890 and 990, there are a number of 2-5 year-old-rigs
that are for sale, with a $500-$700 price range. Hams are
selling them, so they can get one of the new rigs. They are
completely solid state with digital readout and modern features.
A popular favorite is the Icom-735. Check rec.radio.swap.

Well, my wife and I took our tests for nocode technician Saturday,
24 April, and we passed!

Lurking around in this group helped me get my bearings in the
ham world, so thanks to all of you out there.

And thanks *very* much to Rich Bono, NM1D for his Autoexam program.
We ran it on an HP 95LX and it helped us out a bunch.

We also used the Gordon West book and the ARRL Now You're Talking
book.

It took us about 5 weeks to study and schedule our exam.

We plan to use a dualband HT to keep in touch with the outside
world while mountain biking. We also are thinking about becoming
involved in MARS.

So we'll be talking to you all on the airwaves in about 6-8 weeks!

: where Em is the maximum value of E(t), and phi is the angle necessary to
: satisfy the equality.

One disadvantage of this technique is that you lose quite a bit of power
in the hybrid combiner. At modulation peaks, the two signals are in
phase, and power output is the sum of the powers of the two power amplifiers.
With no modulation, the two partially out-of-phase signals combine to create
a carrier of half the amplitude (1/4 the power), a 6 dB loss.

>Regards,
>Keith (WA2Q)

The latest-style solid-state MF AM broadcast transmitters use a system
that has a number of gated RF amplifiers driven by an audio A/D converter.
With no modulation (carrier only), 1/4 of the amplifiers are turned on.
When the modulating audio goes positive, more amplifiers are gated on
until the 4 x carrier power point is reached on the audio peak. For
a negative peak, the amplifiers supplying the carrier power are
successively turned off until zero carrier is reached. All of the
amplifier outputs are combined in a hybrid network that prevents the
gated-on amplifiers from feeding the gated-off units. All the RF
amplifiers run Class-C for efficiency.

I saw a 5-kW transmitter from Harris (the old Gates Radio) at NAB
last year that used this method.

1458. How to help an 8 yr old get a license

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-26 20:57:43 UTC
From: peterson@physc1.byu.edu
Message-ID: <1993Apr26.145743.589@physc1.byu.edu>
Source record: 282637

My son (almost 8 yrs old) has taken an interest in my relatively new amateur radio interest (I finally got around to taking the exams last January and got the license in March). Anyway, my question is whether there are any good ways for someone that age to study for the exams. He would really like to get either a Tech or Tech+HF but I'm not sure how to best help him learn what he needs to pass those exams. I have seen both video and audio tapes that appeared to have potential but would like to hear some other experiences before I spring for the $20-40 and find out that he can't understand a thing they are saying.

I would appreciate any help you may have to offer on this.

A few years ago, one of our local 50 KW AM stations replaced their old
RCA transmitter with a modern unit from Harris. It uses pulse width
modulation, and gets 90% efficiency - 55KW in, 50 KW out! I wrote to Harris
about the technique, and the engineer who designed it sent a block diagram
and description. The modulator is a big switching tube in series with the
final. There are four tubes, including two drivers, a final, and the switch
tube. Quite a change from the HUGE modulation choke in the old rig! If
anyone cares how they do it, I will dig out the description and post.

: AL N1AL

That would be true if they used a sum-and-difference hybrid as you
seem to have assumed, but I don't believe the combiner is built that way.
What actually happens is that the load impedance seen by the two transmitters
varies with modulation so the amount of current drawn (hence power) is less
with no modulation, so from the standpoint of power consumption, it is not
as bad as you say. I probably shouldn't have used the word "hybrid" in
describing the combiner.

BTW, with plate modulation, you need an audio amplifier with
output power of 1/2 the RF carrier power (25kW audio for a 50kW AM
broadcaster). This amplifier will run about 33% efficiency for program
material (the 78.5% class B efficiency in handbooks is only for sine waves)
and hence dissipate 8kW or so except during silent periods.

Well...Looks like you're in luck...The above radio you are describing
is the Yaesu FT-530. It is a very nice Dual Band radio that will also
receive AM on the aircraft band. I am not too sure about the transmit
part...you'll have to ask around about that...

Only reason I know about this is the fact that I have one and I like
it a whole lot...it is a really cool setup.

Later,

Pete

1465. Monthly Review of Solar and Geophysical Activity for March

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-26 22:25:18 UTC
From: oler@rho.uleth.CA
Message-ID: <9304262225.AA27042@rho.uleth.ca>
Source record: 282549

```
-- MONTHLY REVIEW OF SOLAR AND GEOPHYSICAL ACTIVITY --
Summary for March 1993

Report compiled by the
Solar Terrestrial Dispatch
P.O. Box 357
Stirling, Alberta
T0K 2E0, Canada

Data Provided In-Part Courtesy of the
Space Environment Services Center, NOAA
and the
NRC / Dominion Radio Astrophysical Observatory
Penticton, British Columbia, Canada

MONTHLY ACTIVITY SUMMARY FOR MARCH 1993

We are now in month 79 of solar cycle 22 (as of March 1993). There
were 364 flares (optical and x-ray) in March. This is a 15 % drop over the
number of flares observed in February. Of these 364 flares, 4 were ranked as
major events and 9 were categorized as minor M-class events.

A breakdown of the energetic events for the last four months follows
below.

_____________________________________________________________
| | MAR '93 | FEB '93 | JAN '93 | DEC '92 |
| | --------|---------|---------|---------|
| Major | 4 | 2 | 0 | 0 |
| Minor M-class | 9 | 16 | 2 | 4 |
| Class C or smaller | 351 | 410 | 163 | 280 |
|--------------------|---------|---------|---------|---------|
| Total | 364 | 428 | 165 | 284 |
-------------------------------------------------------------

The monthly sunspot number for March was 107.4 as computed by the
SESC. The preliminary RI international sunspot number for March was 70.5
which results in a smoothed sunspot number of 79.6 for September 1992.

The monthly 10.7 cm solar radio flux for March was 136.4 which
results in a preliminary smoothed mean flux value of 133.7 for September
1992. There were numerous bursts reported this month at 2800 MHz. Consult
the burst report compiled below for details.

The largest x-ray flare of March was a class M7.7/3B tenflare from
Region 7440 from S07E27 at 20:49 UT. The flare was associated with a
moderate Type II sweep and a Type IV sweep that lasted nearly 14 hours.
A tenflare measuring 370 sfu also occurred, lasting 28 minutes. Region 7440
```

had shown two delta configurations prior to the eruption of this flare in the eastern trailer spots, along with a large field of bright plage and associated shear. At 720 millionths in an EKC optical configuration, this spot complex was easily the most impressive on the disk. Protons at greater than 10 MeV rose to near event-levels following this flare. A single 5-minute averaged maximum flux value of 11 pfu was observed at 07:10 UT on 07 March. If protons would have remained elevated at these levels for ten additional minutes, protons would have met event criteria. Slow decay in protons was observed over the following two to three days.

The major M7.7/3B tenflare from Region 7440 was preceded four days earlier by an M5.1/SF flare on the southeast limb from the same region at S07E81 on 02 March at 21:49 UT. Flare loops were observed during this event. Region 7440 erupted one final time at 18:15 UT on 12 March with an impressively large M7.0/3B long-duration tenflare located at W51. The event started at 16:07 UT, peaked at 18:15 UT, and reached a half-power point end time at 18:47 UT. The event was associated with moderate to strong radio bursts across the spectrum, a 1,200 sfu tenflare at 17:36 UTC, and moderate Type II and IV sweeps. Protons at greater than 100 MeV began arriving at 18:50 UT and reached a maximum of about 2 pfu at 19:55 UT. Protons at greater than 10 MeV surpassed the event threshold of 10 pfu at 20:10 UT and peaked at 44 pfu at 01:55 UT on 13 March. A polar cap disturbance was associated with this activity. PCA reached a maximum of about 0.6 dB at 22:00 UT on 12 March, which was below PCA event criteria.

Prior to this last M7.0/3B tenflare, Region 7440 showed considerable magnetic complexity in a delta configuration with strongly sheared fields along the southern and western boundaries of the group. Shear diminished considerably on the northern end of the large spot 24 hours prior to the eruption of this flare.

Region 7448 contributed a single major class M7.3/2B flare at 22:02 UT on 11 March from N15E74. This event was associated with a strong Type II sweep, lacked a Type IV, and produced only weak radio bursts across the spectrum.

The list of minor M-class or greater flares and associated radio emissions observed during March follows:

SUMMARY OF MAJOR ENERGETIC EVENTS

The geomagnetic field in March was more active than February. The estimated planetary A-index for March was 21, compared with 16 in February. There were three sudden magnetic impulses observed during the month. The first occurred at 21:39 UT on 08 March and measured 50 nanoteslas (nT). The others occurred at 05:26 UT on 15 March and 01:56 UT on 23 March and measured 20 nT and 27 nT respectively.

The most disturbed day of the month was 09 March following the arrival of the sudden storm commencement noted above at 21:39 UT on 08 March. This disturbance was the result of the major M7.7/3B tenflare of 06 March and resulted in major to severe geomagnetic storming. Heaviest hit were the high latitude regions, although middle latitude stations saw respectably large magnetic perturbations. The GOES-7 spacecraft experienced two magnetopause crossings following the SSC. The first and most significant occurred between 21:53 and 22:03 UT. The second crossing was very brief and occurred at 23:46 UT for approximately one minute.

The daily estimated planetary A-index for 09 March was 78. Severe geomagnetic storming occurred between 00:00 UT and 09:00 UT on 09 March before giving way to active geomagnetic conditions which persisted through to the end of 09 March.

Despite the full phase of the moon, strong auroral activity was sighted as far south as Hancock, Michigan during this disturbance.

The lowest smoothed sunspot number for Cycle 21, RI = 12.3, occurred in September 1986. The sunspot maximum for this cycle (cycle 22) occurred in July 1989, with a peak smoothed sunspot number (RI) of 158.1.

Note: Prior to June 1991, the 10.7 cm solar radio flux measurements originated from the Algonquin Radio Observatory near Ottawa. From June 1991 onward, the flux has been (and will continue to be) measured from the Dominion Radio Astrophysical Observatory at Penticton, British Columbia, Canada.

This is something that amazed me. I was browsing thru a QST from 1982 or 83 looking for some modification articles. I started looking at the letters column and couldn't believe there were arguments going then about needing/not needing a codeless class of license.

And then I started perusing the ads. Everyone complains about the price of gear, but it hasn't changed that much in the last 10 years. Of course my 10 year old TS430 only has 8 memories as opposed to 100, but I don't even use all of my 8!

Yep - not much has changed in the past 10 years in amateur radio. I hope in another decade we won't be able to say the same thing.

>I saw a 5-kW transmitter from Harris (the old Gates Radio) at NAB
>last year that used this method.

Yup, I think that's what Harris calls "digital modulation" or something to that effect. They have a patent on that method, as far as I know.

There are two things about that method that are particularly interesting:

1. They get good sounding audio while only having 48 RF amplifier modules to switch off and on (at least in the version I saw.) If they didn't play any "tricks", that would be awful... it wouldn't even be 6 bit resolution. 6 bits would be 64 modules. They get around this by not having all the modules be equally weighted. Most of them are, but then there is one at half power, one at one quarter power, etc. That way they get much finer resolution than they would otherwise with 48 equally weighted modules.

2. The sampling rate in the system is very high... I forget exactly how fast it was, but 500K samples/second sticks in my mind. That may sound ridiculously fast for broadcast quality audio, but that way they don't need any special filtering. The Q in the output tuning network is high enough to take care of it. That gets around the filter problem that exists with PDM.

Pretty clever stuff.

: I doubt you can afford to buy one, though I have an idea
: how to build one. First off, you need very high Q crystals,
: probably around 300,000 or better to really make this work.
: While I've heard it is possible to get crystals made with
: Qs in excess of a million, I've also heard they don't like

At 75 MHz., the maximum theoretical Q achievable for an AT
cut quartz crystal (due strictly to quartz losses) is only
200,000. A quick check of my Telequartz catalog shows that
they have a typical Q of 130,000 for 5th overtone 75 MHz.
crystals. If we assume an unloaded Q of 130,000, the insertion
loss for a 2.4 kHz. bandpass filter will be on the order of 3 dB.
per pole. That is, a 4-pole filter will have 12 dB. of loss.
An 8-pole filter, which is probably more like what you had in
mind would have 24 dB. of loss. You would probably want to
implement the filter as a series of 2-pole filters in cascade
with amplifiers in between. Note that the 2-pole filters would
have to have different frequency responses among them to get an
overall rectangular shape.

I got some more info on this. They do the A/D sampling at the RF
carrier frequency. That way they can switch the RF amps on or off
on the zero-crossing points of the carrier wave.

>
>Rick N6RK
>rkarlqu@scd.hp.com

This system was used in RCA MF and HF transmitters in the 60's and
70's. They called it "Ampliphase". For some strange reason, I remember
the phase relationship as being 22.5 degrees between each side of
the transmitter at no modulation.

I never had to work on one of these mutha's. I hear that if you had
a directional antenna with a common-point impedance that went whizzing
through zero reactance at carrier frequency but did squirrely
things in the sidebands that you were fried with an ampliphase rig.

1479. rec.radio.amateur reorg - final proposal after 30-day discussion

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-27 07:10:51 UTC
From: ikluft@uts.amdahl.com
Message-ID: <bbVY03MJd0P.00@amdahl.uts.amdahl.com>
Source record: 282645
Cross-posted to: news.groups,rec.radio.amateur.misc,rec.radio.amateur.packet,rec.radio.amateur.policy

```
Results of the discussion on the rec.radio.amateur reorganization
-----------------------------------------------------------------
30-day discussion period ended: April 26, 1993

Based on a Request for Discussion (RFD), a discussion of a possible reorgani-
zation of rec.radio.amateur was held for 30 days on the news.groups newsgroup.
The location of the discussion was required by the "Guidelines for UseNet
Newsgroup Creation" and was announced many times in the rec.radio.amateur.*
newsgroups.

The result of the 30-day discussion appears favorable so we will proceed with
the next step in the guidelines. A Call for Votes (CFV) will be issued as
soon as arrangements for voting can be made. (See "Notes on how to proceed
with the CFV" below.)

Unchanged Newsgroups
--------------------
It was agreed that these newsgroups will not change. They will not be on
the CFV.

rec.radio.amateur.misc all Ham radio topics not covered below
rec.radio.amateur.policy regulations & policy issues

Newsgroups That Will Be on the CFV
----------------------------------
All of these groups are UNMODERATED.

rec.radio.amateur.digital.misc packet radio & other digital modes
[includes old rec.radio.amateur.packet]
rec.radio.amateur.digital.tcp-ip TCP/IP via packet radio
rec.radio.amateur.dx DX (long distance) communications
rec.radio.amateur.antenna discussion of amateur radio antennas
rec.radio.amateur.equipment amateur radio equipment: manufactured
products, modifications
rec.radio.amateur.instruction Ham radio instruction & examination
rec.radio.amateur.operating discussion of operating procedures
rec.radio.amateur.homebrew radio construction & experimentation
rec.radio.amateur.space amateur radio in space: satellites,
earth-moon-earth (EME), shuttle, MIR
rec.radio.amateur.emerg-services emergency services: RACES, ARES, NTS
rec.radio.amateur.rdf radio direction finding: recreational
hunts and searches for interference

Notes on how to proceed with the CFV
------------------------------------
```

The guidelines say that there should be minimal delay between the close of the discussion period and the posting of a CFV. In order to comply with that, we'll take this back to the rra-reorg mail list. If you would like to join the discussion to help review the final wording of the CFV, send mail to
Internet mail: rra-reorg-request@amdahl.com
UUCP mail: amdahl!rra-reorg-request
and you will be added to the list.

All decisions made in the discussion period will be held UNMODIFIABLE in the writing of the CFV. The scope of the discussion will encompass wording of a proper CFV based on this discussion and arrangements for a vote-collecting site. This may include filling out the wording of the newsgroup charters but not changing their intent.

Note: the 4/24 "evolving proposal" said that we might use MIT's offer to host newsgroup votes. As it turns out, that may not be possible because the student/employee who handles that is in the crunch period prior to graduation. The members of the rra-reorg mail list will need to determine an acceptable site for the voting.

>

As usual with people who have a particular approach to life which they think God has personally passed on to them, you have jumped to a general conclusion from a few observations.

1) theory is easy for some people and not for others. The reasons are varied and no clear cut answers exist. I once read that theory particularly the math and physics end are a natural for "left brained people" those whose tendancy is to Logic based reasoning.

2) code is easy for some people and not for others. The reasons are varied and no clear cut answers exist for the difference. In the same article it pointed out that "right brained" people have an easier time with things like code. These people are the ones whose reasoning is dominated by the emotion side and tend to creativity.

For 6 months, I have been studying the morse code. I work at least 1 hour per day in 30 min sessions. I have the ARRL tapes, some other company tapes, morse by rythmn and self hypnosis tapes. I also attend a class that is also allowing me to practice a little. In addition, I have Morse academy and supermorse and one other morse program which name I forgot. The best I am consistently taking is 3wpm. Randomly I can on occasion get 5wpm.

I took 2 weeks to study the novice and technician written test. I practiced with a computer test program and studied an additional week to ensure that I understood every answer. Checking the handbook and my electronics texts for anything I missed or was not sure of. I passed the tests easily without any misses. I already can pass both the general and advanced written tests. Haven't done it because I still can't pass the 5wpm code.

I am continuing to plug at the code. I think within the next month or so I may consistently get 5wpm. Then I'll take the 1A test and the general written test. Then I will work the rest of the year to try to get 13wpm.

So, don't tell me how easy it is to learn the code and that some people you know did it after studying a couple of minutes. Great for those people! I'm happy for them. However, there are other avenues into the Ham hobby and the Amateur SS ought not be determining who and how REAL people should be allowed in the hobby.

I'm now a ham (as soon as the FCC does its part) and proud of it. I intend to upgrade as soon as I can get past the code obstacle. It isn't easy but it is worth it. Although I question incentive licensing when it makes some people think that they are superior to others.

Hi. I live in an apartment building and would like to build a half decent beam. It would be a trade off between directivity and space, I realise, but if anyone has a plan for a beam and would be interested in sharing it I wouls appreciate it.

I am considering either a yagi or a quad, but I don't know the sizes. I have been told the ARRL antenna book is very good, so I'll probably pick it up.

This is for 2m by the way...

Several years ago I worked with a Class C Plate Modulated transmitter called a Collins 820 E/F. It has been dubbed among, if not, the best broadcast transmitter ever made. It could even be modified to run 125% on positive peaks providing a reactor and the modulation transformer are replaced. However, I recall it took around 18,000 watts input to get 5400-watts output. So it was not efficient but the station lost fringe area when it went to a modern 90% efficiency transmitter. In other words there is no free lunch.

From: zateslo@geomag.gly.fsu.edu
Message-ID: <C65931.KLD@mailer.cc.fsu.edu>
Source record: 282652

The rubber antenna on my IC-32AT sacrificed itself yesterday to save the radio. I need to replace it, and I am wondering whether to buy another Icom antenna (FA-1443B) or buy somebody else's. I have been happy with the Icom antenna, but if there's something much better, either electrically or physically, I'd like to know. Thanks.

True enough, but can't you get off-the-shelf SAW filters in that range?
I don't know if they come that narrow, offhand, but you might manage to
use a wider one and then filter the demodulated audio also.

Kevin-

Look for a mobile MOUNT that offers the quick-disconnect capability. Some
radios may have such a mounting bracket available as an option, but you may
also find what you want as in generic.

These mounting brackets are available from commercial two-way outlets, as
well as from some Ham outlets. Also, if your radio is fairly small and
light, there may be something available from cellular phone stores.

: a typical receiver, they are designed to be wider than the widest mode.
: 20kHz bandwidth is about the narrowest I've seen.

Not to detract from the replies indicating the difficulty of getting precise narrow linewidth/highQ directly at these higher frequencies, I have a 10 KHz wide Quartztek filter centered at 70.0 MHz sitting here on the bench. It seems like many of the current HF transceivers use a first IF in this region and I thought that 10-20 KHz width was common. I think that this first filter is the determining width for the nbfm mode on my IC735. I suspect it is no more than 20-30 KHz wide. Maybe someone has a manual handy for a similar radio and can say.

I don't know what this Quartztek originally sold for but it has reasonable shape factor and stop band. Once you get past some stuff about 50 dB down a few hundred kilohertz low of center it manages to get down to -100 dB territory. It's in about a 3/4" X 1 1/2" X 3" metal can with BNCs on it. It's excess to my needs so if the original poster really still wants a quartz filter at 70 MHz let me know. I don't know how many poles it is but it has 5-6 dB insertion loss (some ripple in the passband).

>That's who to contact... Mark? Should we leave that to you?

Yup ...

Dr. Kelso currently sends the postings to me for posting (which get gleaned automatically and posted immediately from my site), he has indicated that things will improve shortly :-)

John's SpaceNews reports may also be solved shortly as well, he is `experimenting' ...

Solar reports are still posted at my site from Cary's mailing list (and also passed to packet radio too), but I am reluctant to have them cross-posted at the moment since I can not compete against the fine propogation time that the ucsd.edu mail to news gateway has (at the moment, the Internet host that is responsible for my postings is short of disk space and has been moved to low priority solutions ...). Also, my attempt to have his messages cross-posted to sci.space.news (also a moderated group) as well met with, ahem, problems.

If anyone has a well connected central site that is willing to hack at the mail to news software to allow cross-posting? ;-}

The next thing to do is to standardize the Message-IDs so that messages going to packet match, somewhat, to the Packet BIDs:
Message-ID: <$amsat.o51@ampr.org>
allowing for messages to cross back and forth between the two domains ...

A reminder to all that the American Radio Relay League
continues to make available to Amateur Radio Operators and
non-amateurs alike a wide variety of free materials and
services. Of particular interest to the not-yet-licensed
individual would be the ARRL Prospective Ham Package. In
the PHP, one would find:
-
1. Printouts of Volunteer Examination session
opportunities in his/her area.
-
2. Listings of Amateur Radio clubs in his location.
-
3. Helpful promotional material about the Amateur Radio
Service.
-
The already-licensed individual might well be interested
in another free ARRL publication, the ARRL Public Service
Communications Manual. The PSCM represents the "bible" of
public service communications, and clearly/concisely
points out how the ARRL National Traffic System and the
ARRL Amateur Radio Emergency Service function as a
cohesive unit to provide the maximum support to the public
both in times of disaster as well as "normal" times.
-

To obtain either of these free ARRL services, please
provide me with:
-
A. Your name
B. Your mailing address
C. A Specific request for either of the two services
above.
-

The Douglas County Amateur Radio Club has, for the past few years, set up a packet radio station in a local mall and invited passers-by to stop and let us send Mother's Day greetings for them via packet radio. We have a club banner prominently displayed with meeting times and locations, and often have brochures and other information about ham radio and our club for people to take with them.

We usually do this a week or two before Mother's Day, so the messages have time to be delivered. We explain that the recipient doesn't have to be a ham, that the message will ultimately be delivered by a ham either in person or over the phone. Since this is a college town, we get quite a few college students who enjoy a chance to send Mom their love in a novel way. (And, of course, it's free of charge.)

This year we're moving from the mall to a location on the KU campus, since the date coincides with a day of campus festivities. I believe the KU ARC will be joining us for the event.

It is lots of fun, it provides a unique service to the community, and ham radio gets a little more exposure.

>N9MWB

And to add my two bits...

What bothers me in particular is that the original poster felt it necessary to "apologize" for their choice of license. C'mon folks, what have we been doing here? When I first got into ham radio I was told of a "close-knit community, supportive and friendly people." Trying to make other hams feel inferior really doesn't seem to fit that description.

While I realize that the "no-code" bashers are an unfortunately vocal minority, if they have succeeded in putting legitimate hams on the defensive, then perhaps the rest of us haven't been doing our job.

CW HF is all I work (SSB/voice bores me), but if I happened to like only VHF/UHF, who cares if I never want to learn code?

Those who do care, shouldn't. Or should at least refrain from attacking other hams simply based on the comprehension of dits and dahs. We've got bigger problems (14.313 MHz comes to mind). Last month I had the unfortunate displeasure of hearing a ham radio shop employee tell a "fresh" tech that "13 wpm is what separates the men from the boys..." Give me a break! No wonder amateur radio almost shrivelled up and died! If I hadn't been late for an appointment, I would've loved spending the next hour hearing more about this fascinating theory.

Bottom line - my apologies to any Techs who've been put on the defensive. The people making the attacks are the same bozos who drive in the fast lane with their left turn signal on.

Hi,

My son was 8 and came up to the club ham shack during a DX SSB
contest. There were times when I couldn't get thru big
pileups and he took the mike and got through first time.. the
thinkg is that 8 yr old boys sound like YLs.. had people saying
to everyone.. just hold on and let the YL call and say part of the
club call sign... well this got him pretty excited bout ham radio.

I made him a bet (a nintendo game) that he couldn't get his
license before a given date. I got him the free Macintosh
hypercard stacks for the novice test and the software for
tests on the PC. I got a copy of Super MOrse for the PC.

We designated a certain period of time each day that he would
spend studying the code and a certain period where he just went ofover
the exam questions. It was a great lesson in keepin on task and
learning how to study.

He got bored with the code part.. only used the computer till
he learned his letters. .. I then would sit with him and send
for about 10-15 min a nite and when we were driving somewhere in
the car.. we would play games.. like spelling workds in morse.. or
trying to send what was on a sign before we passed it in the car.
When he learned enough, we did practice QSOs. As soon as
he passed the Novice we sat together and he made one QSO per
nite, I had all the things he needed to say on a typed out
sheet with blands for things like the person's name

and call sign and such...it made him a lot more comfortable in the beginning to have it written out in front of him (i have done the same things with older students and adults and it really helps).

Made him another bet about the Tech and lost.. then bet him a big one about not getting his General before he was 9. .. Well it cost me a big trampoline and a set of rooer blades (about $300--- but best bet I ever lost) He also passed his 20 wpm CW.

Some may object to just learning the answers to the questions and not the theory.. but most people do that anyway... he has since learned all the correct procedures, and much about theory.. he has built a 2 meter receiver by himself..and it worked the first time.. and is building a SW rec and will build a QRP Transceiver next.

We were away in a cabin for afew days with friends. The cabin was on a lake...the bottom floor had a porch out to a lake for fishing and the top floor had a porch facing the woods..everyone else got the fisherman's part and I got to set up my QRP station and PVC antenna on the top portch. I was having a QSO on the top floor and my son and everhyone else were on the other porch fishing. My son turned to the one of the guys (also a ham.. but he doesn't do CW) and said "he is speaking to JIm in Michigan" not bad considering I was a minimum of 13wpm and he was copying in his head...

Keep it fun and use bribes if possible.

> SASE both times. Nada. Anyone had better luck than me?

I send a check to purchase the R2 board in December. After over 3 months of no product or reply, I sent a follow up letter. 30 days later, no reply. I ordered a R1 type board last year. Took 4 months to get it. I wrote to the ARRL several times to see what they could do. ARRL did not even reply to my note. I noticed that they published more material and offers to sell stuff by Rick Cambell in current issue though.

I'm really concerned about the poor track record shown by this Applied Radio Science, Rick Campbell KK7B, so far. Your only out your SASE's!

The Quantum battery is a sealed lead acid design, not a gel. I like the quantum, and just picked up the adapter for the FT-530 at Dayton. Anyone need an adapter for a W2A, 24AT or other Icom using this battery design?

|>
|> I would appreciate any information on the company and specifically on their Powerpac+
|> gel cell from anyone who has first-hand knowledge.
|>

As for W & W, I bought a battery from them at Dayton. When we got back to the hotel, I popped it in the quick charger. The battery worked just fine, but the casing was of poor quality and would not mate well with the radio (it would not slide on far enough to lock, though the contacts were touching and I verified the battery's operation).

I took the battery back to them the next day, and they refunded the money. The W&W fellow DID manage to get the battery to lock onto the HT, using quite a bit more force than I was willing to apply. It was my opinion that the same amount of force (nearly none) required to attach a Yaesu pack should suffice.

I don't know about the 820 E/F, but my nomination for *best*
AM rig is the Collins 21E. Sounded great on the air and
just ran and ran.

On a slightly related track, ie: High-Efficiency AM Transmitters,
does anyone else remember the Doherty Amplifier? This was a
scheme by Western Electric, back when they made broadcasting
equipment, to get Class-C efficiency out of a linear final
amplifier. They actually amplified the positive modulation
peaks separately from the carrier and negative peaks and then
combined them in an output network.

Don't worry too much, because we are so much smaller over here we tend
to feel insecure and so we rely on our 'wonderful' history to try and
make ourselves look superior. Typical inferiority complex. I have met
quite a few Americans and I liked most of them - but then I don't like a
lot of the people I meet in the UK so who knows?

The point of this is, just because some people have a generic dislike of
others, do not assume that all of us are the same.

1505. Address help

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-27 18:13:54 UTC
From: MOSIER@steffi.uncg.EDU
Message-ID: <01GXI9HRSKPEAZT8VB@IRIS.UNCG.EDU>
Source record: 282618

Does anyone have a recent callbook or database with N1NLK listed? I need his address but he's not in MARVIN. ~~~~~

Thanks.

1506. MARS logo in 'Postscript'

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-27 18:16:00 UTC
From: slc1!vk2bea!michael@uunet.UU.NET
Message-ID: <1095@vk2bea.UUCP>
Source record: 282592
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,comp.lang.postscript,alt.sources

After searching fruitlessly for a MARS (Millitary Affiliate Radio System)
logo in Postscript, I broke down and did it myself. So here, for everyone
else's ammusement is the result of my efforts.

It can be used in colour, grey or monochrome (see end of file).

It is in Encapsulated postscript, and has been sucessfully tested
with 'Word Perfect' (as an EPS figure).

It has been tested with a NEC silentwritter (true Adobe Postscript) and
Ghostscript (FSF Postscript clone).

Comments, flames, etc to Michael Katzmann

I just came across a CB "slide mount" in the '93 Radio Shack catalog (page
26). Catalog number 21-566 sells for $17.95. It doesn't say whether or
not the Coax is carried through, but I suspect it is. Just buy two: one
for the house and one for the car!

Date: 1993-04-27 19:28:47 UTC
From: 4311@cpf.navy.mil
Message-ID: <9304271928.AA27900@ucsd.edu>
Source record: 282622

Friends,

I'm a new no-code trying to decide what appliances to buy to get into packet and UHF/VHF. I picked up a PK-88 last week in Seattle and will be shopping for a VHF and/or UHF transceiver next week in San Diego. (I even plan to visit HRO.) I feel that it's better to obtain a mobile setup that I can move into the house for packet and fixed voice operations. Question is.... should I go the extra expense of obtaining both 2m and 70 cm capability?

BTW, my current QTH is Pearl Harbor but Uncle is about to send me to Norfolk, VA. Any Norfolk specific comments on packet and/or voice activity would also be appreciated.

E-mail directly to me at 4311@cpf.navy.mil

1513. Meteor sats

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-27 19:29:35 UTC
From: jmk@cbnews.cb.att.com
Message-ID: <C65q5E.IxD@cbnews.cb.att.com>
Source record: 282670

After several trips to Dayton over the past few years I've finally amassed the makings of a polar-orbiting satellite APT reception station. I can pick up the NOAA satellites on 137.5 MHz regularly, but have never had any luck finding the Russian Meteor series, which I understand have better resolution.

Does anyone have any tips on how to find these, such as which ones have been active recently on what frequencies? I assume my tracking software is as good at predicting them as it is with NOAA-x, but they seem to pass over silently at all times of the day and night.

Sorry if this is a FAQ.

: >that has a number of gated RF amplifiers driven by an audio A/D converter.

: There are two things about that method that are particularly interesting:

: 1. They get good sounding audio while only having 48 RF amplifier modules to
: switch off and on (at least in the version I saw.) If they didn't play
: any "tricks", that would be awful... it wouldn't even be 6 bit resolution.
: 6 bits would be 64 modules. They get around this by not having all the
: modules be equally weighted. Most of them are, but then there is one at
: half power, one at one quarter power, etc. That way they get much finer
: resolution than they would otherwise with 48 equally weighted modules.

One interesting advantage of this method is that defective modules can
be replaced without taking the transmitter off the air! A missing module
does cause some audio distortion, but not enough that most listeners
would notice.

>
>Hope that helps...

Actually, there is grid modulation, screen grid modulation, supressor grid modulation and even cathode modulation. The different grid modulation types produce the required modulation with **MUCH** less power and expense than plate modulation. When I was a young ham (in the AM age) it was explained that plate modulation put out "much more sideband power". Neat explanation, put unfortunately not entirely true unless the plate modulation was greater than 100 %. 90% modulation from any of the methods gives you the same sideband power on a spectrum analyzer--I know because I measured it to settle an argument. Linearity may be an issue here for a music station, I have never measured the differences as it did not seem to be any different listening to voice. I do suspect that grid modulation would be more non linear than screen or plate modulation.

Hmmm... then perhaps the W5YI newsletter is slightly off. But here in
the United States, all the questions and answers for all license classes
are published and readily available. Like I said, I don't have a big
problem with Codeless Techs, but I do have a big problem with no-code
bozos screaming for priveledges that they don't earn.

>You keep missing the point... are you totally clueless or what?

No, but I guess you are. The *point* isn't whether code is a good operating mode. The *point* is why does the U.S. have this graduated access to the HF bands based primarily on demonstration of increasing level of ability to copy only one of the many permitted modes of operation? Those clueless like yourself spend all your time bashing others and defending the mode instead of listening. You probably turn on your radio and start transmitting before you ever turn up the receive volume to and audible level.

>FOAD de KD1NR

Yup, demonstrated knowledge of morse code certainly improves ones communication skills and operating practices. Thanks for proving my point.

And to the no-code technicians out there, don't let these blow hards turn you off. Not all morse impaired individuals have KD1NR's attitude. You can actually meet some nice hams in the CW portions of the bands. :-)

I just attended the Advanced Weather Spotter training last month. It was cosponsored by a local college and the US Weather Service. Everyone who was trained at this session will receive a Weather Spotter Certification number, that is used in making reports to validate the source as a reliable one (or at least someone who attended the all-day training session).

You might try calling the local office of the Weather Service to see when this training will be offered in your area.

> Doesn't always work, but it has in a number of cases. It's worth a try before
> resorting to more drastic measures.

I hope I got the attribution correct... I'm responding to
a followup:

Anyway, I'd like to suggest that this isn't the best way to approach the
problem. Don't forget that a fair percentage of the individuals who take
up jamming as a pastime aren't all together upstairs in the first place.

Any type of confrontation in person can be hazardous to your health!
Heck, we've even had T hunters threatened with guns locally...the guy
who did the threatening further suggested that he'd call the police
which the T hunters encouraged him to do(with there hands up or some
such..) The police wound up taking the guy with the gun to jail ;-)
But the best policy is to avoid such situations in the first place.

If you know the address of the offender then a card or letter stating
your position is a hell of a lot safer! If the problem continues
document you situation and turn it over to the FCC/OO corp.

:
: Well, there isn't too much bad with the no-code license. It's just when
: they start screaming for extra priveledges on HF etc that it gets me a
Why is it OK for them to try to get priveledges on VHF but not on HF? After
all it wasn't that long ago that no-code meant no license. Why do you draw a
line at HF? It sounds to me like "I had to so should you." If that is the
standard you wish to apply lets not give anybody civil rights either, unless
they can recite the Constitution (I had to in school).
I don't see how a code requirement advance any of the principles of our service.
One of the purposes of the amateur radio service is to create a reserve of
trained electronics techs. I think you could make a case for more stringent
tech. requirements.: little bit bent out of shape. As for the opposition to the no-code
: license, well... if you look at QST roughly 10 years ago there's a
: violent no-code stance in it.
^^^^^^^^^^^^^^^^^^^^^^
Do you mean a violent anti-no-code or pro-no-code stance?
Sorry I didn't keep up on QST until I became a ham in '91. If you mean
anti-no-code then I guess we can all grow and change with the times.
Growing should never stop.

One of our others duties is to train pro. quality COMMUNICATORS.
We don't need a morse code proficiency test to keep the ham bands from turning
into a mess like we see on CB. What we need to prevent that are a bunch of
amateurs that care enough to help others out and show them what being a good
operator is all about. But looking at the mess ours bands are already in I guess
that is not very likely to happen. In my brief time as an amateur I have
elmered four new no-codes into amateur radio. (my girlfriend is number 4 and
her license should be in Thursday's mail) They all know how to *operate* their
radios. They all help keep our local spectrum from looking like CB. They have
all participated in public service events, (my girlfriends first will be May
15th) they can all make a dipole and none of them whine.
I would rather hear a bunch of appliance operators who are coureous and
put out clean signals than some idiot who splatters all over the band and

care where he/she tunes up, tries to throw people off 'their' frequency because 'I always have a sked here' It is always the courteous operator, or usenet user that get listened to, not just the one who is heard most loudly.
:Tony

And I was doing so well at staying out of this whole thread. ;-)

|> radials.

I can definitely put in a recommendation for the GAP vertical. Just remember to guy it if you have any sort of wind in your neck of the woods.

The description you gave of the Scout sounds a lot like a modified version of my Ten-Tec Argosy II. 50 or 5 watts out, 80-10, cw and ssb. I have worked all 50 states and 62 countries on that rig and the GAP antenna. One thing you will find about Ten-Tec rigs is that they are built like tanks and are user-servicable. They don't even void the warranty if you modify the radio!

Ten-Tec also has one of the best service departments of any company I have ever done business with. When I had a problem with the digital display on my Argosy, I called them up and spoke to one of the engineers who had designed the radio. He told me exactly what was wrong and agreed to send me a replacement part. Total cost: $16.50 + phone call to Tenessee.

If you can find one, an Argosy II will probably go for $250-$350 used depending on its condition. However, I'm definitely not selling mine! :)

Date: 1993-04-27 22:49:28 UTC
From: tkelso@afit.af.mil
Message-ID: <tkelso.735950968@afit.af.mil>
Source record: 282580

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (513) 427-0674, and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

...

> I am also looking for info on GOOD coverage 2m repeaters along here:

...

It has been a while since I have driven from Wisconsin to Colorado
or Wyoming along I-80 but I would recommend that you check
for 146.76 and 146.94 repeaters along the way (.88 too) unless you get
more specific information. In the midwest 146.76 was frequently
the first channel used for a repeater output; in other areas .94.
Many of these systems used TV towers or at least tall buildings
and were built for large area coverage. Lincoln had a good
system on a TV tower; on the flat plains of Nebraska it
had really good range.
Being in Milwaukee you are probably aware that some of the
early big systems in Madison, Milwaukee and Chicago started on .76.
(Milwaukee had to move to .91 though).

There are some interlinked systems in the south west but
someone else will have to tell you about them. I used one
interlinked system while driving up the coast of northern California
into Oregon (but you're not going that far north).

45 watts with a 1/4 wave mounted in the center of your roof
should do rather well.

1537. TS430-S

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-28 03:10:03 UTC
From: n9ljx@en.ecn.purdue.edu
Message-ID: <1993Apr28.031003.24496@en.ecn.purdue.edu>
Source record: 282591

At Dayton I found some information about mods for the Kenwood TS430-S. The company that distributes the mod booklet (about 16 pages I am told) is I.R.C.(?). They also sell service manuals, which was why I originally stopped by the booth. Has anybody ever heard of these people, and is the mod sheet worth what they are asking for it? I guess they also sponser newsletters for users of the big 3 manufacturers rigs.

One mod in particular that I am interested in is the 'tuning upgrade.' This supposedly slows down the tuning rate to 2.5 KHz per rev when turning slowly, then when you spin faster the rate jumps back to normal. Has anybody installed this upgrade? How well does it work? Is it a simple mod or should it be done by professionals?

Thanks for any input.

1538. Need a copy of PRB1...

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-28 03:18:47 UTC
From: prt7u@holmes.acc.Virginia.EDU
Message-ID: <C66BvB.JJ@murdoch.acc.Virginia.EDU>
Source record: 282590

Howdy,

I need the help of the Hams out there on the net. I am going to sit for
my no-code tech exam this weekend. (But that isn't the problem)

Where I live they have antenna restrictions. (They have an association that
keeps a tight reign on people living in my subdivision) I talked it over with
my Mom and she didn't have any problem with me putting up a few antennas.
However, I don't wanna go through all of that trouble and then have the
association people tell me that they are gonna slap a lien on the house, rip my antennas,
down and charge me for doing it.

I talked to a buddy of mine and he said that it didn't matter what kind of
restrictions they had I could put up whatever I wanted based on this PRB1
thing.

So...I am looking for a place where I can get a copy of this so that I can
look it over and assess if I have a chance of putting up my antennas.

Any comments/suggestions would be greatly appreciated. I really wanna
get the antennas up and start talking.

Please respond via e-mail: prt7u@Virginia.EDU

Thanks in advance,

Pete

1539. Where to send IC229H for repair

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-28 03:50:47 UTC
From: arm@helix.nih.gov
Message-ID: <1993Apr28.035047.24393@alw.nih.gov>
Source record: 282609

After 2 years of service my Icom IC229H stopped transmitting.
I was in the middle of a conversation, running 50 watts,
while driving down Rt95 in NJ. SIL (Such is life).

Question. Where should I send the radio for repair? I
cannot find a phone number for Icom repair with the
original paperwork. There is a warantee service address.
I will start making calls tomarrow, but I am interested in
other folks experiences. Should I send it to Icom North
America? Should I look for a local place (in Washington, D.C.)?

Thanks for any tips, suggestions, phone numbers, testamonials,
etc. I will read anything sent by Email, but please accept
my thanks now rather than individually.

What Steve says is true. Some of these guys have some parts loose
and it is best to get the information, then let others deal with it.

The major frustration with this, however, is that these official
paths never seem to provide any feedback that anything was done.
Yes, they take the information, but there is little evidince that
they have done anything more than file it in the round file.

I have never heard anything back from either organization.

(In the OO case, it would have been nice to hear something like
"oh, they were new and didn't realize what they were doing was
illegal, and have corrected their ways, thanks...", but we don't
hear.)

I don't know if ARRL or FCC would be willing to accept the suggestion
that they provide some encouraging status feedback.

Check out the Yaesu FT-5100... the mounting bracket on the radio is a
clip-on deal that you can leave in the car and the radio snaps right
out. Plus the power connector is easy to work with.

But don't use that coax connector, it's lossy as all hell. You're best
off to remove it and replace it with more line to handle power. I used
to use one on my FT-2400.

> attitude. You can actually meet some nice hams in the CW portions of
> the bands. :-)

But... you must have passed at least 1A to get on CW on any portions of
the HF bands. Simple as that. I will say one thing, I enjoy the bottom
25 kc's of the bands because it's not as congested. If we start fucking
with the code requirements, it's gonna be a free-for-all down there and
that's not something I want, having worked to gain an Extra class
ticket.

And btw, if you happen to be a no-code and are offended by my
attitude... well there are two words for you....

..-. ..- -.-. -.- --- ..-. ..-.

I have always been curious - other than by SEEING the box, can they really tell? I've heard stories ranging from them connecting something to the cable that can detect bootleg boxes to vans driving down the street equipped with spectrum analyzers to sting operations where they broadcast a bogus offer for something free on a channel that would otherwise be encrypted and wait and see who calls. Is any of this true (except for the sting, which they actually did in New York)?

Hi, just heard the beacon LU1FHH on appr. 28265 kHz. It is not listed
in any of my sources. It transmits nothing but the call. Who knows
more? QTH? (the call is from the Argentine prov. of Santa Fe) Pwr?
Beam? Schedule?

>Can anyone confirm or deny this? Am I being fed a bunch of ..... ?

The AT-50 tuner and 500-Hz CW filter are both available in this
country. So is the MB-13 mobile mounting bracket. The AT-50 and
MB-13 became available shortly after the radio, and the CW filter
showed up about three weeks ago at a major dealer.

Message-ID: <1993Apr28.115049.15529@spider.co.uk>
Source record: 282602

In the UK we have heard many stories about changes affecting
Amateur Radio in Germany. For example, we have heard that the German
PTT is about to impose a 100W power limit on all bands, and that there
have been great changes in DARC. But mostly we have only heard rumours,
and it has been difficult to find the true facts.

I have been asked by the RSGB VHF Committee to try to find out more
information about the changes in Germany, so that we can understand
the situation, and also to offer any support we can.

I would be grateful for any information from German stations. Please
use e-mail if you would not like your comments to be widely read (I
promise to respect any requests for anonymity) or post if you think
many people would like to know: I am sure that there is a lot of
interest and concern world-wide.

From: jra@law7.DaytonOH.NCR.COM
Message-ID: <C671K4.C62@law7.DaytonOH.NCR.COM>
Source record: 282558

I recently saw an ad in one of the ham magazines for a line of VHF/UHF antennas designed for side mounting on a tower. I believe it's an all metal design, a folded dipole or somesuch. Now that I'm looking for an antenna that will be sidemounted, of course I can't find the ad anywhere.

Can anyone point me to the company that makes these antennas?

Thanks.

The linearity is definitely the issue here, and the plate modulation seems to be much more linear than screen modulation. For music broadcast, this is much more important than for communication service.

It is possible to go over 100% modulation on positive peaks for very brief amounts of time....

I bought a Gamber-Johnson "Super Slide" from AES. It was somewhat expensive, but it uses a modified BNC connector for the RF connection, so there is little loss in the antenna connection. I bought an extra base for the thing, I can use my rig in either car.

1559. Antenna Positionining

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-28 13:11:05 UTC
From: levine@mc.com
Message-ID: <1rlvp9$si@fugu.mc.com>
Source record: 282607

I am installing my first tower and have a few questions. I have received many different answers to these questions so I am convinced that there is no real physical answer, just a large group of opinions. I guess I want to see how the majority opinion lines up.

I want to put a Cushcraft A4S on my 50' tower. I want 40m capability also but cannot put up a real 40m beam on this mast because I will be putting an A3 (WARC bean) on the sam mast so I am limited by funds at this time. Question: Is it better to:

1) Put a 40m add on kit to the A4S. This is a dipole in the middle of the antenna and some claim it significantly hurts the 10-15-20m performance of the antenna.

or

2) Put a 40m rotatable trapped dipole parallel to the boom above or below the A4S by about 5 feet. By putting it parallel to the boom of the A4, some claim that there will be little impact on the tribanders performance.

2nd question

How far above the A4 10-15-20 tribander should the A3 17-12m antenna be? Cushcraft claims 5-7 feet is fine. Should it also be rotated 90 degrees to the A4 also

It would be nice to be able to model these but the Cushcraft rep at Dayton said that they could not provide pattern charts for any of these arrangements nor could they provide models to use with standard antenna modelling s/w. Furthermore, they said they didnt have pattern data for the A4 with the 40m add-on kit. Hard to believe, eh?

Contact your local National Weather Service Office. Look in the phone
book under U. S. Government, Dept of Commerce, National Weather Service.
Ask for the WCM (Warning Coordination Meteorologist) or the MIC
(Meteorologist In Charge). They usually provides the training
for the spotters.

>equipment, to get Class-C efficiency out of a linear final
>amplifier. They actually amplified the positive modulation
>peaks separately from the carrier and negative peaks and then
>combined them in an output network.

I was interested in trying to build a vestigial sideband rig for
75m AM while in college. My roommate Steve WA1QIX (now KA1SI) was
an expert on everything about AM and explained that a vestigial
sideband signal (carrier plus one sideband with the other sideband
not completely eliminated but way down) cannot be generated in the
final amp (well, not very easily anyway...). He explained that a
low level vestigial sideband signal can be more efficiently amplified
by using a Doherty amplifier than a traditional linear amplifier. I
searched through the library at WPI and was surprised to find that
the only references to Doherty amplification were in old dusty books
from decades ago (yes, Western Electric was prominently mentioned).
I guess that scheme isn't used anymore. I know that broadcast video
signals are vestigial sideband. Does anyone know what form of
amplification is used today in that application?

1563. Alinco DJ-162 Mod - (Here's How)

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-28 13:19:50 UTC
From: RON@NSULA.EDU
Message-ID: <930428081950.62eb@NSULA.EDU>
Source record: 282538

I requested this mod from the net several times and received no responses.
This morning I see were N0RWZ has posted his luck with a similar inquiry.
Well, I finally found it so here it is.

Extended RX/TX for Alinco DJ-162

1. Remove the battery pack.
Remove the battery plate from the bottom of the radio.
2. Remove the back cover from the radio.
This is a tedious process. You must take the knobs
off the top and remove the top plate first.
3. Under the Battery clasp on the side of the radio
(The little sliding thumb switch that keeps the battery
from falling off the radio)
you will find a yellow loop of wire. This loop is small
and hard to get to. You will need a very small pair
of cutters or scissors.

--Cut this wire.

4. Put the radio back together

5. Reset the radio. (You will lose your memories)

6. Go to the VFO mode.
Pressing the 'B' key on the keypad will now allow
you to cycle through the extended rx bands. It will
cycle from 2 mtrs, am aircraft, to 800. The radio
does NOT have the guts to receive 800. It just happens
to be in the processor so don't waste your time listening.

7. This same jumper also opens extended transmit.

Hope this helps out...

Ron Wright - KA5LUG
RON@ALPHA.NSULA.EDU

1564. Measuring SWR on Open Wire

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-28 13:40:50 UTC
From: hanavin@huey.udel.edu
Message-ID: <1993Apr28.134050.14050@udel.edu>
Source record: 282605

For a field theory experiment, we would like to measure the
SWR on a 30 foot section of open wire line.
We are using a frequency of 146.00 Mhz
The open wire
line has 9cm spacing with air dielectric, giving roughly
a 540 ohm impeadance. We were hoping to terminate it with
a 540 ohm resistor, and using a field strength meter to measure
the voltage maxs and mins along the line. Theory says, the
electric field should be relativly constant along the line with
the matched load, but we are seeing large variations of field
strength along the line. Hooking a SWR bride between the
transmitter and line shows about 1.2 to 1 SWR

Does anybody have any suggestions on how to do this?

Thanks-Chuck

I don't think you misread. I was just trying to make the point that plate
modulation doesn't have to imply that there's a modulation transformer.
With PDM you get high level plate (or drain or collector or whatever)
modulation without any heavy iron. Use the modulation transformer to anchor
your boat or something. :^)

>
>Howdy,
>
>I talked to a buddy of mine and he said that it didn't matter what kind of
>restrictions they had I could put up whatever I wanted based on this PRB1
>thing.

Ah.... I never said that Pete! What I said was that PRB1 (when used correctly) can often be used to obtain a COMPROMISE between your local CC&R's and your Public Service as an Amateur Radio Operator.

So, while I don't think you're gonna be able to use it to hammer them into allowing a 200' tower or anything, I think a small 2m beam on the same mount as a dual band vertical and a <10' roof tower should be doable... Esp if you stick it in the corner by those trees.

That's what I said... 'Whatever I wanted' Sheesh.... :)

Now, what do you experienced folks think?

>So...I am looking for a place where I can get a copy of this so that I can
>look it over and assess if I have a chance of putting up my antennas.

Better than just a copy of PRB1 are true anecdotal experiences in this type of situation, and of course the ARRL is a good place to get assistance, isn't it?

little@nuts2u.enet.dec.com (nuts2u::little) writes:

>You can actually meet some nice hams in the CW portions of the bands. :-)

particularly if you happen to be in the 30m band. I haven't been down
there for years (due primarily to the lack of space for a 30m dipole in
the high-rise I used to exist in, as well as at the apartment I live in
now), but when I lived in a duplex several years ago, I used to live on
the 30m band. most of the folks (ok, all but one or two) I worked on
30m easily fit into the category of the best hams I've worked, both in
terms of operating skill and the type of person they seemed to be.

you have to be at least a general to get on 30m, but if/when you do,
you'll enjoy it. also, don't get scared away by the high speeds most
folks run there...when I was just starting out there, everyone I worked
was more than ready to slow down for me. before long, I was chatting
with them at close to 30 wpm (never quite made 30 wpm...got stuck at
around 28 wpm).

now, I enjoy running into the same class of folks in the AMTOR/PacTOR
sub-band on 20m (which is all I have an antenna for right now).

--jim

PS: from what I'm told, the other WARC bands are just as good as 30m is.
don't know why that's the case, but hey, I'm not complaining. :-)

I am on my second Plymouth Voyager (really the same car) and
I have mounted my Kenwood 440 in both with a Spider antenna
on the tailgate. No Problems!!! It's a little tricky
getting the coax through the tailgate channels because of the
insulation, but with a little patience it can be done.

I'd check the the service manual before I'd buy, (ours is a
couple of years old). It's a great car...have fun.

>-Bob Longo

The typical TV set emits a startling amount of radiation. A properly
tuned receiver can pick up the set's horizontal sweep frequency, and can
even "hear" what sort of picture is being shown. Look at it like this:
A typical color set is modulating an electron beam aimed at the screen
which has something in excess of 15,000 volts pulling it. Since there's
no metal shield in front of the tube, it stands to reason that some
radio waves are being emitted from this high frequency, high voltage
beam. The frequency of this modulation can go as high as 6 megahertz.

Suffice to reiterate that a properly tuned receiver with an antenna
pointing towards your house can "see" the same picture you can. Spies
can do the same thing to see what's being displayed on the enemy's
computer terminals...

There is also a minute amount of radiation emitted from the LO (Local
oscillator) of the cable tuner box. This can also be used to determine
which channel you're watching.

Unless things have changed since I last visited there some years ago,
the daytime transmitter at KCBQ (1170 kHz AM) here in San Diego is a
50,000 watt Ampliphase feeding a six-tower antenna system. I believe
it's still in service. I think it's a pretty nifty trick to get 50kw of
AM out of a pair of PM transmitters - that engineer deserves a raise
(or at least fresh flowers on his grave, alas).

KCBQ's nighttime transmitter was a 5,000 watt plate-modulated jobbie -
the modulation transformer was about the size of a 4-person hot tub -
and they used a reduced antenna array. I dunno if that's still in service.

I'm told their signal is one of the strongest you can hear in the
Australian Outback. :-)

: wary. Then go before your local zoning board and get a variance.

Sometimes getting a variance is more trouble than it is worth...

I live in a small rural town that restricts any structure to 35 feet. I
obtained enough used tower sections (at a very resonable price)
to go up to 70 feet. At the time, I did not know of the restriction. Before
I put up the tower, I went to see the town building inspector to obtain
a permit. (Yes, the town is so small we only have one inspector and he works
half days.) It was at this time I learned of the restriction. I was told
that I could go higher, provided that I got the equivalent to a variance.

I have been down this road before with the town when I built my house. To
get a variance, the town requires about 4-6 months of time, a couple of hours
going through property records, and $175.00.

Considering the extra $175 and no guarentee that I would get the variance,
I opted for selling off the extra sections of tower and living with a
shorter tower. I may later decide that it is worth it and add sections!

Use mix 77 for HF frequencies and you should have good results. If you do not already have an Amidon catalog, I would recommend getting one. It contains all kinds of useful information about the different kinds of materials. (see any radio mag. for an Amidon advertisement).

Baluns formed this way work quite well. I have several in use.

1584. Envelope Modulation

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-28 18:08:58 UTC
From: a-kevinp@microsoft.COM
Message-ID: <9304281908.AA00619@netmail.microsoft.com>
Source record: 282553

Bob Myers KC0EW said of high level modulation:

This technique is used because it permits the final stage to run in class C, which is much more efficient than either the class A or AB "push-pull" required of a "linear" amplifier (which you would have to use to amplify an RF signal which had already been amplitude modulated). SSB transmitters are forced to use linear output stages, since it would be extremely difficult to generate an SSB signal by modulating the final.

I say:

Check back to the old books, when crystal filters were new and really expensive and phasing (and 3rd or Weaver method) has only just been invented. Linear amplifiers were a whole new technology too!

There are four methods used to generate SSB:

1) envelope following
2) filtering out one sideband
3) regular phasing method
4) Weaver method

People used to generate SSB by using high level AM modulation of a class C final (a well known technology) which was driven by an FM modulated carrier. My memory of the details are murky. I think you have to get the level and the modulation index right to get this to work but it was used!

For more info check out the SSB special issue in Proc IRE 1956. This issue also has a couple of other interesting papers -- Weaver outlines the Third method for generating SSB and Costas warns against narrow band techniques (shows how DSB can be very effective and poitns the way to spreadspectrum!).

Also around that time there was a note published on single sideband FM (!). Having a single sideband is just a property of the modulation technique. What we call SSB is a single AM generated sideband. This method gave you half a regular FM spectrum. Unfortunatly it doesn't seem to have any advantages (all the disadvantages of FM (poor weak signal performance) mixed with the disadvantages of regular SSB (frequency precision required).

I have often wondered if this method could be used to make higher efficiency QRP SSB rigs with modern components (VMOS FETs and ICs). The technique may be worth revisiting even if only to play with!

>--

ABSOLUTELY contact your congresscritter. There are quite a few that
are highly sympathetic to Amateur Radio - if you are fortunate enough to
have one of those, you just might stand a pretty good chance of getting
something accomplished.

We don't get to vote on FCC personnel, so they don't feel like
they are responsible to anyone other than their immediate supervisors.

On the other hand, a congresscritter is supposed to be OUR
employee - and sometimes they need to be reminded of that - and usually
a GOOD congresscritter has a staff that is mindful of that.

Go for it!

From: craigb@sdd.hp.com
Message-ID: <1rmj7jINN3lm@hpsdl136.sdd.hp.com>
Source record: 282544

Well. I posted a few days ago about my wife Carolyn and I passing
our nocode tests. I have received many replies. The net has made
me feel very welcome, so thanks you guys.

I also asked about some mail order places. I got a few names and
numbers, made a few calls, and here's what I found out:

Name Phone TH78 DJ-580
Oklahoma Communicatins Center 800 765-4267 Don't carry $368
Satellite City 800 426-2891 $444.44 $389.95
Electronics Specialists 800 688-0073 $459.95 $409.95
Burghardt Amateur Center 800 927-4261 $459.95 $389.95
Barry Electronics 212 925-7000 $599(!) Didn't ask...
Henry Radio 800 877-7979 Got lost in voicemail

I have another question: has anyone experienced particlarly good or
bad intermod performance with their dualband HT's?

The guy at Oklahoma Communications Center claims that the TH78 has
worse intermod problems than other HTs. A guy I talked to at HRO says
that they all have problems and are about the same.

Does anyone have any experience to bakc up either of these views?

Thanks!

From: lkraft@core.rose.hp.com
Message-ID: <C67J8s.Duw@icon.rose.hp.com>
Source record: 282550

Hello gang,

A colleague and I were pondering this scenario:

Suppose you generate a single carrier signal with no modulation, and feed this up to your x-element beam. So far, you are radiating a signal that has zero bandwidth in some fixed direction. OK, now say you rotate your antenna at a rate of, say, 1000 revolutions per second. To a distant observer, will this signal now appear to have sidebands spaced 1 KHz away from the carrier since he now only sees a carrier that "bursts" at a 1KHz rate? Remember, we are still only generating a single, unmodulated carrier. Are the "sidebands" a figment of the receiver?

Just curious....

1589. Helical filters for HT's

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-28 19:37:43 UTC
From: debaker@crchh7b0.bnr.ca
Message-ID: <C67L6v.8x@news.rich.bnr.ca>
Source record: 282556

I am looking for some information about filters for my HT.

I have a TH-78A, and when using the unit mobil, the front end
is frequently blown away by intermod. Sometimes it is soo bad
I cannot hear the repeaters at all. I have heard of helical filters
for HT's, perhaps as part of an amplifier package such as rfconcepts
produces.

Does anyone have any advice or recommendations about filters/amps/etc
that would improve the selectivity of my HT?

Thanks,

David Baker

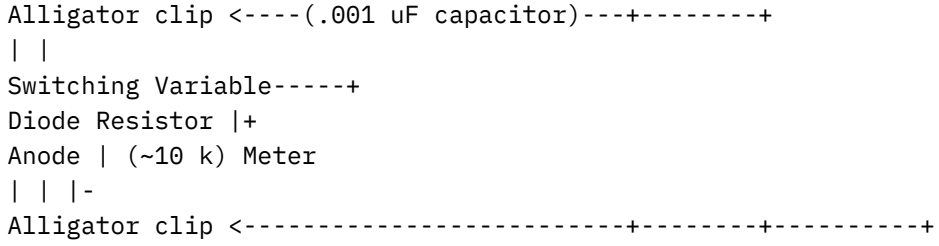
: a 540 ohm resistor, and using a field strength meter to measure
: the voltage maxs and mins along the line. Theory says, the
: electric field should be relativly constant along the line with
: the matched load, but we are seeing large variations of field
: strength along the line.

The field strength meter likely won't do a good job of measuring the voltage DIFFERENCE between the two wires, which is what you are trying to measure. Try this: Get a physically-small, high-sensitivity panel meter and kludge up an RF detector to feed it. Using short connections, alligator-clip the assembly to the two feedline wires. By moving the connection points up and down the feedline, find the ratio of maximum to minimum voltage, which is equal to the SWR.



: Hooking a SWR bride between the
: transmitter and line shows about 1.2 to 1 SWR

I'm assuming you are using some kind of balun or transmatch to match the 540 ohms to 50 ohms. If the matching device doesn't have a balanced output (to feed the balanced 540 ohm line), then that could explain why the field strength meter was reading standing waves: The common-mode current resulting from the balanced-unbalanced transition was making the feedline act like an antenna.

No, they are really there. It doesn't matter how you modulate the carrier,
you can't have modulation without generating sidebands. You'd get the
same effect by transmiting an unmodulated carrier and quickly switching
the antenna in and out at a 1 kHz rate. (For as long as the transmiter
stayed alive!)

What some cable companies have done is send a signal spike through the cable system. Their own boxes obviously would be protected somehow, but the bootleg boxes would be affected. When the person calls in to report problems with the signal, the police would be on their way.

Making some assumptions here (Like you are using a 50 ohm unbalanced
SWR bridge feeding into a matcher or balun). If that is the case,
then you can have high SWR on the balanced portion that still matches
at the transmitter end. This is due to the reflected wave canceling
an out of phase condition--such as having a positive imaginary component
canceled by a negative component on the balanced section. Same idea
as using a matcher to load a random wire antenna--the impedance to
the antenna may be very different from the transmitter output
impedance, but an SWR bridge between transmitter and matcher looks good.
A balanced 540 ohm SWR bridge at the open line may show a completely
different story. You can in fact derive the SWR by measuring the
peaks and valleys of the voltage along the ladder line.

Chuck-

Your field strength approach may work, but you need to devise a consistent method of coupling to the transmission line. The coupling should be "loose" enough not to upset the voltage distribution on the line, and should be repeatable.

You didn't mention one ingredient for calculating impedance of a transmission line - the diameter of the conductors. If you didn't consider both conductor diameter and spacing, your formula may be in error, which might account for your discrepancy. A third ingredient, dielectric constant, doesn't apply to the open wire configuration, since it equals one.

By one definition, SWR is the ratio of load resistance to transmission line characteristic impedance, assuming a purely resistive load. Therefore, if your voltage varies along the line, you haven't satisfied the requirement.

Another thing about your posting - you mention hooking up an SWR bridge. Most common Ham bridges are designed for 50 ohm co-axial transmission lines. If you connected such a bridge to an open wire line, the results would be hard to predict. Needless to say, most school lab experiments involving SWR, probably use co-axial hardware, including slotted lines and voltage probes. I think that making those measurements on open wire line, is quite a challange!

The typical SWR bridge isn't actually a "bridge" in the sense of a Wheatstone bridge. It is usually a "reflectometer", that has both inductive and capacitive coupling to the transmission line. It actually senses forward and reflected power. It has a scale calibrated in SWR, rather than requiring you to do the calculation. If you don't already have

a balanced bridge of the correct impedance, you may be able to construct one using a section of the open wire feedline being measured.

This is actually done for VOR aircraft navigation stations (the older
ones anyway). The antenna pattern revolved at a 30 Hz rate. The
phase reference signal came from a 9960 Hz am tone that was FM'd at
a 30 Hz rate. The modulation percentage was 30% fm subcarrier,
30 % antenna modulation, and 30-40% voice.

Well, several people asked so here goes: this info is from a paper by Edward C. Westenhaver of Harris Corp., titled "Fundamentals of PDM". PDM stands for Pulse Duration Modulation. You can think of the PDM modulator as a voltage regulator connected in series with the final. The RF chain is conventional: osc., driver, final. The low level stage of the modulation uses a 75 kHz square wave to sample the audio. The width of the pulses carry the audio information, and this pulse train is amplified and fed to the modulator. The plate voltage fed to the final and modulator in series is twice the rated voltage for the final. If a train of pulses of equal width is fed to the modulator, the modulator tube will drop half the total voltage, and the final has rated plate voltage. If the "on" pulses are longer than the "off" pulses, the modulator drops less voltage and the final gets more. If the modulator is all the way on, the final gets the full plate voltage (2X rated), which is the same as 100% positive peak. When the modulator is shut off, the final gets no plate voltage, a 100% negative peak. There is a low pass filter between the modulator and the final to keep the 75kHz out of the final. The technique was introduced in 1967 - I don't know who else uses it, but Harris apparently does. I hope I got the basics across - the paper has circuit details, theory, etc.

I have no connection with Harris - just interested in this concept.

As an EE, I prefer that the equations are stated that way! The basic
relationships are:

i = C dv/dt and v = L di/dt (ref: physics/EE/ARRL Handbook)

These are the equations which model "ideal" capacitors and inductors. The
current through a capacitor equals the time rate of change of voltage
across the plates multiplied by its capacitance, C. For an inductor, the
voltage drop across its terminals equals the time rate of change of current
flowing through it multiplied by its inducatance, L.

For the phase relationships, let v = sin(t) (no loss of generality here)

Capacitor:

i = C*d/dt[sin(t)] = cos(t)*C

if you plot v=sin(t) and i=cos(t) vs. t, you'll see that the positive
current peak leads the positive voltage peak by 1/4 of a cycle; 90 degrees.

For the inductor, let i = sin(t);

v = L*d/dt[sin(t)] = cos(t)*L

Here, the voltage peak is 90 degrees in front of the current peak.

Therefore, in a capacitor, current leads voltage, while in an inductor,
voltage leads current.

The energy equations for an inductor and capacitor:

U = (1/2)*C*v^2 and U = (1/2)*L*i^2

Can be derived from these fundamental relationships (and a few others), but
do not tell much about the voltage/current phase relationships.

I hope this helps!

As far as who sees these sidebands, let me modify the scenario. Say you now have an airborne receiver that circles the transmitting antenna in sync with the beam. Does the flying receiver see these sidebands (assuming the receiver sees no change in amplitude during the trip around)? I don't believe so, but a fixed observer will see the modulation. I'm just curious as to whether it's something that is created as part of the detection process, or do these sidebands accompany the carrier to the far regions of space (in a huge rotating disk pattern).

1600. Differential equations and power.

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-28 21:32:20 UTC
From: dadams@cray.com
Message-ID: <1993Apr28.163220.6374@hemlock.cray.com>
Source record: 282571

I have been reading through the licence manuals and...

Durring the disscussion of how current leads voltage in an inductor
by a phase angle of 90deg, It is apparent that there are a few
differential equations lying just below the surface here, that might
help explain the subject to a mathophile like my self. Have any of
you ever seen the subject presented that way? Does it lead to
a mathimatical explaination of how phase angles are calculated?

How are the equations usually stated?

"Energy is stored in the magnetic field of an inductor when current
increases through it..."

Energy = K * I' ?

What symbol is used for energy? Does the constant K relate to the inductance?
What other factors would it relate to?

"... and in the electric field of a capacitor when voltage across it increases..."

Energy = K2 * E'

Intuition tells me that K2 must relate to the characteristics of the capacitor.

Can someone help me continue these to the point where the solutions to the
differential equations are the observed current and voltage etc?

I think I could do this myself, but I think I have forgotten to much of
the physics and I am getting myself confused. :-{.

This is all "urban legend". A cable company could not send a "spike"
which physically damages anything, or people with cable-ready TVs and
VCRs would ALSO have damaged components, not just the "pirate" decoders.

The stories about sting operations where brain-dead people call 800
numbers for too-good-to-be-true free T-shirts are true, the stories
about vans with weird antennas are true (leak detection as required
by the FCC!) and detecting unauthorized cable taps (but not necessarily
decoders) via time-domain reflectometry are also true. But "bullets"
are a story invented by cable co's to scare people. It happened in
one instance where the cable co. reverse engineered a pirate decoder
which a lot of people were apparently using, from which they found
a way to disable these "pirate" boxes with the normal data stream.
Simple as that.

More info from the rec.video.cable-tv FYI:

.....Test Chips / "Bullets".....
So-called "test chips" are used to place single-piece converters (that
is, units with both a tuner and a descrambler) into full service. There
are a number of ways to accomplish this, but in most cases, the serial
number/market code for the unit is set to a known "universal" case, or
the comparison checks to determine which channels to enable/disable are
bypassed by replacing an IC in the unit. The latter type of chip is
superior because it cannot be disabled, even if the cable company finds
out about a "universal" serial number. (When that happens, the cable
company has the potential to disable the converter anyway, with a
so-called "bullet".) The "bullet" is nothing more than the normal cable
data stream with the appropriate code to disable a converter which has
this serial number, or which doesn't have this market code, or... etc.
The "bullet" is NOT a harmful high-voltage signal or something as the

cable companies would like you to believe -- if it was, it would damage anyone with a cable-ready TV or VCR connected to the cable (not something the cable company wants to deal with!) The only way to get "caught" by such a signal is to contact the cable company and tell them your illegal descrambler just quit working for some reason. :-) Not a smart thing to do, but you'd be surprised (especially if it's someone else in the house who calls, like a spouse, child, babysitter, etc.)

Hi Clark,

HossTraders (or, as I understand some people are calling it, "Deerchester") is May 7-8, 1993. Gates open at noon on Friday, May 7 for buyers and sellers both. Entry fee is $5 per person, camping is allowed (or at least it had better be allowed -- we're bringing the pop-up camper! :-)

Dunno about how to get there -- anybody got good directions to Rochester, NH?

I am fairly certain that all TV broadcast transmitters, even UHF,
do exactly what you said can't be done (easily): they have cavity
filters at the output frequency between the final amplifier and the
antenna. They not only shape the signal into vestigial sideband but
also act as a diplexer between the video and audio transmitters. Hence
they are called "filter-plexers". This is according to a friend who
worked at a UHF TV station 25 years ago.

Of course, TV transmitters are fixed frequency and ham rigs are not
(well, maybe in the case of 75M AM, they are essentially fixed frequency
:-) :-)) so the TV technique isn't too helpful to you.

1607. Feedback needed, Outbacker or Isoloop users

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-28 23:35:47 UTC
From: wf9s@wf9s.ampr.ORG
Message-ID: <2174@wf9s.ampr.org>
Source record: 282573

Hello All,
I am looking for some info, success stories, not so success stories
or just some general feedback from some people who have used or are
using the Outbacker or Isoloop HF antennas. I guess mainly the Outbacker
but both are a consideration. I am very limited with space so a small
multiband type antenna is gonna have to be the choice.

Thanks in advance for your replies...

73 ... Todd Spicer wf9s@pgd.adp.wisc.edu

1608. Re: TS-50 Accessories

> Can anyone confirm or deny this? Am I being fed a bunch of ..... ?

Bill-

How recently did you make the call? I've had the AT-50, CW filter and SO-2 TCXO, for over four weeks now. It's true that the AT-50 and CW filter weren't available when the TS-50 first came out, but the SO-2 TCXO is the same one used in the TS-450, and has been available for quite a while. I purchased mine from Amateur Electronic Supply. Although they don't have the best prices, their Orlando store is located within 45 miles of my home.

If you're using the TS-50 mobile, the CW filter may be of little use. I prefer to tune in a CW station in wide mode, and only switch to narrow mode when it is tuned close to frequency. It requires use of the TS-50's setup menu to make the change, so it isn't very convenient while in motion. I haven't determined whether or not it can be installed on a microphone function button. However, the setup menu comes installed on button number one, from the factory.

I operate my TS-50 in the car. Temperature can rise quite high in a parked car in the Florida sun. I operate a lot on ten meters, where the standard 10 ppm oscillator could easily vary 300 Hz over such a wide temperature range. It has been nice having the SO-2 TCXO, who's 0.5 ppm oscillator shouldn't vary more than 15 Hz on ten meters. So far, I haven't observed any more variation than that. On the other hand, the TCXO may be a waste of money for installation in an air-conditioned environment.

1609. Possible to parallel x-formers??

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-28 23:50:12 UTC
From: exualan@exu.ericsson.se
Message-ID: <1993Apr28.235012.18379@exu.ericsson.se>
Source record: 282574

Hi,
In the never ending quest to pinch a penny I am trying to avoid
buying a 18V, 20Amp transformer, for my future 13.8V power supply.

In the junk box sit 2 different 10Amp (appx.), 18V (appx.) used
transformers. The question: Can I wire them in parllel? If so,
which is better, before or after the bridge rectifier (obviously,
if after, then I will need 2 bridges). Also, how much difference
will a volt or 2 in the secondary make? I do have access to the
windings so adjustments are possible.

Speculations welcome, as well as first hand info but please identify.
Answers to me directly or to News as you see fit.

Thanks,
Alan Malkiel, KE5JL
e-mail exualan@exu.ericsson.se

1610. Current handling capacity and Jones connectors...

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-29 00:06:21 UTC
From: yee@mipg.upenn.edu
Message-ID: <123855@netnews.upenn.edu>
Source record: 282576
Cross-posted to: rec.radio.amateur.misc,sci.electronics

I was looking over the schematics for my Yaesu FT101B and was working out how the DC power cable was hooked up. The transmitter is rated at using 20 amps DC. Jones connectors are only rated to 10 amps. While the current draw of 20 amps is only sporadic (it only draws 0.5 amps in receive), I am concerned about this. I have absolutely no intention of changing this plug since I don't want to mess with that which is not broken; I mention this because of my plans for my shack.

I am interested in standardizing all my 12V equipment to a single plug. I am considering using a 2 pin Jones connector for this purpose. Can I expect problems drawing up to 20 amps on it? Is it's current rating sufficiently conservative to do this?

Perhaps it is a mistake to standardize on a 2 pin Jones. Would a 4 pin Jones (where I use 2 pins for positive and 2 for negative) be better? Are there more appropriate connectors to use?

```
Archive-name: radio/ham-radio/hams-on-usenet/part1
Last-modified: $Date: 93/04/28 17 10$
Version: $Revision: 1.01 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into four parts. This
First part contains primarily European calls with US call districts 0 and 1.
The index of parts:
Part 1 contains 4x1pi through k1zz
Part 2 contains n2aam through kc4zwi
Part 3 contains kj5aa through n7zzd
Part 4 contains wv8a through zl4ms

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok)
#

# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything
# return edwar1@scooner.bunny.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update Apr 28 1993
#
# This document may be distributed freely, as long as there is no financial
# gain. I do not condone this list being used for generating junk mail or
# other annoyances as this is not the purpose of the list. If you are in this
# list and wish to keep your entry hidden, or that the name I have here be
# changed (My middle name is Gregory and I am **** proud of it :-), I would
# oblige.
#
# Entries have this format (-> denotes separated by at least one tab):
# Address (Name) -> Call -> Date
#
```

Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. Some GENIE Hams are included
(Generated by Brian Murrey/KB9BVN) in this list, their addresses are
listed as ??@<GEnie> which of course is unaddressable. Mike Shirley
WB6WUI mikey@slic.cts.com is willing to relay manually to GENIE.
<user>@genie.geis.com may be used from the Internet, but this is an
optional extra cost service to the GEnie user and may, or may not work.
For addresses like #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-MM[-DD] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987 or 1992 US). ? after means recheck may be
required (eg. Call does not match name).

1612. Radio Amateurs on USENET List Apr 1993 Part 2 of 4

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-29 00:20:16 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1993Apr28.2@ve6mgs.ampr.org>
Source record: 282478
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part2
Last-modified: $Date: 93/04/28 17 16$
Version: $Revision: 1.01 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into four parts. This
Second part contains primarily US call districts 2, 3 and 4.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok)
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything
# return edwar1@scooner.bunny.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update Apr 28 1993
#
# This document may be distributed freely, as long as there is no financial
# gain. I do not condone this list being used for generating junk mail or
# other annoyances as this is not the purpose of the list. If you are in this
# list and wish to keep your entry hidden, or that the name I have here be
# changed (My middle name is Gregory and I am **** proud of it :-), I would
# oblige.
#
# Entries have this format (-> denotes separated by at least one tab):
# Address (Name) -> Call -> Date
#
# Address
# Network address popularily used by individuals on the network. Although
# the address that many news posters add may be incorrect, personal
# e-mail contacts or updates are always placed first in the list of
# duplicate calls. Removal of entries is by complaint only, so some
```

(mainly .EDU) may be invalid over time. Some GENIE Hams are included
(Generated by Brian Murrey/KB9BVN) in this list, their addresses are
listed as ??@<GEnie> which of course is unaddressable. Mike Shirley
WB6WUI mikey@slic.cts.com is willing to relay manually to GENIE.
<user>@genie.geis.com may be used from the Internet, but this is an
optional extra cost service to the GEnie user and may, or may not work.
For addresses like #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-MM[-DD] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987 or 1992 US). ? after means recheck may be
required (eg. Call does not match name).

1613. Radio Amateurs on USENET List Apr 1993 Part 3 of 4

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-29 00:27:57 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1993Apr28.3@ve6mgs.ampr.org>
Source record: 282479
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part3
Last-modified: $Date: 93/04/28 17 25$
Version: $Revision: 1.01 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into four parts. This
Third part contains primarily US call districts 5, 6 and 7.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok)
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything
# return edwar1@scooner.bunny.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update Apr 28 1993
#
# This document may be distributed freely, as long as there is no financial
# gain. I do not condone this list being used for generating junk mail or
# other annoyances as this is not the purpose of the list. If you are in this
# list and wish to keep your entry hidden, or that the name I have here be
# changed (My middle name is Gregory and I am **** proud of it :-), I would
# oblige.
#
# Entries have this format (-> denotes separated by at least one tab):
# Address (Name) -> Call -> Date
#
# Address
# Network address popularily used by individuals on the network. Although
# the address that many news posters add may be incorrect, personal
# e-mail contacts or updates are always placed first in the list of
# duplicate calls. Removal of entries is by complaint only, so some
```

(mainly .EDU) may be invalid over time. Some GENIE Hams are included
(Generated by Brian Murrey/KB9BVN) in this list, their addresses are
listed as ??@<GEnie> which of course is unaddressable. Mike Shirley
WB6WUI mikey@slic.cts.com is willing to relay manually to GENIE.
<user>@genie.geis.com may be used from the Internet, but this is an
optional extra cost service to the GEnie user and may, or may not work.
For addresses like #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-MM[-DD] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987 or 1992 US). ? after means recheck may be
required (eg. Call does not match name).

1614. Radio Amateurs on USENET List Apr 1993 Part 4 of 4

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-29 00:32:44 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1993Apr28.4@ve6mgs.ampr.org>
Source record: 282480
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part4
Last-modified: $Date: 93/04/28 17 30$
Version: $Revision: 1.01 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into four parts. This
Fourth part contains whatever is left over ... US call districts 8, 9,
Canadian, and spots left here and there over the globe

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok)
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything
# return edwar1@scooner.bunny.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update Apr 28 1993
#
# This document may be distributed freely, as long as there is no financial
# gain. I do not condone this list being used for generating junk mail or
# other annoyances as this is not the purpose of the list. If you are in this
# list and wish to keep your entry hidden, or that the name I have here be
# changed (My middle name is Gregory and I am **** proud of it :-), I would
# oblige.
#
# Entries have this format (-> denotes separated by at least one tab):
# Address (Name) -> Call -> Date
#
# Address
# Network address popularily used by individuals on the network. Although
# the address that many news posters add may be incorrect, personal
# e-mail contacts or updates are always placed first in the list of
```

duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. Some GENIE Hams are included
(Generated by Brian Murrey/KB9BVN) in this list, their addresses are
listed as ??@<GEnie> which of course is unaddressable. Mike Shirley
WB6WUI mikey@slic.cts.com is willing to relay manually to GENIE.
<user>@genie.geis.com may be used from the Internet, but this is an
optional extra cost service to the GEnie user and may, or may not work.
For addresses like #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-MM[-DD] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987 or 1992 US). ? after means recheck may be
required (eg. Call does not match name).

1615. repeaterfrequencies

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-29 01:41:00 UTC
From: uk08173@mik.uky.edu
Message-ID: <C6820D.K3A@ms.uky.edu>
Source record: 282502

Hello,
Would someone please mail me the repeater frequencies for the Ky,
Ind, and Ohio 2m and 70cm. I know that this is a lot, but if nothing
else can you send Ky :) I realize that the directories are only a few
dollars, but after just footing the bill for a new HT, I couldn't afford
to pay attention.
Thanks in advance,
JSD (callsign pending processing)

Not to continue fanning this flame, but it seems the "pot" is calling
the "kettle" black here.

You seem to make some good points here, but leap to some ill-founded
conclusions of your own. (As I am no doubt doing, even as I type1 ;^)

> 1) theory is easy for some people and not for others
> 2) code is easy for some people and not for others
Yes, this is how it seems to work. Now, how should YOU, with a CW learning
difficulty, address this issue, given that you seem to want to copy 13
or more wpm? Right and Left brain-ness isn't the drill here. What you
DO with your brain is...

> For 6 months, I have been studying the morse code. I work at least 1 hour
> per day in 30 min sessions.
I believe, and experience at teaching CW would bear me out, that 30
minutes at a stretch *TO LEARN* is too long. 4 15 or 6 10 minute
sessions would actually allow you to progress faster and become less
frustrated.

> I have the ARRL tapes, some other company tapes,
> morse by rythmn and self hypnosis tapes. I also attend a class that is also
> allowing me to practice a little.
Just a guess here, but I think you have four or more DIFFERENT tapes,
each with a slightly different sending speed and character spacing to
achieve the speed you are trying to copy. This means you are actually
trying to learn CW as four or more manifestations of language rather
than ONE. SLOW DOWN. STOP!!! Get a grip and go at this in the easiest
and best way to learn ONE language, not four or more!

You have SuperMorse, so I'd recommend you focus there. READ the doc...
it is quite good on what happens with "Farnsworth" character
development and will help you understand some of this approach.

Then, crank the character speed UP to about 23 wpm, and set the word
speed at about 7...always a little faster than you can copy solid.

Next, get yourself some graph paper to copy on...

Then, and this is the MOST difficult part, learn to forget and let go
when you miss a character. Can't write the character you heard? Skip
the box on teh graph paper and move on. NOBODY has to be perfect
copying Morse...the test only requires 70% comprehension, and if you
can let a character go, by playing "Vanna White" you can probably
figure out what you missed LATER -- do NOT try it when yo are copying!

Now that you have given yourself permission to not be perfect, and the
session is only going to be 10 minutes long, there is even a chance
you could make it fun... try short e-mail messages, fed to SuperMorse
as files to send...Thought of the Day makes for great practice, and
keeps things fun. Sure, if you have read it before, you may recognize
the text as it is sent, but after a while it won't matter anyway.

Make this fun, because it can be (and is to some people)...
Personally, it took a long time (20 years of frustration and a few
abortive attempts at 20wpm) before I finally let go of having to be
perfect, and when I could be less than perfect, I passed!

Enjoy the CW... It is different, part of the romance, history and
heritage of Ham Radio, and what separates us from people who can
merely trade money for a license to yak...

> So, don't tell me how easy it is to learn the code and that some people you
> know did it after studying a couple of minutes. Great for those people!
And very irrelevent to the one person that counts.... you!

> I'm now a ham (as soon as the FCC does its part) and proud of it.
Congratulations! Welcome to the hobby.

> I intend
> to upgrade as soon as I can get past the code obstacle. It isn't easy but it
> is worth it.
The second half of that attitude statement will work for you. Treating
teh Morse requirement as an obstacle rather than an opportunity will
keep it so...

> Although I question incentive licensing when it makes some
> people think that they are superior to others.
Erich, even MONEY can make some people feel superior to others, and
when one is born to it, the individual has done NOTHING to earn it and
is not entitled to the feeling...but they have it anyway...That is
life.

73 ES GUD LUCK...e-mail me if you need more help/encouragement

> : >
> : >Yes

No, what he sees is (assuming antenna is far away, i.e. a point source)
just
a steady signal. It is not really "modulated". Imagine what a simple
diode detector receiver would get --- DC, a steady signal.!!

> : >: Remember, we are still only
> : >: generating a single, unmodulated carrier. Are the "sidebands" a
> : >: figment of the receiver?

There are no sidebands -- see below.

> : >No, they are really there. It doesn't matter how you modulate the
carrier,

Yes, it does matter. For sidebands to exist, one must non-linearly
modulate
a carrier. The math works out to the vector multiplication of two signals.
Happens every day in every AM transmitter.

> : >you can't have modulation without generating sidebands. You'd get
the

But you don't really have "modulation". All you have is the _addition_ of
a signal (1KHz) to another (carrier) by physical means (again assuming
point
sources and no near-field effects of phase or frequency change) rather

than
electrical means.

> : >same effect by transmiting an unmodulated carrier and quickly
switching
> : >the antenna in and out at a 1 kHz rate. (For as long as the
transmiter

Yep, still no sidebands.

> the trip around)?

Again, there are no sidebands. Same scenario.

> I don't believe so, but a fixed observer will
> see the modulation.

The fixed observer will again just see a fixed signal (assuming he was
smart enough to filter out the carrier as all detectors do).

> I'm just curious as to whether it's something
> that is created as part of the detection process, or do these
> sidebands accompany the carrier to the far regions of space (in
> a huge rotating disk pattern).

Nothing is created in detection. A true AM signal (or DSB/SSB) will
depends
on having two discrete signals to mix together (multiply) to recreate
the intelligence.

An therein lies the answer. What intelligence is really communicated by
switched
on/off carrier (or a varying carrier as in your example)? The answer is
NONE...
unless an additional signal is introduced (BFO) to recreate the
intelligence.

Remember the whole purpose of modulation is to carry intelligence. An
there
is some law (forgive me, 25 years have passed since my last physics class)
that says that intelligence REQUIRES bandwidth ... the more intelligence
(higher baud rate, wide frequency transmission, color TV) the wider the
bandwidth. Zero bandwidth = zero intelligence; in other words you may be
changing what someone "sees" by rotating your antenna, but you didn't

pass along any useful info.

If you want to "see" your 1KHz signal you need throw in a local
unmodulated
carrier of _exactly_ the same frequency. .. from the ashes, RADIO.

>
> L

For the small errors in this response, forgive me ... the answer was
obvious,
but the explanation was left on an exam paper many years ago.

From: haynes@cats.ucsc.edu
Message-ID: <1rnnsmINNd59@darkstar.UCSC.EDU>
Source record: 282484

It's not a good idea unless the transformers are identical, and even
then it's probably not a good idea. If the output voltages are at all
different, even at no load you'll get current circulating between the
secondary windings, causing heating. Even if the open-circuit
voltages are equal they probably won't be equal when current is drawn.

If you do the paralleling after the rectifiers they you get rid of
the circulating currents at no load; but you still have the problem
of getting them to share the load equally.

Howdy Folks,

I'm considering the purchase of a Kenwood TH-78A 2m/440 dual band HT. Does anyone know of any after-market mods for the rig? Can its UHF transmit range be extended further into the 430 Mhz region? Currently it's limited to 438-450 Mhz Tx.

Also, if you have any comments on the rig -- good or bad -- I'd love to hear them! Thanks for your help.

1624. WANTED: Someone to send me a Sony ICF-SW1E

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-29 08:08:09 UTC
From: richard@harlequin.co.uk
Message-ID: <C68JxL.Gp@harlequin.co.uk>
Source record: 282446
Cross-posted to: misc.misc,rec.radio.shortwave,rec.radio.amateur.misc,rec.radio.swap,aus.radio,alt.radio.scanner

I was going to buy a Sony ICF-SW1E, a very cute radio receiver small enough for me to carry around at all times. (It's smaller than a Walkman.) They used to cost about 125 pounds (~$180). However, when I went to the shop to get one the price had risen to 175 pounds (~$260). I suspect this has something to do with the devaluation of the pound.

Anyway, if someone can find such a device at a lower price I'm willing to pay postage and a small commission. I live in the UK.

If anyone has recommendations concerning the ICF-SW1E I'd be interested to hear them. I'm interested in casual scanning of SW and also in good reception of local and national radio.

Thanks.

Naw, I'm just a CBer that's bootlegging. ;-) Nice thing about many call signs, you really can't tell what class the operator is for sure. Maybe the free-for-all down there will drive the jerks like you off the bands. And from your posts here it seems like the only thing you've worked at is being arrogant and obnoxious. If you represent the average operator on the bottom 25 kHz of the bands, then maybe that's why they call it the bottom of the band.

>Woops... forgot:

Hahahah, that's great. Was that American Morse Code for 3UJK 5QQ or did you invent a new character in International Morse Code. You must have some great QSOs on the bottom 25 kc (how quaint) of the bands. Or perhaps you copied 20 WPM for your 1C but you've since forgotten the characters?

And as always 73,

I believe he is referring to the UHF _novice_ license, not the traditional
(well, since the Seventies anyway) "entry class" (sic) Class B license, which,
as you infer, gives an amateur full privileges to all bands above 30MHz.

Hi

I would like to start a radio station at University. I am from South Africa, and down here we don't have as much radio stations as in the USA for instance. For example the entire AM band from 800kHz to 1.4MHz is available for broadcast. I would therefore like to build a 1Mhz AM transmitter with a 2km radius, so that I could reach the entire University.

What I am looking for is a circuit which can accomplish this. Is there anybody who can help me. Please be specific about the details of the circuit and don't make it to complicated, because I am not that good with electronics and you don't get strange components in South Africa. The best way for me would be to receive a ORCAD.SCH file, or such like.

Thanks a lot

Francois

Radio amateurs do it through the air.

I _used to_ own an Alinco DJ-580. When used in my car with a 1/4 wave
mag mount, the intermod (front end overload, actually) was so bad that
the radio was virtually unusable. After returning it to Alinco (twice)
I finally gave up and traded it in for a mobile rig. I also own
an Alinco DJ-F1T --- great radio, built like a tank, no intermod!

From: root@raider.raider.net
Message-ID: <root.736086228@raider>
Source record: 282421

Hi,

About 1am CDT (or so) on 4/27/93, I was on 145.55 listening for Shuttle activity, when the squelch broke at a time I knew that the shuttle was no where near in range. Well, I figured MIR packet, but no.... a Russian voice! Very strong too. But it did *NOT* sound like a QSO and likewise it was very unusual to hear them speak Russian over the southeast US. Anyway, I was reading the most recent Space News here on R.R.A.M. and noted that MIR was planning EVA for the 27th. Well, I had read somewhere WAY back that MIR sometimes used the HAM fqs for their own activities, so I suppose what I might have heard was one-side of a duplex voice link between the guy inside and the guy outside (???)! As I said, the tone was not that of a QSO but sounded like someone on the job (as you might hear on a scanner).

Anyway, I could not get my darn tape recorder running in time to catch more than a few words before it floated out of range (brain was still in bed downstairs! :-)). If I had gotten enough voice recorded I could have had it translated by a friend of mine and then I might have known for sure.

Needless to say, it was still a charging experience as I have only caught them on voice once before MANY moons ago.

As far as packet is concerned, I think that they may have improved their antenna situation some as I had no problem linking to the packet robot on 5 watts.

Just an interesting experience I thought I would share.

73,

Mark

"Suppose you generate a single carrier signal with no modulation and
feed this up to your x-element beam. So far, you are radiatinmg a
signal that has zero bandwidth in some fixed direction. OK, now
say you rotate your antenna at a rate of, say, 1000 revolutions per
second. To a distant observer, will this signal now appear to have
sidebands spaced 1 KHz away from the carrier................."

It certainly will. Radars that use Doppler discrimination see this effect
as helocopter rotor modulation, propeller modulation, etc.

Say, I would like to see that x-element beam rotating at 1000 rpm - from a
distance.

Consider this from the receiver's perspective. Whether you modulate
the energy being *received* by
* by rapidly turning the transmitter on and off
* or by rotating the transmitted beam of energy in and out of receiving
antenna's range,
the effect is the same.

In fact, the Doppler directions finding units use this principle and achieve
it by rapidly rotating (electronically) antennas.

Source record: 282500

>Does anyone have any advice or recommendations about filters/amps/etc
>that would improve the selectivity of my HT?

David:
The Ramsey 2 meter power amp has a note in it that says you can put a helical filter in the receive preamp circuit. They reference Digi-Key as a source for the TOKO helical filters. (about $25) According to their notes, you need to have a TR switch because you DO NOT want to transmit through a helical filter. I am not sure how it is connected. Maybe someone else has some first hand experience

I have been using the Ramsey amp to boost the power for my HT. It gives about 25 watts out for 2.5 watts in and 5 watts out for 250 mw in.

I believe Digi-Key's number is 1-800-Dig-iKey.

Some of the more expensive 2m amps might have that feature built in. I'm not sure. I know most of them have receive pre amps.

1638. Re: Possible to parallel x-formers??

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-29 15:04:23 UTC
From: exualan@exu.ericsson.se
Message-ID: <1993Apr29.150423.3722@exu.ericsson.se>
Source record: 282510

In article 1rnnsmINNd59@darkstar.UCSC.EDU, haynes@cats.ucsc.edu (Jim Haynes) writes:
(warnings about circulating currents deleted)

>If you do the paralleling after the rectifiers they you get rid of
>the circulating currents at no load; but you still have the problem
>of getting them to share the load equally.

Well, 25 amp bridge rectifiers are cheap so no problem with that suggestion.

Speculating now -
Is it reasonable to assume that the internal resistance of the secondary wire will at least limit the current of any single transformer of the bunch to within its design limits? (Using an additional assumption that the secondary voltage and current ratings are within, lets say, 15% of each other.)

Thanks,
Alan, KE5JL

1639. Re: Current handling capacity and Jones connectors...

Newsgroup: rec.radio.amateur.misc

Message-ID: <9304291509.AA26478@emx.cc.utexas.edu>
Source record: 282512

The Amateur Radio Emergency Service (ARES) has standardized on a 2-pin 8-amp (maybe 12 amp) DC connector sold by Radio Shack (made by Molex). At least, my understanding is that the ARRL has recommended that ARES do so.

The Radio Shack part number is 274-222. By ARRL / ARES convention, the pointed side of the nylon body is positive. You put the female pins in the male body and vice-versa. Use male bodies on power sources and female bodies on radios, since the pins in un-plugged female bodies could accidentally be shorted together. (humor shields, UP!)

The current RS catalog lists them as having 12 amps capacity, but I believe older catalogs said 8 amps, so evidently they now consider a higher operating temperature to be acceptable.

Advantages:
*readily available
*only 99 cents/pair
*easy to solder
*polarity protected if wired correctly
*standard supported by a major organization
*can be either panel mounted or end of wire
*similar (non-interchangable) connector for 20 amps available (RS 274-151,154)

Disadvantages:
*connectors do not lock together
*only 8 or 12 amps capacity
*require soldering
*special tool required to extract pins from body if you ever needed to
*rectangular hole required for panel mounting
*non hermaphroditic

Observation - Some people get surprisingly upset over the question of standard connectors.

Final words of wisdom - "I believe in standards. That's why I have one of every one of them."

Several of the local guys use a device called the "Super Slide" This
comes a two pieces. one on which the radio mounts, and one which mounts
to the car. It has a quick release mechanism that makes and breaks power,
external speaker, and antenna connections automatically. You can mount
one in your car and one in the house. They are available from major ham
radio chains (HRO, AES etc...).

A ham buddy of mine told me that if operating on simplex as
long as you are transmitting under 1W that anyone, licensed or not,
can talk on these frequencies and even if you are licensed, do not
have to identify.

Does anybody know if this is true and what is the rule?

: >aa9ch
: >

Uh, no. This is different. The Doppler DF acts as an antenna which
is located on the outer edge of a rotating wheel. During half the
rotation the antenna APPROACHES the source and during the other half
it RECEDES from the source, and this is what creates the Doppler
effect. In our discussion, the antenna is located at the axis
of the "wheel" and its distance does not change over time, just
the direction at which it is pointing.

Message-ID: <john.736098564@misty>
Source record: 282393

kagoos@msuvx2.memst.edu writes:

]I will be leaving for a week long road trip thursday. I will be leaving
]Memphis, TN and going on I-40 all the way to LA. Does anybody know of any
]linked/wide area repeaters enroute. I will have 2m and 440 capabilities.

]I know there exsists linked systems like the ZIA Connection etc. If anybody
]has any info I would like to hear it.

In Arizona, you can work the Northlink System. We have repeaters reachable
from I-40 as follows:
Navajo Mtn: 449.375, 146.96 (Just north of AZ Border) - I think
you can hit it from some places on I-40 in eastern
AZ
Flagstaff (Mt. Elden) 442.125, 147.08 (From Winslow to Williams)
Grand Canyon Village 442.075, 147.32 - I don't know if you can
hit it from I-40, but if you are going to the
Grand Canyon, it is located about 200 yds from
the rim of the canyon about 1/2 mi west of Grand
Canyon village.

440 repeaters take 100 Hz PL. Two meter repeaters MAY require 162.2 HZ
PL. However, the system is an OPEN system - feel free to us it. Other
repeaters not accessible from I-40 cover much of Central Arizona and
Southwestern Arizona.
The 440 repeaters are normally on link. 2 Meter repeaters need to be
commanded on link (public codes, but you'll need to ask the locals).

1645. Re: What is circular polarization?

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-29 15:51:34 UTC
From: jwj@dde.dk
Message-ID: <1993Apr29.155134.22869@dde.dk>
Source record: 282517

hello Chris

cvm@nauvax.ucc.nau.edu (Chris Michels) writes:

>I understand horizontal and vertical porlarization of an antenna or RF
>signal. I am just getting interested in satellites and don't understand
>circular polarization.

Imagine that the antenna is shaped like a corkscrew. A spiral of wire with size
comparable to the wavelength of the signal you want it to emit.
This type of antenna is called a Helix antenna and it generates a signal which
is circularly polarized. You can imagine that the propagation of the signal is
a continuation of the spiral which the antenna started.

> What is circular polarization, and right or
>left circular polarization?

Just like screws, helix antennas can turn either of two ways. Left or Right,
couter clockwise and clockwise. The signal of the helix which turns left
is called left cirularly polarized, and likewise the right turning one
generates a signal which is right circularly polarized.

Just like vertical and horisontal polarization, there is a very good isolation
between signals on the same freequency with left and right polarization. This
means that you can use the same frequency with both left and righ polarization
on the same satelite at the same time with good signal separation. (this is
also possible with horisontal and vertical polarization).

If a helix antenna has dimentions that are much smaller than the signal-
wavelength, the helix is operating in normal mode and generates a vertically
polarized signal (when held vertical).
That means that the signal does not travel in the direction of the spiral,
it travels along the normal (90 degrees) from the spiral direction.
This version of the helix antenna is used for shorter antennas for portable
radios, you may know the short flexible rubber antennas used with portables.

You get a good impedance match and a pretty good signal from the normal mode
helix, at least compared to the size of the antenna.
A 1/4 wavelength antenna will always give a better signal than the normal mode
helix does, but may be unpractical due to the size.

I hope this actually helped you understand circular polarization. I am not to
sure the meaning came out all that well :-)

>
>Perhaps it is a mistake to standardize on a 2 pin Jones. Would a 4 pin Jones
>(where I use 2 pins for positive and 2 for negative) be better? Are there
>more appropriate connectors to use?

A long time ago, hams here around Tallahassee standardized on the
2-pin Jones connector for 12v connections. Aside from the ease with
which these things can be pulled apart, they work pretty well. I
have seen them used on a 130W FM amplifier, without appreciable
heating. The big limiting factor is that you can't easily stuff
big wire into the connector shell (#12 is about the limit). For
low-power stuff (<50W) they're fine.

The most important thing, though, is to get together with the other
hams in your area and standardize on something that you will all use.
It's a great boon to be able to power up your gear in someone else's
car or shack in 5 seconds. If your pals are using the Molex 2-pin,
or Jones plugs, or some oddball thing, use it too, or at least
make some adapters so you're ready.

> Go for it!

Before you "go for it" please consider:

This amounts to using political influence to circumvent the process that the agency uses in enforcing rules. Before doing this, please consider the idea of due process as applied to the operation of gov't agencies with enforcement power.

It may be that what appears to you to be "inaction" is the result of a determination that no actionable violation of the code of Federal Regulations (part 97) exists. You may disagree, or want the conduct of which you complain to be a violation, but the agency involved is charged with making the decision according to its procedures and existing rules.

Using _political influence_ to change the agency's decision _in an individual case_ would deprive your intended victim of "due process." I don't mean to suggest that the tactic would be ineffective - it would probably work as congresscritters are notoriously unconcerned with legal niceties. I do think that it should not be used in the form suggested.

You should first be sure to exhaust all the agency administrative complaint and appeal procedures. Ask directly what these are when you ask for information about the status of your complaint. After these are exhausted you should then turn to the courts for relief.

If you elect to pursue political action, it would seem more proper to work to get the law or the code changed so that it could be applied uniformly to achieve the result you want rather than "targeting" an individual.

I'm somewhat sensitive to this because of a now long past incident in which a person with political influence (he _was_ a congresscritter {state}) was able to keep the FCC coming back again and again looking for some violation (any violation) so they could shut down a ham to "fix" a TVI complaint.

It seems that using political influence is a blade that cuts both ways. We may all be better off with due process rather than contests to see who has the most "influence" - especially since hams are a _small_ minority and it is minority rights that suffer most when due process goes out the window.

I agree, and without commenting on wether this choice is good/bad, etc.
it would be great (IMHO) if the manufacturers then used the "standard"
connector on their equipment instead of having a different one used by
each manufacturer.

The rules vary by frequency, and I don't recall that any of them are
related to mode (AM/FM/simplex/duplex,etc.)

The power limitation you mentioned is true for the "lofer" band, but
there are OTHER rules you did not mention (e.g., maximum length of
antenna must be less than 50 feet; which is roughly equivalent to
one INCH on ten meters!). I don't remember the band limits exactly,
but about 175-190 KHz tickles my memory.

In the "cb" and "broadcast" (both AM and FM) bands, I recall the
power limitation is 100 MILLIwatts (one-tenth of a watt); there may
be other rules, too, but I'm NOT a lawyer, so....

In practice the laws of nature will help out here (for a change). If you draw more current from one transformer, its temperature will rise which will increase the resistance of the windings which will cause it to drop more volts. The net effect is that some of the load will transfer to the other transformer. Of course, you might not get enough of the effect to help.....

1656. DSP Noise Filter

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-29 18:30:19 UTC
From: RICK_A._MARTIN.OKLAHOMA_CITY@xerox.COM
Message-ID: <"29-Apr-93.13:30:19.CDT".*.RICK_A._MARTIN.OKLAHOMA_CITY@Xerox.com>
Source record: 282520

Does anyone have any first hand information about the DSP Noise Filter made by Timewave Tech? For the price ($149) it looks like something I could use. I have a TS-820 without the CW filter. With the cost of filters being what they are, the DSP looks like a viable alternative. I am also interested in cutting down on the heterodynes caused by the tuner-uppers on SSB.

I would prefer to buy after being able to evaluate the performance, but that is not feasible in this case. Any reports would be appreciated.

1657. Yaesu FT-5100 CAT/Remote Control Mike Interface

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-29 18:32:33 UTC
From: byon@lynx.cecs.csulb.edu
Message-ID: <C69CuA.Cr@csulb.edu>
Source record: 282519

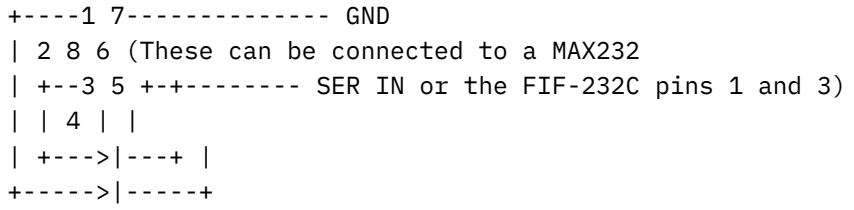
I own a FT-5100 and became interested in the Remote Control Mike, not for its wirelessness, but because it can control most of the radio's features via a serial data stream through the mircophone jack. Although I do not own the wireless mike, I was able to build an interface between my PC and my 5100. It is somewhat similar to the CAT interface I have built for my FT-757 HF rig, but mostly like the interface described in the FT-912R manual (loaned to me via a friend from Yaesu). I have recently been working on a micro-controller based radio controller which I use for transmitter hunts, and other ham related activities, and I plan to allow it to control my 5100 soon, but so far I have only controlled the radio from my PC. When using my PC as the source for the serial data, I used a MAX232 chip for a level conversion between the +/- 12 volts levels on the computer and the 0-5 volt levels on the radio.

The serial data paramaters are 4800 N82. The commands sent to the radio are simple one byte instructions. The RMC mode ON command (16) must be sent before any other command. When the RMC mode is ON, a small LCD "RMC" icon will light on the display (see owners manual under Display). Also, the Vol, Sql, and Bal knobs are disabled when in the RMC mode because they will be controlled via serial commands, but all other buttons are still active.

The commands are as follows:

0 - RPT 12 - CALL 24 - SQL Up
2 - REV 14 - BAND 26 - VOL Up
4 - MHZ 16 - RMC 28 - BAL Right
6 - D/MR 18 - SUB 30 - BAL Left
8 - TONE 20 - PAGE 32 - SQL Down
10 - LOW 22 - F/W 33 - VOL Down

The interface I built simply wired mike port pin 7 to serial ground and pins 1 and 3 each through a diode then together, to the serial source. Note: I am not a hardware person! Use this hardware at your own risk.



You can wire 1 and 3 together first, then through 1 diode, but that disables the UP and DOWN buttons.

I will continue to study this more. If anyone would like to know
more, or has any corrections or feedback, please email me.

I have been buying cabinets from a company called
Project Pro of Twinsburg, OH.

They seem to have gone bankrupt - phones disconnected.
They used to advertise in some of the ham magazines but
understand that in at least one case they have left an
unpaid bill.

Question. Does anyone know if someone else has taken over
the company? Has a liquidator purchased the inventory?
Any leads appreciated.

The outbacker is just fine as a mobile antenna, but I'd not recommend
it for base use. The isoloop would be better (though I don't have
one). If you have vertical space, I'd recommend an R7. I've got one
and it certainly works much better than the outbacker in my car.
The outbacker really gets crappy on 40 and 80 as you'd expect.
Works great on 20. My mobile rig doesn't do the warc bands so I
don't know about those.

>

In the field of air navigation this is refered to as space modulation.
It is used in both VOR (Vhf Omni Range) and TACAN (TACtical Air
Navigation). The VOR Stations use a system of combining to sideband
signals with a carrier, The phasing of these signal is changed to give
the allusion that the antenna is rotating without physically rotating the
antenna. As I recall (It been about ten years since I worked on these things)
The Pattern is rotated at a 60 Hz rate and appears to an aircraft to be an
AM signal modulated with a 60 Hz tone. Then the carrier is modulated with a
9960Hz tone that is FM'ed at a 60 Hz rate. When the Aircraft recieve the
signal it demodulates both and the phase relationship of the two signals
indiocates where the aircraft is in relation to the station. TACAN works basicly
the same but the antenna is actually rotated and the space modulation has more
than one tone on it.

: > : >: sidebands spaced 1 KHz away from the carrier since he now only sees
: > : >: a carrier that "bursts" at a 1KHz rate?
: > : >
: > : >Yes

: No, what he sees is (assuming antenna is far away, i.e. a point source) just
: a steady signal. It is not really "modulated". Imagine what a simple
: diode detector receiver would get --- DC, a steady signal.!!

<Flame on:>
It's a shame that people don't check their facts with a more-knowledgable
colleague before they confidently assert them on the net.
<Flame off>

If the signal is varying in amplitude, then it is modulated. It doesn't
matter whether the amplitude variation is caused by an AM modulator,
a rotating antenna, or any other means -- sidebands will be generated.
It is impossible to vary the amplitude (or frequency aor phase) without
generating sidebands.

: > : >: Remember, we are still only
: > : >: generating a single, unmodulated carrier. Are the "sidebands" a
: > : >: figment of the receiver?

: There are no sidebands -- see below.

Wrong

: > : >No, they are really there. It doesn't matter how you modulate the
: > : >carrier,

: Yes, it does matter. For sidebands to exist, one must non-linearly modulate
: a carrier.

Wrong

: But you don't really have "modulation". All you have is the _addition_ of
: a signal (1KHz) to another (carrier) by physical means (again assuming point
: sources and no near-field effects of phase or frequency change) rather than

: electrical means.

It is not addition, but multiplication. The rotating antenna changes the amplitude of the received signal. (When the antenna is is pointed at the receiver, the signal is strong; when the antenna is pointed away, the signal is weak.)

: > As far as who sees these sidebands, let me modify the scenario. Say
: > you now have an airborne receiver that circles the transmitting
: > antenna in sync with the beam. Does the flying receiver see these
: > sidebands (assuming the receiver sees no change in amplitude during
: > the trip around)?

: Again, there are no sidebands. Same scenario.

Wrong. The flying receiver would see sidebands at the frequency of its revolution rate. (A VERY fast airplane!)

: An therein lies the answer. What intelligence is really communicated by
: switched on/off carrier (or a varying carrier as in your example)?
: The answer is NONE... unless an additional signal is introduced (BFO)
: to recreate the intelligence.

Of course information is communicated by switching on/off a carrier. We've been sending Morse code by radio for 70+ years.

: ... intelligence REQUIRES bandwidth ... the more intelligence
: (higher baud rate, wide frequency transmission, color TV) the wider the
: bandwidth. Zero bandwidth = zero intelligence;

Correct

: in other words you may be
: changing what someone "sees" by rotating your antenna, but you didn't
: pass along any useful info.

Sure you do. You are communicating the rotation rate and phase of the transmitting antenna. You could use these parameters to communicate data if you wanted to.

: which is better, before or after the bridge rectifier (obviously,
: if after, then I will need 2 bridges). Also, how much difference
: will a volt or 2 in the secondary make? I do have access to the
: windings so adjustments are possible.

If you wire them directly in parallel, the one with the slightly higher voltage will supply most of the load current. Worse than that, during the non-charging portion of the 60 Hz sine-wave cycle, it will actually drive current in the wrong direction through the lower-voltage winding.

Using a separate rectifier bridge for each transformer will prevent reverse current. To force equal currents through each transformer, add a small-value resistor in series with the higher-voltage winding. Adjust the value for equal currents (or desired current ratio) from the two windings under max load condition. This adjustment might be easier if you put resistors in series with BOTH windings.

By the way, the output voltage drop caused by the resistors will be greater than average load current times R, because the current into the filter caps flows in short high-current pulses at peaks of the 60 Hz sine wave. In other words, don't make the resistance too large.

GC Electronics makes a small mount that I find very suitable for a
VHF mobile unit. It is about 4" square by 1/2" thick. It has six
electrical contacts that I use for power (2 per polarity) and speaker.
There is no connector for the antenna but I just use the PL-259/239 connector.
Removal requires unscrewing the antenna connector and simply pulling the
rig forward.

This makes it very easy to move my one mobile rig between two cars.
The fixed portion is quite thin. I attach this to the underside of
the dashboard in my cars.

I can bring in the GC part number info on this mount.

I envision making an adapter for my HT so it can be semi-permanently
attached to a slide mount. This would allow easy installation in each
of the cars as well. [Purists please disregard I said this].

>

Well, may be I need to be more explicit. When the receiving antenna in the Doppler unit is electronically rotated it imposes a 1Kc FM on the incoming signal (i.e. it seems, for all intents and purposes, including sidebands) to be like a FM signal with 1KHz modulating frequency. Where did these sidebands come from??? It is these 'anomalous' side bands that I was referring to in my example.

Or consider a bystander watching a train go by blowing its whistle. If he were to monitor the whistle on a spectrum analyzer, he would see a peak slowly move and some sidebands that are a result of the receiving process. These sidebands would result from appearance and dissapearance of the signal and their offset would depend on the speed of the train and the s/n ratio of the spectrum analyzer. But if this spectrum analyzer were on board the train, you would not see the effect. Is this effect a figment of the receiver???

Best Regards
Rajiv

1671. Beware Tatsuya Kawasaki

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-29 20:32:17 UTC
From: tewheele@iastate.edu
Message-ID: <tewheele.736115537@vincent2.iastate.edu>
Source record: 282431

Be careful before you sell anything to tatsuya@zapotec.math.byu.edu.

More than a month ago I negotiated the sale of my Icom 2SAT to him. I shipped the unit to him 30 days ago today. Today I got a letter from hi wanting $20 because he had to have some repair done on the rig.

First, there was nothing wrong with that radio when I sold it to him. That was possibly the best used HT sold by any ham to another barring unopened units. I had owned the radio for almost 2 years without a problem. Suddenly, after I sell it, it has some mysterious "tx/rx problem" that I "must have known about."

Actually, no, it never had a problem when I owned it. The only reason I sold it was because I bought a new Yaesu FT-530.

To top it all off, a friend of mine here at Iowa State sold this same guy an Icom 02AT about a year ago. Amazingly, Mr. Tatsuya Kawasaki also complained to my friend about some problem the 02AT had, and demanded $20 back. I don't know if this is his idea of negotiating his best price, but I think something stinks here...

Anyway, my point is... Beware if you are conducting negotiations with Mr. Kawasaki, because he may suddenly complain to you about some problem your equipment had, and demand cash.

Luckily, my friend here warned me when he heard the name of the guy I was selling my radio to, and I sold the radio by cash-only COD. My friend got stuck because Mr. Kawasaki refused to let his check clear (i.e. not enough cash in the account) until my friend sent him $20 back.

Just a friendly warning...

If anyone else has had problems like this, let me know!
Thanks!

>hold of the unit and pull. A neat feature would be a similar "back plane"
>in my condo that I could then slide it into when I get home! Any one
>make such a rig?

When I got my Standard 2m radio about ten years ago, I looked around and found something like that. I got mine from Radio Shack, and it's made for CB radios. It has six connectors, including the antenna connection. That's enough for power, RF, and audio (if you want to reroute the audio).

I bought one bracket for the car, and mounted another one on top of a 12-volt power supply that I built. I just slide the radio out of the car and slide it into the bracket mounted on the power supply when I get inside.

The antenna connection also goes through the same copper finger connectors that power and audio go through, so it's not constant impedance. If you are going to use this at 70cm, you should probably just use the antenna connection on the radio and not go through the bracket.

>..-. ..- -.-. -.- --- ..-. ..-.

Ohhhh, Tony... you're so witty.

I have an Extra class license, too. I have yet to hear a rational argument in favor of keeping the current CW requirements. I've heard a lot of huffing, puffing and emotional rambling, but I have yet to hear why knowing 20WPM makes an Extra more valuable to the US Amateur Service.

Obviously, knowing 20WPM CW hasn't kept you from being a foul-mouthed blow-hard.

I've followed this thread up on rec.radio.amateur.policy. Please, if making any further followups to this inane and pointless thread, use rec.radio.amateur.policy.

Give your local National Weather Service a call or contact a local ham club. Chances are you may have missed the official training this year as they are usually held in the early spring.

1675. Rehabbing an ICOM W2A HT

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-29 21:13:49 UTC
From: rdewan@casbah.acns.nwu.edu

Source record: 282444

Rehabbing an ICOM W2A
=====================

by AA9CH

Summary: A description of process to replace the front panel
(including clear LCD cover) and keyboard of an ICOM W2A HT.

Disclaimer: This requires a steady hand and the willingness to disassemble
an HT into a mess of small parts. If you are unsure then do not attempt
it or you will be mailing ICOM Repair a bag of parts. :(

So here it goes. I used an ICOM W2A for a good part of a year for packet
and as a hip and mobile station. As I did not use a protective cover,
the HT was a mess of scratches etc. Some keyboard letters had completely
worn off. When the power connector got loose intermittent, I decided to
do something. I called ICOM and they wanted a minimum of $65 of labor +
parts + shipping. Hah!

I ordered a new front panel. It is a wrap around piece that includes a
magnifying clear part for the display. It cost $13.88 and shipping.
ICOM threw in a free keyboard and a rain cap (the small plugs that fit
into the power and other connector holes when they are not in use.)

I spread a soft lint free cloth to work on so that the screws would not
roll off and I would have a soft surface to set the HT on. Case
disassembly instructions are in the manual. Do not forget the small
screws on the side of the HT that has the PTT button.

Remove the leaf spring for the battery latch and set it aside. It appears
like and additional contact on the bottom of the HT.

Pull off the tone board.

The UHF and VHF radio sections are in small sealed mettalic boxes.
The two boxes are connected by two screws. One at the bottom end
of the HT and one near the PTT button. Take these off.

The radio boxes are connected through miniature multi-pin connectors
to a PC board on the top of the HT. Pull them, very gently, up and out.
Do it one at a time. Set them aside.

Now examine the flexible PC board on lying along the bottom of the
cavity in the HT. It has the CPU, spkr, mic, lithium battery and other
stuff. It is held to the front case by 6 screws. All but one of them have
metal tongues to establish ground contact. You can figure
out the placement of the screws by comparing the cavity and the
replacement front. Take these screws off and set aside.

The front will now separate from the rest of the HT. The flexible board will remain attached to the top of the HT. Now comes a critical part. The flexible board makes contact with an inflexible board that supports the keyboard through a small pink and black foam like pad. It is about 1/8" square and an inch long. Take note of it and its position and set it aside.

Now remove the screws holding the inflexible pc board to the front case. Remove the board and the metal shield (very delicate - be gentle.) Remove the small translucent silicone piece that conducts the light from the surface mounted T/R LED to the front case.

Install the light conductor for the T/R LED into the new case and put in the new keyboard.

Reinstall rest of the parts in the last out - first in manner. Do not forget to carefully place the pink and black foam connector between the inflexible and flexible pc boards.

A last hint. Take particular care with the case screws. These are self tapping and it is easy to destroy their heads.

Have fun.

> a mathimatical explaination of how phase angles are calculated?

Actually, the easiest way to understand the phase angles is by the engineering
method (my terminology). The total impedance of the load is Xt=R+iwL-i/(wC)
which is nicely represented represented on a graph by using the real part (R)
on the x axis and the imaginary part (wL-1/(wC)) on the y axis (by the way,
w=2*Pi*frequency). If we do this then the phase angle can be found real easy
(and visualized easily) by just plotting the x and y values to find the
endpoint of the impedance vector. You then find that the tangent of the
phase angle is given by (wL-1/(wC))/R - inductive load gives a positive
phase angle, capacitive load gives negative, resistive gives angles near 0.
(I hope I got all the signs right here - I know I'll get flamed if I didn't).

1677. STS-55 Element Set GSFC-010

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-29 21:39:16 UTC
From: ABFHB@STDVAX.GSFC.NASA.GOV
Message-ID: <930429173916.27e00599@STDVAX.GSFC.NASA.GOV>
Source record: 282443

SB SAREX @ AMSAT $STS-55.011
STS-55 Element Set GSFC-010

The following represents the latest Kepelerian element set for the STS-55 space shuttle mission as generated by Ron Parise, WA4SIR, at the Goddard Space Flight Center. Gil Carman, WA5NOM reports that the Reaction Control System (RCS) burn performed this morning lowered the perigee altitude by more than a mile. This will cause the predicted orbit to be 36 seconds late from the actual orbit by the time the SAREX A/B antenna test is performed tommorrow on orbit 61 and 62.

SAREX listeners in the southeast portion of the U.S. are encouraged to participate in the SAREX antenna test by noting the times of Acquisition of Signal, Loss of Signal, and the time and amplitude of the maximum S-meter reading on your radio for each orbit. On orbit 61 the shuttle crew will use the SAREX window mounted antenna. On orbit 62 they will use the SAFEX externally mounted antenna. All downlink will be conducted on 145.55 MHz. Please make sure your watch is synchronized with WWV or any other calibrated time source. See February 1993 QST, page 42 for more details.

STS-55 Element Set GSFC-010

STS-55
1 22640U 93 27 A 93119.55437440 0.00044139 00000-0 12681-3 0 106

Satellite: STS-55
Catalog number: 22640
Epoch time: 93119.55437440 (29 APR 93 13:18:17.95 UTC)
Element set: GSFC-010
Inclination: 28.4609 deg
RA of node: 247.0889 deg Space Shuttle Flight STS-55
Eccentricity: 0.0010670 Keplerian Elements
Arg of perigee: 278.6023 deg
Mean anomaly: 81.3380 deg
Mean motion: 15.91492930 rev/day Semi-major Axis: 6676.2366 Km
Decay rate: 0.44E-03 rev/day*2 Apogee Alt: 304.97 Km
Epoch rev: 48 Perigee Alt: 290.73 Km

NOTE - This element set is based on NORAD element set # 010.
The spacecraft has been propagated to the next ascending
node, and the orbit number has been adjusted to bring it
into agreement with the NASA numbering convention.

Submitted by Frank H. Bauer, KA3HDO for the SAREX Working Group

CONFIDENCE LEVEL: 65%

NOTES:
Predicted geomagnetic activity is based heavily on recurrent
phenomena. Transient energetic solar events cannot be predicted reliably over
periods in excess of several days. Hence, there may be some deviations from
the predictions due to the unpredictable transient solar component.

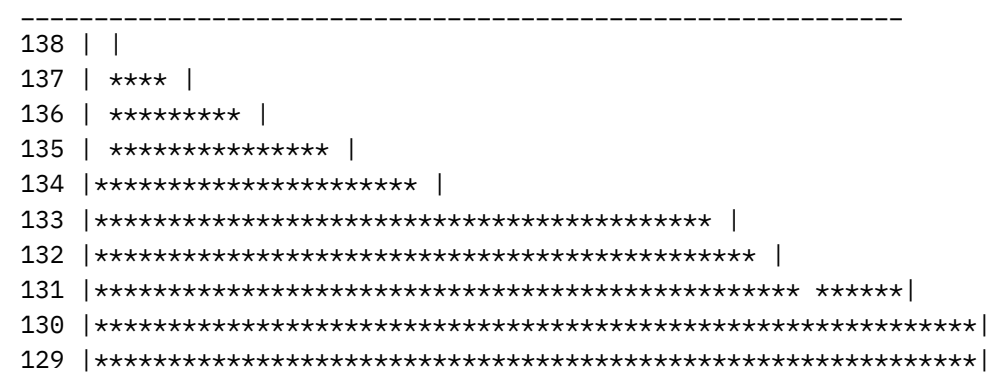
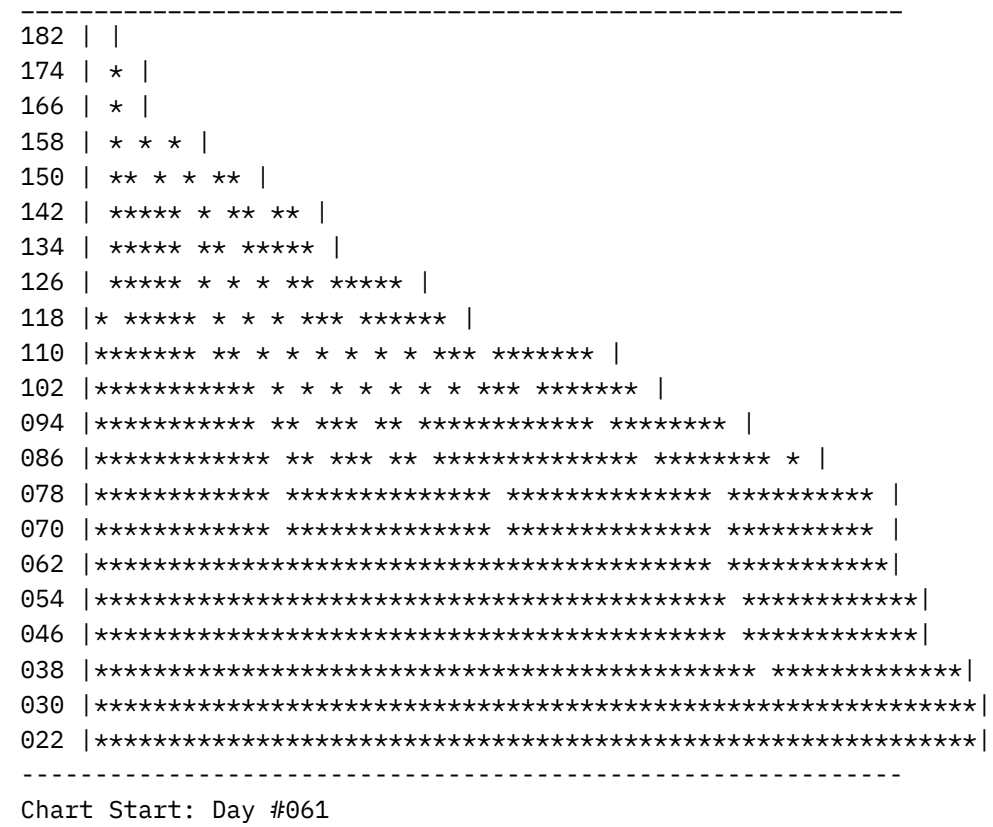
GRAPHICAL ANALYSIS OF 90-DAY AVERAGE SOLAR FLUX
-----------------------------------------------
```



NOTES:
The 10.7 cm solar radio flux is plotted from data reported by the Penticton Radio Observatory (formerly the ARO from Ottawa). High solar flux levels denote higher levels of activity and a greater number of sunspot groups on the Sun. The 90-day mean solar flux graph is charted from the 90-day mean of the 10.7 cm solar radio flux.

CUMULATIVE GRAPHICAL CHART OF SUNSPOT NUMBERS



NOTES:
The graphical chart of sunspot numbers is created from the

daily sunspot number counts as reported by the SESC.

Actually there's more than a minority. It's just that all this
politically correct bullshit keeps some people from saying whats really
on their minds. :)

I have no problem if all someone wants to do is work VHF/UHF, but just
do two things and I won't get upset:

a) good operating proceudre

and

b) don't whine for things.

> Bottom line - my apologies to any Techs who've been put on

No, we're the ones behind you in the lefthand lane when you're doing
45MPH and flashing our beams like crazy. :)

It's not the code that instills goog operating practices, but the
personality required and the comitment to pass through the code-gate. It's
no different than any of a number of silly requirements that have
side-benefits --- for instance Bachelor's Degrees they really don't mean
much other than
a person has enough conviction and ability to endure the system and that
means
something just as the ability and comitment to learn code says something
about
to person willing to do it.

KAC

Opinions? Can anyone actually _have_ opinions, or are they no more
than dust motes floating in the sunlight of collective intellect.

From: tkelso@afit.af.mil
Message-ID: <1993Apr29.222750.28769@afit.af.mil>
Source record: 282442

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (513) 427-0674, and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

>"Energy is stored in the magnetic field of an inductor when current
>increases through it..."
>
>Energy = K * I' ?
>
>What symbol is used for energy? Does the constant K relate to the inductance?
>What other factors would it relate to?

Ok ... The energy that produces magnetic fields is contained in the
movement of electrons through a coil (the current). The
magnetomotive force, or simply "mmf", is the force that produces
that magnetic *flux* within a coil. The flux is the density of the
magnetic field.

The magnetomotive force can be calculated by multiplying the
number of turns of conductor by the current flowing through it. IE:

mmf = current * turns

mmf is usualy measured in weird little units called *gilberts*
where:

1 Gb = 0.796 * (current in amps) * turns

At the ends of any given coil the magnetic field intensity drops
off as it spreads. Within the coil the flux is generaly extremely
uniform. A practicle unit used for measuring this is to measure
the mmf for a given unit of coil length. The general unit used
here is an *oested* or *Oe* where:

1 Oe = 1 Gb/cm

If we wind a coil and let it sit on our kitchen table the air
filled space inside the coil will allow a particular magnetic flux
density to build up. If we slide a piece of iron inside the coil
we find that the magnetic flux density increases. With the iron
core the magnetic field has an affinity for the iron which almost
"pulls" it away from the conductor.

If we were to compair the ability of one material to accept
magnetic energy to another a logical place to start would be good
old fassion air. A quick example would be a magnetizing force *H*
of say 50 Amps * turns/in. This would produce a magnetic flux *B*
of 50 units/in^2 in the air core. In a good ole fassion iron core
the same flux density might be perhaps 500,000 units/in^2!!!

The ratio of B to H or B/H is called permiability *u* (that's a mu
if I could type it).

I don't know if that makes it any easier or not but that's as much
as I can do tonight without blowing a fuse or something. If your
interested and I'm doing a fairly good job tell me and I'll be
happy to write something quickly about capacitance.

BTW I'm paraphrasing some of this from "Electronic Communication"
by Robert L. Shrader. [Macmillan/McGraw-Hill] spicing it up
where needed. If you want to check it out of the local college
library it does a fairly good job. I'd give you the stuff out of
my higher level physics books but that stuff still confuses me too!

Later Gator!

1685. FT-530 out of band TX..

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-30 00:05:55 UTC
From: jga@dreaml.wariat.org
Message-ID: <k5Ls3B1w165w@dreaml.wariat.org>
Source record: 282454

Well, a friend of mine and I were testing the TX range of a Yaesu FT-530, once it was modded on one of his commercial repeaters.. (he's a tech for a local commercial radio business) Anyhow, we discovered that it unlocks as far as TX is concerned at about 459 MHz on UHF. Is there a seccond mod for this, or is this just the way it is? (I suspect it's the way it is.)

Thanks, and 73!

1686. .85 AH Radio Shack Nicads

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-30 01:57:06 UTC
From: ignacij@meishan.animal.uiuc.edu
Message-ID: <ignacij.736135026@meishan.animal.uiuc.edu>
Source record: 282457

Lately Radio Shack began selling .85 AH Nicads at $5.95 a pair.
Previously they carried only .6 AH nicads at $4.50 a pair. The new
nicads carry a warning that they may discharge in 60 days. Since
the increase of capacity from .6 to .85AH is substantial, I wonder
if they are made by a distinctly different technology. Perhaps they are
not nicads at all. Perhaps they are NiMH batteries. I use them in my HT
and they seem to last real long.

K0ZL ==> MODS@USBBS
"DR-1200 INTERMOD REDUCED"

ALINCO DR-1200 INTERMOD REDUCTION

CAUTION: THE FOLLOWING PROCEDURE INVOLVES DESOLDERING SMD (SURFACE MOUNT DEVICES). IF YOU ARE NOT QUALIFIED TO WORK ON SMD DEVICES OR DO NOT HAVE THE PROPER EQUIPMENT, DO NOT ATTEMPT THIS MOD! SEEK PROFESSIONAL TECHNICAL ASSISTANCE. THE ORIGINATOR OF THIS MODIFICATION IS NOT RESPONSIBLE FOR ANY LOSS INVOLVING THE PERFORMANCE OF THIS MODIFICATION.

CAUTION: THIS RADIO EMPLOYS STATIC SENSITIVE DEVICES. SUITABLE MEANS SHOULD BE EMPLOYED TO ASSURE A STATIC-FREE ENVIRONMENT PRIOR TO BEGINNING WORK ON THIS RADIO.

1. REMOVE POWER AND ANTENNA FROM RIG
2. REMOVE BOTTOM COVER
3. LOCATE C-19, LEFT SIDE FRONT OF BOARD (CLEARLY LABELED, NEAR Q3).
4. REMOVE C-19: SUCK UP THE SOLDER AND CAREFULLY PRY AWAY FROM BOARD WHILE STILL WARM.
5. SAVE THE CAPACITOR IN CASE YOU GOT THE WRONG PART!
6. REASSEMBLE THE RADIO, NO RETUNING NECESSARY.

This capacitor connects D1 (back to back diodes) to the first IF line. D1 is supposed to be a "limiter". Unknown why Alinco chose to put in such a limiter, as the integrated IF chip IC-1, an MC3357, has a built-in limiter. Also, the Kenwood TM-231 which uses nearly the same layout and circuit, doesn't have such a ciruit.

While the intermod hasn't gone away entirely (I'm not done with it yet!), it has diminished enough to make the rig usable on packet AND voice now.

From: kd1hz@anomaly.sbs.com
Message-ID: <1993Apr30.020548.6140@anomaly.sbs.com>
Source record: 282449

With all the discussion about getting the FCC and ARRL to take action against jammers, has anyone ever considered hitting jammers where it hurts most yourself - in their pocket book?

For instance, what would it take to sue someone who you can "prove" was jamming the repeater? What "evidence" would be necessary to "prove" your case in a civil court (since it is a preponderence of evidence and not beyond-a-reasonable-doubt)?

Has it been done? Anyone have any case law?

Not true. `Tis likely you'd never be caught, but, that wasn't what you
asked.

The FCC does allocate a few frequencies to be used for restricted radiation
devices ... none of them are in the ham bands.

From: k23690@lehtori.cc.tut.fi
Message-ID: <1rqghd$oik@cc.tut.fi>
Source record: 282453

alanb@sr.hp.com (Alan Bloom) writes:

> I bet you could transmit a 2-watt HT through the helical resonator.
> Of course, you might not want to bet $25 on it!

The Toko 2 m helical filters can handle 5 W, while the 70 cm types
only 0.5 W.

The insertion loss is 2.5 - 8 dB depending on filter type. If you put
(on 2 m) the helical filter directly in the antenna cable between your
HT and an external antenna, you can still radiate 1 W (assuming 2 W HT
and 3 dB insertion loss in the filter). The sensivity will drop by 3 dB,
but as the main propblem was intermod, this loss should be acceptable
particulary on 2 m when the external noise level is much higer.
An added benefit is that this filter reduces harmonics from the
transmitter.

If you are using an external power amplifier, you could put the filter
between the HT and the amplifier assuming the amplifier is sensitive
enough to deliver full output power at the reduced (1 W) input power.

If you are willing to do some modifications to an external power
amplifier with a built in pre-amplifier, the helical filter should
be inserted between the output of the pre-amplifier and the relay
that is delivering the received signal to the HT.

Assuming that the pre-amp has been designed properly (some input
selectivity and high stand-by current) this added filter should
remove most intermods from out-of-band (pagers etc.) signals.

However, if there are strong in-band signals (other close by hams
with high power), any pre-amplifiers in front of a HT will cause
severe intermods between these signals. If you install the filter
after the pre-amp, you should add an attenuator (3 resistors) between
the pre-amplifier and filter, so that the received signal at the HT
is only slightly larger than at the pre-amplifier input. If the
pre-amp gain is 20 dB, filter loss 8 dB and cable loss 3 dB between
the pre-amp and the HT, the attenuator should be 9 dB (=20-8-3).
If there are not many strong in-band signals, the attenuator could
be in the 4-9 dB range to prevent degrading the total noise figure
(sensivity) too much.

Civil law is quite different from criminal law. Beyond a reasonable doubt
is NOT required. There is not presumption of innocence and in many instances
the burden of proof is on the DEFENDANT. That is part of what discovery
periods are about in civil suits. If you refuse to prove you are innocent,
the judge in the civil case can award summary judgement for the plaintiff
without your ever having your day in court. The plaintiff will never have
to present one shred of evidence. I am NOT a lawyer so you should consult
one but as I understand this is one of the best forms of harassment in US
jurisprudence and frivolous lawsuits abound, almost without retribution, even
though technically their is redress for frivolous lawsuits. Seems like
something to consider if you have some evidence.

SB Space ARL ARLS025
ARLS025 SAREX update

NASA reports that STS-55 orbiter power is being conserved. This
will result in somewhat limited packet operations, although voice
operations will continue. Best advice for uplinking to Columbia
is to transmit on appropriate uplink frequencies once you hear
SAREX operations downlinked on 145.55.

Don't forget the SAREX and SAFEX antenna tests will occur on orbit
61 on April 30 at 0857 UTC and ORBIT 62 on April 30 at 1030 UTC.

ARLX005 VK1RH, SK

ARRL HQ regrets to report that Ron Henderson, VK1RH, President of
the Wireless Institute of Australia, became a silent key on April
26. An active amateur operator and adminstrative leader, Ron's
untimely death was the result of cancer. He attended the full term
of WARC-92 as a delegate from Australia and particpated in the 1985
conference in Melbourne. He was a strong supporter of amateur radio
and the ARRL. The ARRL and IARU express their deepest sympathy to
Ron Henderson's family, the WIA and to his many friends around the
world.

SB DX ARL ARLD021
ARLD021 DX news

Thanks to the YCCC PacketCluster Network and Pete, KB1HY, for the
items in this week's bulletin.

UGANDA. At the rate things are going, this one will probably move
out of the top ten most wanted countries list for Dxers. 5X1XX has
been very busy working 30 and 17 meter CW. 5X1A and 5X1B have been
handing out their fair share of Qs, too. For the data crowd, 5X1XT
is on 20 meter RTTY.

LOW BAND REPORT. Despite certainly not being in the prime time of
the year for DXing on 160 meters, some good pickings are around for
the patient. Northeastern amateurs have worked CE8ABF on both CW
and SSB. Listen between 1835 and 1840 kHz for this one. Other
goodies include SV8ZS on 1828 kHz and 0304z, ZP5JCY on 1832 kHz at
0237z, and EI5HJ on 1833 kHz at 0035z.

80 METER REPORT. The approach of Summer doesn't seem to have had
much affect yet on this band. New Englanders have worked ZL3ABV at1010z, JA1HQT at 0957z
and CX4GL at 0933 and 0346z with CW. SSB
catches include CP5NU at 0138z, VP2EY at 0240z, ZP5PT at 0131 and
0200z, PY5CC at 0134z, and PY2HC at 0100z.

40 METER REPORT. Operating sunset and sunrise times is productive
on this band. Recent finds include 5B0/DL6SDW at 2344z, ZL1ST at
1041z, and JH1GRG between 0900 and 1030z, all operating CW.

30 METERS continues to provide good DX all year long. Some of the
better finds have been VK6RO at 1103z, OY1CT at 0029z, ZK3RW at
0529z, 5X1XX at 0340z, 3B8FG at 0327z, 5X1XT at 0321z, and 7P8SR at
0205z.
```

20 METER REPORT. For CW buffs, listen for BV4JB on 14032 kHz at 1340z, VK5ML on 14043 kHz at 1011z, and VR6BB on 14025 kHz at 0626z. For SSBers, listen for VK8YL on 14226 kHz between 1130 and 1215z, 9M2MW on 14245 kHz at 1032z, AND VR6BX on 14260 at 0535z.

17 METER REPORT. This band offers T30JH on West Kiribati operating SSB on 18155 kHz around 0350z. Also look for 5X1XX around 18070 kHz between 2300 and 0100z.

15 METER REPORT. YB1ARW can be found on 21294 kHz SSB around 1400z. OD5/SP7LSE continues to be active from Lebanon. Check 21015 kHz CW around 1400z.

12 METER REPORT. PacketCluster spots are few and far between for this band. However, ZL2ANT was worked on 24900 kHz at 2315z, and ZK2XO on 24895 kHz at 2227z, both from the east coast. Not bad for a dead band.

10 METER REPORT. And if you think 10 meters is dead until the next sunspot peak, think again. Don't forget that a band that is wide open can sound dead if there is no one transmitting. The moral? When in doubt, call CQ. Here is a list of some DX worked during the past week.

C91S on 28480 kHz at 1345 and 1623z
VK2NO 28355/0101
VR6JJ 28490/0055
PZ1CZ 28446/1752
3X0HLU 28470/1431
ZS6MI 28440/1220
ZL3AZ 28455/0154
ZL2XO 28027/2055 and 2114

SATELLITE REPORT. Enthusiasts of orbiting artificial propagation mention working the Italian DXpedition to Liechtenstein; TA1D in Turkey; OY1CT on the Faroe Islands; UL7 and UY8.

THIS WEEKEND ON THE RADIO there is a little something for just about everyone. The DXYL/NAYL phone contest wraps up on the 29th. See March QST, page 110 for details. Saturday ushers in the 0600 local time start of the ARRL UHF Sprints on 902, 1296 and 2304 MHz. See March QST, page 110 for further information.

On Saturday and Sunday there is even more to choose from. To wit, the ARI International DX contest, MARAC County Hunters CW contest, Oregon QSO Party, Ten-Ten International Net Spring CW QSO Party, and the Texas QSO Party. Whew. The particulars for these events are on page 106 of April QST.

And if that wasn't enough, Sunday, May 2 will be a prime for EME contacts.
NNNN

1698. Re: .85 AH Radio Shack Nicads

>Lately Radio Shack began selling .85 AH Nicads at $5.95 a pair.
>Previously they carried only .6 AH nicads at $4.50 a pair. The new
>nicads carry a warning that they may discharge in 60 days. Since
>the increase of capacity from .6 to .85AH is substantial, I wonder
>if they are made by a distinctly different technology. Perhaps they are
>not nicads at all. Perhaps they are NiMH batteries. I use them in my HT
>and they seem to last real long.

My experiences with NiMH cells tells me that this cannot be true.
NiMH cells require differenmt charging circuits to get full capacity,
and these 850's are drop-in replacements for lower capacity nicads.

Shareware RTTY/FAX Decoding Programs for the IBM PC

Frequently Asked Questions

by Dave Moisan, N1KGH

Last Revised--30 April 1993

Many people have gotten interested in receiving RTTY and FAX transmissions with their PC's. Shareware, combined with cheap, easy-to-build hardware, has put RTTY and FAX reception in reach of anyone with a good digital portable such as the Radio Shack DX440 or Sony 2010.

Two programs have become very popular: Hamcom 2.1, a RTTY terminal program, and JVFAX 5.1, a full-featured FAX/SSTV receive program. The two programs both use an identical basic interface, so one can get started in FAX and RTTY for almost nothing. Another program, PKTMON, lets you monitor HF and VHF packet off the air, using the same hardware.

This FAQ list is divided into five sections:

Introduction
Using HamComm
Using JVFAX
Using PKTMON
General Problems

Appendix--HamComm Interface Schematic and Parts List

INTRODUCTION

** Where do I get the software?

HamComm and JVFAX are available from a number of sources on the Internet, including simtel20.army.mil and nic.funet.fi (/pub/ham/misc); look for HAMCOM21.ZIP and JVFAX51.ZIP. PKTMON 1.2 is available from nic.funet.fi and should be on Simtel as I post this.

** What are the basic system requirements?

HamComm: XT or better, 320K RAM, hard disk not required.

JVFAX: 286 or better, at least 1M RAM; a hard disk is strongly recommended. Note that JVFAX has its

own extended memory driver, which may conflict
with HIMEM.SYS and other memory drivers.

Pktmon: 286 or better.

** What are the basic receiver requirements?

I've successfully received RTTY, fax and Packet with my
Radio Shack DX400 digital portable, and have had less
luck with CW. Receivers like that will work, but table
top radios (Kenwood, Icom and Yaesu) and ham transceivers
are much more suited for this application.

** Where can I find plans for the basic interface?

The plans are included in the documentation for both Hamcom and
JVFAX. JVFAX has schematics for both the basic interface, and
a more sophisticated interface that also receives GOES/APT
satellite pictures.

A complete schematic and parts list is included at the end
of this FAQ list.

** I don't want to build it. Can I buy a interface?

Yes. William Nolle is selling his version of the interface,
called FAXCAP, and it includes all software discussed here.
Contact him at:

William Nolle
122 Phillips Rd
Hazel Green, AL 35750

(Disclaimer: I am not affliated with William, nor am I even
a customer, but merely a friend and fellow enthusiast.)

Also, Dieter Dippel is selling an interface (with surface-
mount components) which includes JVFAX and HamComm. Contact:

Dieter Dippel
Fenitzer Str. 33
D-8500 Nuernberg
Germany

** How does the interface work?

This is a zero-crossing detection circuit, made up of a 741
connected in an open-loop configuration. For every zero-
crossing (twice a cycle), an interrupt is generated.
HamComm measures the time between successive interrupts using
the PC timer chip.

** How do I connect it to my radio?

Simply run an audio cable from the interface box to the earphone/
headset output, record output, or data output of your radio. The
Sangean 803A has a record output, and the DX440 can be modified for
same. Note that the interface needs 100 mV of audio to work,
but most rigs can easily supply this.

** Can you transmit with the interface?

Depends on the software, and how you construct the interface.
Hamcomm will send through the speaker or TxD line of the serial
port; JVFAX sends through the speaker. Pktmon doesn't transmit
at all. See the appendix for details.

USING HAMCOMM

** How do I set up HamComm?

There's a sample configuration file in the HamComm archive, HC.CFG
which explains the numerous parameters required for the program
to run. Here are the ones you should set:

select port com<n> (Select default com port, <n=1 to 4>)

Note: COM1 and COM2 are already defined. If you need to
use COM3 or COM4, here are the "define port" statements
to use:

define port com3 iobase 0x3e8 irq 4
define port com4 iobase 0x2e8 irq 3

You don't need to do this for COM1 or COM2 unless you have
an unusal setup.

** Where can I find RTTY on HF and what does it sound like?

The ham bands are the best place to find decodable RTTY. I tune
into CFH, Halifax, Nova Scotia on 4271, 6496.5 and 10536 KHz.
RTTY is usually sent on the half-hour. RTTY has a "deedle-
deedle" sound that you're probably familiar with if you've
ever randomly tuned shortwave.

If you want to know what an RTTY signal sounds like, go
to the RTTY screen (F3) and try control-T (transmit on/off).
Type in some text and hit ENTER. You will hear a signal from
the PC speaker according to the currently selected speed,
shift and center frequency.

** How do I tune RTTY?

First, hit F9 for the tuning screen and, using the arrow keys, set
the center frequency to 1200 Hz. For example, if you're trying to
decode the ARRL bulletins on 3625 KHz, the tuning screen should
look like this:

Signal Frequency: 01### Hz

```
0 . . . .500 . . . .1000 . . . .1500 . . . .2000 . . . .2500 Hz
Space -> | | <- Mark
|
```

Center Frequency: 01200 Hz

Using the arrow keys, move the lower tuning bar between the two upper tuning bars. You may need to vary your BFO, RIT or clarifier so that the upper bars are centered on the display.

The difference between the two frequencies, or "distance" between the two upper bars is the *shift* of the RTTY signal. Hit Alt-K and select the appropriate shift--in this example, 170 Hz.

You'll know when the signal's tuned properly, because a train of square waves will appear at the bottom of the screen.

Next, hit Alt-S and select the *speed*; Ham RTTY is usually 45 baud. Outside of the ham bands, 50 and 75 bauds are most common

(Note: If you're mathematically adept, you can figure out the speed yourself. Hit F8 to select the Scope and freeze the display by hitting Return. Measure the time interval of the _shortest_ peak, and calculate Baud rate = 1/t*10**-3, where t is in milliseconds.)

Now, hit F3 (for Baudot), and readable text should scroll forth on the screen. If it doesn't, hit the Tab key to toggle between Normal and Inverted keying. If text is still unreadable, hit Alt-S and adjust the speed.

** How do I log RTTY to a file?

Hit Alt-F R or Alt-F W; select the directory or file you want to save to and hit Return. To stop logging, hit Alt-F R.

Here's some RTTY recorded off the air on 4271 Khz (at 0230 UTC):

```
avalon peninsula
east coast the bonavista peninsula only.
freezing rain warning continued for the bonavista peninsula only.
tonight..overcast. intermittent drizzle or freezing drizzle.
periods of freezing rainpm yrkwivonavista peninsula ending
overnight. winds becoming strong northerly. low zero.
friday..cloudy. patchy freezing g7+)-01vtov
```

** Whenever HamComm is receiving a string of numbers (like from CFH or other weather stations), it comes in garbled.

HamComm has a AutoLetter mode that automatically shifts from Figures to Letters after 5 characters have been received. Turn this off with Control-L; the "L" at the bottom right of the display should disappear. This feature is akin to the "Unshift On Space" option found on other decoders.

** I found RTTY, but Hamcom can't decode it.

A sad fact of life in the shortwave bands is that at least 3/4's
of all RTTY is encrypted, and alas, much of the unencrypted
traffic is not sent in plain Baudot. There still are many
decodable signals, but you'll need good references to find them.

** How do I decode CW?

Decoding CW is similar to decoding RTTY, except that there's only
one frequency to be concerned with. While you hear the CW,
go to the decoding screen, as below:

Signal Frequency: 01200 Hz

0 . . . .500 . . . .1000 . . . .1500 . . . .2000 . . . .2500 Hz
|
|

Center Frequency: 01200 Hz

Just move the arrows so that the lower line is lined up with the
upper and hit F2.

Here's a sample of CW copied off the air, on 4281 Khz

vvv vvv vvv cqde vcs vcs vys qsx 4 6 and 8 mhz chnl 3/4/7/8 vvv
vvv vxv cq de vcs vcs vcs qsx 4 6 and 8 mhz chnl 3/4/7/8 vvv vvv
vvv cq de vcs vcs vcs qsx 4 6 and 8 mh7 chnl 3/4/7/-.--.. vvv
vvv vvv cq de vcs vc5 vcs qsx ......- 6 und 8 mhz chnl 3/4/7/8

Note that HamComm subsitutes dot-dash marks for any character it
can't decode.

** I'm hearing CW, but Hamcom just garbles it.

There are two different problems encountered with CW decoding in
HamComm. Here's what Django, DL5YEC, author of HamComm has to say:

Problem 1: Tone detection

For many people it is obvious that an RTTY signal has two states,
usually called mark/space or high/low tone. ANY data
transmission requires at least two states for 1 bit at a time and
CW is no exception. So what are the two states for CW? They
are the tone and ... NOISE ! You may be surprised to hear that
a certain amount of noise is REQUIRED to detect that the tone
has ended.

HamComm has an indicator for the tone detector output. At the
bottom of the RX window, just to the right of the WPM display,
is a small white dot that jumps up and down: up = tone detected,
down = no tone (noise) detected. Listen to the signal and watch
the jumping dot. It should follow the signal precisely and not
jump around nervously or stick to one position.

The input signal is compared to the currently selected mark/space tones. To be regarded a valid tone the signal has to stay in that range for a certain amount of time. So the behaviour of the detector mainly depends on the currently selected SHIFT.

The tone detector output as displayed by the dot is the input to the character decoder.

Problem 2: Character decoding

In theory a dash is three times as long as a dot, the gaps within a character are dot-sized and the gaps between characters are dash-sized. In reality there are short and long tones and gaps of variable size because CW is usually 'hand-made.' The speed and length ratios also change during a transmission if the operator gets tired.

HamComm keeps a floating average of the tone duration to adjust to speed changes. Overall decoding quality mainly depends on the tone detector.

As an aside, I should mention that the bouncing-dot display also works great for RTTY; just tune the receiver until the dots bounce equally between top and bottom.

USING JVFAX

** How do I set up JVFAX?

Select "Configuration" from the menu, and you should see a Config screen. Options are set using the arrow keys to select, and the space bar, - or + to set each option. Here are the options you need to set:

Demodulator: Set to "7 bits" and "Comparator/IRQ 4" or "Comparator/IRQ 3". Specify the address according to the following table:

For: Specify IRQ: and Address:
---- --- -------
COM1 4 03F8
COM2 3 02F8
COM3 4 03E8
COM4 3 02E8

Graphics and SSTV-Graph: Set this as appropriate for your system. Most users can specify "VGA (640x480)". A number of Super VGA cards are supported, but you'll have to refer to your VGA manual for register settings.

Printer: Again, set this as appropriate for your system. Most popular dot matrix printers and the HP Laserjet are supported. (As an example, for my Panasonic 1124, I selected "Epson 24-pin".)

Enable scrolling: This determines whether faxes will scroll
off the screen when being received. Set this to "Yes".

Default Picture Directory: Enter the disk and directory where
faxes will be stored, e.g. "C:\WEFAX".

Store Pictures in GIF 89a: JVFAX uses the GIF 89a standard to store
special information on each fax, such as mode, LPM and IOC. Unless
you're using other GIF software that can't handle this standard,
leave this enabled ("Yes").

Miscellaneous Settings: Hit Esc to enter yet another configuration
menu! There are just two settings you need to make:

Quicksave: This feature lets you save the last picture sent;
it works by continuously capturing faxes to a .GIF file, which
may become *very* large. Unless you have lots of hard disk
space, set this "off".

Initial RX Mode: Set to "1--Wefax 576"; this is the mode that
almost all weather faxes are sent in.

Hit Ctrl-Enter to leave this menu. Hit Ctrl-Enter again, and
you're done!

** Where do I find fax and what does it sound like?

A Fax signal will have a "scratchy wheel" sound when sending
a picture, and a carrier tone when idle. It can be found
easily in the maritime bands. Unlike RTTY, there are few
variations, and no transmissions are encrypted that I know
of.

Two stations I hear regularly on the US East Coast are NAM,
Norfolk, VA on 3356, 8080 (irregular) and 10865 KHz, and CFH,
Halifax, NS on 4271, 6496.5 and 10536. CFH sends faxes on
the hour, generally. I've found press fax on 9244, from
Buenos Aires, Argentina.

** What modes are faxes usually sent in?

Weather faxes are usually sent with an IOC (Index of Correlation--
the ratio of width to height) of 576, and an LPM (Lines Per Minute)
of 120. Press faxes, the few I have found, use an IOC of 288 and
an LPM of 60.

** OK, I'm hearing it. How do I tune in?

Using NAM, 10865 KHz as an example, follow these steps:

1) From the JVFAX main menu, hit F (Fax), and you'll be shown
a blank screen with a tuning indicator and a menu box on the
bottom of the screen.

2) Select the mode by hitting 1 ("Wefax 576").

3) Set the deviation to 400 by hitting the D key till it comes up.

4) Using your BFO, RIT or clarifier, tune the signal (in lower sideband) until you see a peak on the tuning indicator. Tune this peak towards the W (white) end of the scale (This will normally be 1.9 Khz below the center frequency, in this case 10863.1 Khz.) The indicator should look like this:

```
! <- Signal
! peak
! should
. . . .. .. .. . . ##! be here
----------------------------------------
B W
```

5) Hit A (APT); it should read "Running" and you should start to see a fax appear on the screen! To stop recieving, hit A again.

** I don't get a fax, or I get something garbled.

Check the mode; most fax transmissions use "Wefax 576", mode 1 in the program. The LPM should be 120. Check your connections to the interface. If that's in order, you may have an RFI or interrupt problem (see questions in "General Problems").

** I get a fax, but it comes out slanted.

Hit / and a line will appear; use the arrow keys to tilt and move the line so that it's lined up with a line on the fax (such as a border or a chart line). Hit Return, and the fax should now come in straight. Note that this is a permanent adjustment, and you shouldn't need to fix this ever again, no matter what faxes you subsequently receive.

** I get a fax, but it's not aligned with the edge of the screen.

Hit R (Rotate) and move a line with the arrow keys to the left edge of the fax (there'll be a black bar where the fax is supposed to start.) Hit Return and the fax should now be properly aligned.

** My fax is negative!

You're receiving the fax on the wrong sideband; try the other sideband. Most faxes will be sent in LSB. A few press stations transmit negative pictures (JVFAX can be set to fix this; see the docs.)

** My fax is too dark.
My fax is too light.

Your receiver is mistuned. If the fax is too dark, tune towards the white end of the tuning scale (peak moves towards W). If the fax is too light (washed out), tune towards the black end of the

tuning scale (peak moves towards B).

Also, make sure the deviation is set correctly, at 400 for most faxes. This is especially important for receiving the GOES satellite images that NAM sends.

** How do I save a fax to disk?

While you're not receiving a fax (APT "waiting"), the S key will toggle the save-file option on and off. Faxes will be saved in .GIF format to the disk and subdirectory you specified in the configuration screen.

** How do I print a fax?

Two ways:

1) While you're in the fax receive mode and not receiving a fax (APT "waiting"), P will enable your printer; it's a toggle, so hit P again to disable printing.

NOTE: You cannot have both Save to File and Print options enabled at once. Also, once the fax is printing, the Rotate command will not work on the printout.

2) Hit H (Show and Send Pictures). Select the fax you want to print. When it appears on the screen, hit P. JVFAX will ask how much width it will print in (0-100%); hit Return for the default (100%).

** The GIFs I save are too big! How do I shrink them?

It's not uncommon for weather faxes to be very large, especially if you regularly pick up 16-shade GOES images over NAM (a recent GOES fax from them "weighed in" at 870k!)

There are several methods you can use to shrink the size of your GIFs:

1) You can crop them. From the main menu select H (Show and Send Pictures); from the directory listing, select the file you want to crop. The fax will show up on the screen--select the Z (Zoom) option. Use the arrow keys to move the zoom box (which is about the size of a regular 640x480 VGA screen), and the X, Y, + and - keys to resize it. Hit Return and the cropped image will fill the screen. Hit S to save it (under a different name.)

2) You can reduce the resolution on faxes to be received. Most faxes (of the Wefax 576 variety) have a resolution of 1810x 1000, which makes for beautiful printouts, but is overkill if you're just using a GIF viewer.

To fix this, go into the Mode Editor (M from the main menu) and select the mode you normally use (e.g. Wefax 576). Step through the options with the arrow keys and select Resolution. For

Wefax 576, it'll normally be 1810. Enter a smaller value (800 is
OK) and hit Return.

If you're only interested in charts and not satellite images,
select the Grays option and set the number of shades to 2
(B&W only--no gray scale). Your GIFs should be much smaller,
though at a significant loss of resolution. (That being said,
I once saved some GOES images from NAM for a friend of mine
in 800x600x4 and they still looked good.)

** I get an all-white/all-black signal, no matter what signal is
coming in on the receiver.

Either your audio cable to the interface is broken, or you have an
interrupt conflict between serial ports. If it's the latter
you may need to move the interface to another port. Note that
MSDOS's HIMEM.SYS may conflict with JVFAX. (At least it does
on my setup [286, 1M, DOS 5.0]) (See "General Problems" for
more on this.)

USING PKTMON

Unlike HamComm and JVFAX, Pktmon has few options and is simpler in
scope. Using the same interface, Pktmon will decode HF and VHF
packet. Pktmon can log to a file, and will optionally keep track of
packets, assembling them into separate files for you. Note that the
program is receive-only.

While it will never approach, let alone replace, Baycom or a TNC, I've
been delighted with its very ingenious attempt at implementing AX.25
in software, and have found it a surprisingly fair performer. It even
comes with source code (Turbo Pascal) for implementing your own
projects with the interface!

There isn't much to running Pktmon, so here's a quick rundown through
the prompts.

"COM 1 or 2?" Self-explanatory.
Pktmon doesn't support COM3 or COM4.

"Packet type?" Enter 1 for HF packet or 2 or 3 for VHF packet.
I've never noticed a difference between the latter
two options in use.

"Log bad packets?" If you answer Y, packets with CRC errors will
printed, otherwise, not. I usually choose to
log them.

"File to log all packets"

Self-explanatory. If you don't specify a file,
packets will go on the screen.

"File to log sorted packets"

Enter a filename, _no extension_. Pktmon will
sort packets to the files <n:filename.#>, #=
0 to 9. It also creates a file <n:filename.OTH>
for uncategorized packets such as beacons.

That's it. Pktmon will start decoding packets until you hit Return.
There's a tuning indicator on the top of the screen that indicates
activity. Here are some sample unsorted packets copied off the air
on 14099 Khz around 2300:

Started Logging on 1993-04-16 at 18:00:11

for KC4FS -0 => W1DXQ -0 traffic

Phone call Jack. Please wait...

****** connection inactive for 5 minutes

Now, the questions:

** Where do I find packet and what does it sound like?

On HF, packet can be found mainly at the lower end of 20 meters (14090-14150 usually) and in the 30 meter band (10100-10150 Khz). VHF packet can be found on 145.01, 145.03, 145.05, 145.07 and 145.09, among other places. It has a "braaaap..." sound quite unlike RTTY.

** How do you tune in packets on HF?

On the upper edge of the screen, there's an "A" scale. While hearing packets, tune VERY carefully until the scale reads 6 or higher. Pktmon expects a tone frequency of about 1000 Hz.

** I'm logging sorted packets, but they're missing linefeeds.

You'll have to go into your favorite ASCII word processor and have it insert linefeeds. I usually copy all the <n:filename.#> files into a single file and fix it there.

** I'm getting lots of CRC errors.

On HF, this is, sadly, normal. Packet is just not well suited to a ever-changing ionosphere, and it's marvelous that it works at all. (When I copied the sample text, the ionosphere was *very* quiet, an unusual occurence as I'm writing this.)

On VHF, on the other hand, CRC errors may be a result of Pktmon being unable to keep up with transmission. 1200 baud is near the limit for this type of interface. I've also found that with my setup (in an apartment), I seem to be prone to multipath and other VHF anomalies that disrupt reception, especially of packet.

** The program locks up on me when receiving lots of packets!

If there's too much activity on the air, or the receiving tone frequency is too high, Pktmon tends to lock up, as it can't "follow" the signals fast enough. This has been reported by several users on Fidonet.

According to the author, Pawel Jalocha, if Pktmon takes a long time to terminate upon hitting Return, your machine may be too slow.

GENERAL PROBLEMS

** Can I use EMM386/QEMM or other memory managers with HC, JVFAX or PKTMON?

Generally, no. HamComm, JVFAX and PKTMON are interrupt-intensive and use up most of the CPU cycles. That's the price you pay for having the demodulation and decoding done in software (rather than in a TNC). JVFAX comes with its own memory manager, anyway.

Note: JVFAX may not work with MSDOS's HIMEM.SYS. You may need to remove the "DEVICE=HIMEM.SYS" and "DOS=HIGH" statements from your

CONFIG.SYS before using JVFAX. I've not seen any problems with
HIMEM and HamComm or Pktmon.

If you regularly use EMM drivers, Windows or Desqview, make
up a minimal boot disk disabling all such programs, before running
HamComm, JVFAX or PKTMON.

** I get noise from my computer--HELP!

One of the most difficult problems in linking the PC with the radio
is RFI. It's beyond the scope of this FAQ list to cover every
possible contingency, but here are some suggestions:

1) Keep your computer and your antenna *well* separated from
each other and use good, well-shielded, coax for the lead-
in.

2) The HamComm interface should be *shielded*--use a metal or
foil-lined box. Use good shielded cable for both the audio
and data connections.

3) Use RFI toroids (available at Radio Shack) on all cables.

4) Install 0.1 uF capacitors from the DTR and RTS lines to ground.

5) Install an audio isolation transformer between HamComm and the
radio. (Radio Shack #273-1374).

6) Make sure the monitor, printer and their connecting cables are
well shielded. Monitor noise is very common, as is printer
noise.

In my case, I had to do all of those steps. My 286 PC was feeding
RFI back through the earphone jack of my radio), *desensing* it
(ouch!) I never got all the RFI out, but I reduced it considerably
so that I only get a slight increase in background noise on a few
frequencies.

APPENDIX -- THE HAMCOMM INTERFACE SCHEMATIC

Here's a schematic of the HamComm interface, reproduced with

NOTE: HamComm sends RTTY through the COM port's TxD line, as well as the speaker. See the HamComm docs for more details.

If you're just interested in receive, omit the PTT and transmit audio circuitry.

None of the parts are critical, so raid your junkbox! Prices for equivalent Radio Shack parts are given for reference--which you can beat by judicious shopping/scrounging.

Parts List -- Main Circuit

Part Value Radio Shack # Price (1993)

C1 0.1 uF 272-135 $0.59 (for 2)
C2, C3 1 uF 16 V 272-1434 $0.59 each
D1-D4 Diode, 1N914 276-1122 $0.99 (for 10)
*D5 Diode, 1N914 276-1122
IC1 Op amp, 741 276-007 $0.79
R1, R2 100K 271-045 $0.29 (for 2)
*R3 1K 271-023 $0.29
*Q1 Trans. 2N2222 276-2009 $0.59

* Not needed for receive-only interface

Parts List -- Transmit Audio Filter

Part Value Radio Shack #

C1 .1 uF 272-135 $0.59 (for 2)
C2 .022uF 272-1066 $0.69 (for 2)
C3 .022uF 272-1066
R1 10 K var. 271-282 $0.49
R2, R3 15 K 271-036 $0.29 (for 2)
R4 220 K 271-043 $0.29

Miscellaneous:

Enclosure (RS #270-239 recommended, $2.19), PC board (RS #276-170, $2.79), audio jack (RS #274-316, $2.19 for 4), RFI toroids (RS #273-104 $7.95 for 2), DB-9 connector (RS #276-1536, $1.29), audio cable, plug to match radio.

If you buy all Radio Shack parts for the converter, it should cost $15 for the full circuit (plus transmit portion), not including the RFI toroids. Again, the circuit is not really critical--if you have any parts lying around that fit, use them!

CLOSING COMMENTS

This FAQ list was the inspiration of myself and many others on the Fidonet SHORTWAVE echo, who have been using and experimenting with HamComm and JVFAX for over six months, trading ideas and hints along the way. When more people asked me for help, there and on the Internet, I thought of the obvious and wrote this! <g>

The following get credit for lending me a hand:

W.F. Schroeder (DL5YEC), Pawel Jalocha (SP9VRC), Reid Kelly, John Palaima (N1NIG), William Nolle, Tom Carney (WB9RJX), Ken McKenzie, Derek Buchler and Stephen Lee.

Additions wanted
---

1) I'd like a list of "cornerstone" RTTY and FAX frequencies. In other words, if you're on the US West Coast, in Europe, Africa, the Mideast or Asia, what stations do *you* hear best? I'm not looking for an entire Klingenfuss text, just a few good frequencies for various parts of the world.

2) I've learned of another fax program, HFFAX5 (no, it's NOT related to SSC's software as far as I can tell..) The doc files that come with it are of the "I got this neat program from a friend-of-a-friend" slant, and I'd like to find out its status (shareware, freeware or pirateware) before I write about it further. Nothing gets my goat like mysterious ZIP files with no documentation!

2A) And has anyone used FFTMORSE (Soundblaster CW) or TOR117
(AMTOR terminal unit in software)?

3) I'd like to hear from anyone who's tinkering with the interface
or even the Pktmon source.

4) I do intend to update this list with the introduction of new
shareware, updates to existing programs, or (most likely) stuff
everyone else is using but that I never heard of. <g> (A new
version of HamComm is slated for later this year, BTW.)

More questions?

If anyone has questions or comments or even flames, drop me a
line! My address(es):

1704. Scanner mods

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-30 14:03:11 UTC
From: sjhawk2@pbhyf.PacBell.COM
Message-ID: <1993Apr30.140311.5352@pbhyf.PacBell.COM>
Source record: 282467
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc

I purchased a new scanner at Radio Shack this last weekend.
I seemed to be a new model and it was on Sale.
The model is a Pro-2080. It was cheap, it is small and so far
anyway it has worked pretty well. Does anyone know any thing
about this model? Are there any mods or tricks to it's operation
that anyone might know about?

Thanks Steve WV6U

1705. About TH-78 mods

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-30 14:05:00 UTC
From: ami9667@venus.tamu.edu
Message-ID: <30APR199309052296@venus.tamu.edu>
Source record: 282468

Hi folks:
I have purchased a new TH-78 and tried to do the mods. According to
the mods there should be 6 diodes under the shield. Mine has only 5.
Anyway I removed #4(cross-band) and #5(extended RX) but when I try to
remove #3(extended TX) I loose the extended RX and the TX is not the
range it should be. Did anyone have the same problem ? Any recommendations
will be appreciated.

Andreas - 5B4SJ/W5

1706. Re: X-tal filter 75 MHz

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-30 14:13:19 UTC
From: dstock@hpqmoca.sqf.hp.com
Message-ID: <C6AvI9.C1q@hpqmoea.sqf.hp.com>
Source record: 282469

I was guessing a bit about the exact application. I suspect it is an attempt to fix one of those rigs which show 2nd mixer intermod problems with signals passing through the 1st IF bandwidth. Narrowing the first filter will help, of course, but often the real problem is in having a very nasty 2nd mixer. Substituting a better mixer, along with a suitable LO port driver would likely yield better results and be affordable.

As far as crystal filters are concerned, things have progressed to the point where we can build affordable mixers with better intermod performance than the usual, available, crystal filters. This changes the optimum game-plan for a state of the art HF receiver somewhat. It appears that lower frequency filters are better for dynamic range. Their insertion loss is low, so there is an advantage in the noise floor direction, and the resonant energy is spread over a larger lump of quartz, giving an advantage in the big signal direction.

Some commercial filters have been found to have been spoiled by their designers forgetting about the effects of non-linearity in inductors and transformers used in the input stages. Some of the 1.4 MHz (Ex marine) filters now flooding the UK surplus market are very good indeed, although I've come across some that showed worthwhile improvement by re-doing their input transformer. I've built up a large collection of these, at a few pounds each, for my homebrew transceiver project.

To get to a 1.4 MHz final IF forces a choice:

Either mix straight to 1.4 MHz, and develop a wonderful preselector to give the required image rejection.

Or Use a double superhet with a high first IF and have a serious difficulty finding a first IF filter to give sufficient rejection of the 2.8Mhz away image of the 2nd mixer and still not limit the intermod performance.

I've been lucky, I bought a surplus box of special low distortion 15kHz wide filters at 68.6 MHz that had been made for a very high performance RX project that had been cancelled by a military/spook RX manufacturer, so I can have DC-30MHz RX coverage, but I'm planning a serious preselector as well !

The day is coming when the highest performance receivers will again be all LC filtered, not a crystal filter in sight. There is a race on, though, will the ADC and DSP approach there first?

Cheers
David GM4ZNX

1707. NASA Select Rebroadcast Help

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-30 14:32:38 UTC
From: brandtk@silver.ucs.indiana.edu
Message-ID: <C6AwEG.6K6@usenet.ucs.indiana.edu>
Source record: 282470

My TVRO system should be planted in the ground as I type. I would like to set up to re-transmit the NASA Select audio and/or video. I need the net's help with a couple of matters:

1) I need the address of the NASA office to contact for permission to retransmit the broadcasts. I dumped my old QSTs in my recent move, so I can't directly refer to the (?Nov 82) issue for that article.

2) What kind of VOX/ID unit are people using for audio? Repeater controller or homebrew?

3) How about ATV systems? There was a booth at Dayton advertising 'Shuttle video on ATV', but I didn't get to them (that was before I knew I would be getting my TVRO system this quick!)

All help appreciated.

1708. Postal rates from Germany

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-30 14:53:55 UTC
From: WOLF KOEHLER <WKOEHLER@ESOC.BITNET>
Message-ID: <93120.145355WKOEHLER@ESOC.BITNET>
Source record: 282465

Posted an airmail letter during my lunch break. It shocked me to learn
that there is now only one rate for airmail letters from Germany to
destinations outside of Europe (apart from a few French overseas possessions).
Before April 1st it used to be between 1.70 and 2.40 Deutschmarks (1.03 to
1.45 US$), now it's 3.00 Deutschmarks (1.82 $), no matter where to. Please
bear that in mind when you ask for a direct card from Germany.

1709. Comments on Dual Band HTs

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-30 14:56:02 UTC
From: Lawrence_Chen@lhaven.UUmh.Ab.Ca
Message-ID: <Lawrence_Chen.2k5e@lhaven.UUmh.Ab.Ca>
Source record: 282369

I'm about to write my test, its on Wednesday. I reckon that I'll pass with no problem, my only regret is that I waited so long before taking one. My friends kept telling me that I would probably find the material easy.

Anyways, as soon as I'm legal, I'm thinking about getting a Dual Band HT.

But reading all those magazine ads is starting to confuse me, they all have different ideas on what kind of specs to provide so that one can't directly compare them side by side.

So, I'd like to get comments from people who know something about these HTs.

Right now I'm looking at the various ICOM offerings (24AT, W21AT, W2A), the FT530 & FT470 from Yeasu, the Alinco DJ580T, and the Kenwood TH78A.

Some pointers on what would be important and what wouldn't be would be appreciated also.

Since this will probably be the only radio I get for a long time, since as soon as a certain somebody finds out what I'm spending.....things will be......

Paging features or tone squelch might be something I need, depending on how the Emergency Preparedness setup gets done.

1710. Re: Helical filters for HT's

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-30 14:56:46 UTC
From: zlau@arrl.org
Message-ID: <1434@arrl.org>
Source record: 282254

Pulling the filter off my bench (made out of 14 gauge wire
for low loss).
50.9 MHz 30.7 dB insertion loss
144.3 MHz .12 dB insertion loss, 34 dB return loss
145.5 MHz .29 dB insertion loss, 21 dB return loss
222.5 MHz 40 dB insertion loss
433 MHz 1.7 dB insertion loss

The capacitors are nickel plated brass tuning screws

Note that this 2 meter filter has less insertion loss at
2 meters than some commercial filters (designed for 70 cm).
However, it may be bigger than some HTs.

There is no aperture stop, so the coupling is quite large.
I suppose that using inductive, as opposed to capacitive
or aperture coupling, might be used to reduce odd harmonic
responses. I've occasionally noted that the harmonic responses
are overcoupled, though I've not really studied this problem in
detail.

|>

I tried this a few months ago. I could easily hear the RS10 mode A downlink
on my Radio Shack DX440 shortwave receiver. However, when I keyed my
IC02AT next to it, it overloaded the receiver and I was not able to
determine if my signal was present on the downlink. Using a remote antenna
(other than the built in whip) on the sw receiver may have helped, but
I just gave up at the time. Note that this method produces a MCW signal
rather than a true CW signal. It can lead to a very raspy note coming back
on the downlink, according to a friend (N4OGW) who has succesfully done
this. Also, the limited tuning ability of most handhelds (5 kHz) will
limit your abilty to compensate for doppler shift. But it's probably
still worth trying as an inexpensive way to try out the satellite.
I wouldn't buy an HT just for this purpose, however.
For more info, consult an article in QST last year call 'Working the
Easy Satellites' (sorry don't remember issue).

Only some harmonics, right? Helical filters are not "normal" LC
filters, they are really squashed transmission line filters. So
a 1/4 wavelength will be 3/4 wavelength at 3 times the frequency
and I would expect this harmonic to pass the filter.

I think that I wrote it correctly, but they didn't have sex ed where I went to high school so I might be wrong. When you look at the connectors you can see the proper way to do it.

At the risk of being redundant with something someone else has posted
that I haven't read yet :-) -- I post the following info from the
last time the molex questions were being raised:

Recommended Power Connectors
Ed Humphries, N5RCK

Collected from r.r.a.m:

Comments from AL N1AL:
Awhile back, there was a string devoted to the pro's and con's
of using Anderson PowerPole (TM) connectors as a "standard" connector
for the 12 V power input of amateur VHF FM transceivers. It was
stated that this connector had been selected as the recommended
standard by RACES in California and elsewhere. I talked to our
local RACES Radio Officer, and he had never heard of it. In fact,
he was opposed to the idea on the grounds that this is an
"oddball" connector not easily available to the average ham.

The "ARRL Field Forum" published the following:

"As a result of a study commissioned by the League's Volunteer
Resources Committee last year, the Field Services department is
recommending the MOLEX Series 1545 connector for use in
promoting compatibility and interchangeability among personal
VHF/UHF radio equipment at disaster and public event sites.
Polarity should always be verified prior to connecting radios
and power supplies."

[Drawing of two 2-conductor connectors. The "pointy" end is
the + connector, the flat end is the - connector. The male

plug with female pins goes to the power source. The female
plug with male pins goes to the rig.]

[N5RCK notes on the connector: the above description may not
make it clear - the "male" plug has the smaller outside
dimensions and hence is designed to plug "into" the "female"
connector. The male plug has enclosed female pins (hence is
very hard to touch or short the pins) and is to be connected
to the power supply side (source). The female plug has open
male pins (hence accessible) and is to be connected to the
equipment side (sink). The plugs have a flat (squared off)
end which should be used for the - (gnd/minus) wire. The
other end of the plug is "pointy", a roof shape end which
should be used for the + (positive/hot) wire. If everyone
wires their connectors properly, there should be no problems
with source/sink confusion and polarity will be correctly
observed.]

"The 1545 connector is rated at 25 volts, 8 amps. Wire size
requirement is #18 AWG or greater. An in-line fuse between
the power source and the first connector is recommended. The
connector is available at Radio Shack stores, part #274-222."

[N5RCK note: 1993 catalogs show 12 amps - this may mean the
connector has been further qualified, or it may reflect a
vendor update. Anyone with good _current_ references?]

Sounds like just the thing. I have noticed that many hams
are using this connector already.

Now to my (N5RCK) notes:
Some Questions that were emailed to me and my answers:
> Thanks for your comments on the current power connectors debate -
> I've now been able to locate the parts.
>
In addition to the Radio Shack package, I've bought the various
pieces from bulk bins at large electronic supply stores. If you
are not sure what you're looking for, I'd suggest you buy a set
from the 'Shack, and take the parts with you for comparison.
Molex makes identical looking parts in sizes just smaller and
larger than the R.S. #274-222. Don't get the wrong size or you
lose the compatablity.

> However, I can't see anything about them that particularly
> recommends them to me - are they only popular because a number
> of people already use them (and Tandy/RS is found in most towns),

Yes and yes (i.e. ready availability is a plus, and lot's
of people already use them thanks to earlier RACES/ARES
standardization efforts).

> or is there some feature that's particularly good ?
>

As long as you follow a "standard" connection scheme (i.e.
red + wire always goes on top "pointed" end, black - (common)
wire always goes on bottom "flat" end, the "female" side with
exposed male pins goes to the sink (the radio), and the "male"
side with enclosed female jacks goes to the source (the battery/
power supply)), then:

a)You can't connect source to source (which would be dangerous)
b)You can't connect sink to sink (which is not useful anyway)
c)You can't cross-connect polarity (which would damage something)
d)You can't accidentally touch a "hot" wire (source plugs enclosed)
e)The connection does not rely on color codes (easily mistaken)
f)The connection is easy to make without awkward actions
g)You _can_ share radios and power sources easily in time of
emergency (I list this because if the "standard" isn't widely
and easily deployed, it doesn't matter if it is technically
superior)
h)You can easily make jumpers to go to OEM unique connection
points (allows you to use multiple sink/source combinations
without purchase of over-priced OEM parts)
There must be others I missed :-)

> It seems that others don't share my need to have a panel-mount
> variant : is this the case ?
>
As such, you're right. Heathkit used to use various panel/box
mounted connectors and you had a dickens of a time adapting to
them. Later, I noted when I got my HW-9 they saw the light:
instead of taking up interior real-estate, they ran the power
wires out a grommeted hole and used (have you guessed already)
Molex 1545 connectors. Perhaps you could adapt the same principle.
Or do as I did with my hf rig (has a funny panel mount that they
supply a pre-wired connector for): I cut the wire about four inches
out (to give me something to hold) and installed Molex connector.

Remember, this "standard" is primarily for emergency communications
use. There are certainly applications where something else is more
appropriate. And if someone _really_ doesn't want to cut off existing
OEM connectors to install Molex, all they need to do is build an
adapter cable so they could use someone elses power supply or someone
else could use their radio. For H/T connection to external power sources,
it's not much of an issue since you've got to rig _something_ in any
case! Same for gell cells, etc. - you've got to build a wire harness
and make some kind of interconnection. Enter the Molex 1545!

And (BTW) you _can_ cut a properly sized rectangular hole, fold
back the "ears" on the 1545, and snap it into the panel. It goes
without saying that this is only useful on the sink (equipment)!

Hopes this helps! Cheers and 73 -

Mechanical AM - spinning antennas -

TACAN (Tactical Air Navigation) actually used (through 1972 anyway)
a rotating antenna as a modulator to send azimuth (heading) info to
aircraft. The transmitter fed a stationary vertical radiator with a fiberglass
cylinder spinning around it at 900 rpm. Located on the cylinder was a
vertical parasitic element, causing a resultant rotating cardioid
pattern. The aircraft detected this 15 Hz modulation and compared its
phase to a reference pulse issued by the transmitter whenever the
parasitic element passed North. This gave the aircraft a heading to
the TACAN beacon.

For completeness sake: There actually were an additional 9 parasitic
elements adding a 135 Hz modulation which was used for additional
accuracy. The transmitter didn't supply just a CW carrier, but a
batch of pulses which were part of the DME (distance measuring
equipment) function of the TACAN beacon. Shipboard antennas had to
be slaved to the ship's navigation system to keep them
pointed North. Ground stations were easier :-) Frequency was
around 1 GHz and I remember the spinning cylinder being about 3 ft
in diameter. Later systems all went to electronically steered arrays I
think. I don't recall hearing about any mechanically spun VOR systems
as the VOR frequency was much lower.

From days gone by at the Naval Electronics Systems Test & Evaluation
Facility (NESTEF) in Maryland. Lots of neat toys to play with.

Source record: 282350

ZCZC AE47
QST de W1AW
DX Bulletin 21 ARLD021
~From ARRL Headquarters
Newington CT April 30, 1993
To all radio amateurs

SB DX ARL ARLD021
ARLD021 DX news

Thanks to the YCCC PacketCluster Network and Pete, KB1HY, for the items in this week's bulletin.

UGANDA. At the rate things are going, this one will probably move out of the top ten most wanted countries list for DXers. 5X1XX has been very busy working 30 and 17 meter CW. 5X1A and 5X1B have been handing out their fair share of Qs, too. For the data crowd, 5X1XT is on 20 meter RTTY.

LOW BAND REPORT. Despite certainly not being in the prime time of the year for DXing on 160 meters, some good pickings are around for the patient. Northeastern amateurs have worked CE8ABF on both CW and SSB. Listen between 1835 and 1840 kHz for this one. Other goodies include SV8ZS on 1828 kHz at 0304z, ZP5JCY on 1832 kHz at 0237z, and EI5HJ on 1833 kHz at 0035z.

80 METER REPORT. The approach of Summer doesn't seem to have had much affect yet on this band. New Englanders have worked ZL3ABV at 1010z, JA1HQT at 0957z and CX4GL at 0933 and 0346z with CW. SSB catches include CP5NU at 0138z, VP2EY at 0240z, ZP5PT at 0131 and 0200z, PY5CC at 0134z, and PY2HC at 0100z.

40 METER REPORT. Operating sunset and sunrise times is productive on this band. Recent finds include 5B0/DL6SDW at 2344z, ZL1ST at 1041z, and JH1GRG between 0900 and 1030z, all operating CW.

30 METERS continues to provide good DX all year long. Some of the better finds have been VK6RO at 1103z, OY1CT at 0029z, ZK3RW at 0529z, 5X1XX at 0340z, 3B8FG at 0327z, 5X1XT at 0321z, and 7P8SR at 0205z.

20 METER REPORT. For CW buffs, listen for BV4JB on 14032 kHz at 1340z, VK5ML on 14043 kHz at 1011z, and VR6BB on 14025 kHz at 0626z. For SSBers, listen for VK8YL on 14226 kHz between 1130 and 1215z, 9M2MW on 14245 kHz at 1032z, AND VR6BX on 14260 at 0535z.

17 METER REPORT. This band offers T30JH on West Kiribati operating SSB on 18155 kHz around 0350z. Also look for 5X1XX around 18070 kHz between 2300 and 0100z.

15 METER REPORT. YB1ARW can be found on 21294 kHz SSB around 1400z. OD5/SP7LSE continues to be active from Lebanon. Check 21015 kHz CW around 1400z.

12 METER REPORT. PacketCluster spots are few and far between for this band. However, ZL2ANT was worked on 24900 kHz at 2315z, and ZK2XO on 24895 kHz at 2227z, both from the east coast. Not bad for a dead band.

10 METER REPORT. And if you think 10 meters is dead until the next sunspot peak, think again. Don't forget that a band that is wide open can sound dead if there is no one transmitting. The moral? When in doubt, call CQ. Here is a list of some DX worked during the past week.

C91S on 28480 KHz at 1345 and 1623z
VK2NO 28355/0101
VR6JJ 28490/0055
PZ1CZ 28446/1752
3X0HLU 28470/1431
ZS6MI 28440/1220
ZL3AZ 28455/0154
ZL2XO 28027/2055 and 2114

SATELLITE REPORT. Enthusiasts of orbiting artificial propagation mention working the Italian DXpedition to Liechtenstein; TA1D in Turkey; OY1CT on the Faroe Islands; UL7 and UY8.

THIS WEEKEND ON THE RADIO there is a little something for just about everyone. The DXYL/NAYL phone contest wraps up on the 29th. See March QST, page 110 for details. Saturday ushers in the 0600 local time start of the ARRL UHF Sprints on 902, 1296 and 2304 MHz. See March QST, page 110 for further information.

On Saturday and Sunday there is even more to choose from. To wit, the ARI International DX contest, MARAC County Hunters CW contest, Oregon QSO Party, Ten-Ten International Net Spring CW QSO Party, and the Texas QSO Party. Whew. The particulars for these events are on page 106 of April QST.

And if that wasn't enough, Sunday, May 2 will be a prime for EME contacts.
NNNN

I know I shouldn't do this (it's somewhat like dumping gasoline on a raging fire), BUT.....

Every so often, someone figures out an AMAZINGLY simple way to do zero-bandwidth communictions; all you gotta do is use polarization modulation! For a simple example, mount a pair of beams, one vertical and one horizontal; switch between the two to send CW! Go a little faster with the switch, and send anything you want...at ZERO bandwidth!

Now, for extra credit, figure out what's wrong with the above, and how it relates to the original question. (And PLEASE, let's not have everyone posting the answer...this is something I'd like some people to think about for a while, OK?)

This is true for full size (90 degrees) quarter wave resonators.
If the resonator is tuned with a capasitor, the 3/4, 5/4 etc.
resonances are no longer exact odd multiples of the fundamental
resonance. However, I have not seen the frequency response for
these helical filters. If you select a helical filter that just tunes
down to your transmitted frequency (maximum capacitance), the 3/4
resonance is far away from your third overtone, and thus the
attenuation should be greater.

Most helical resonators are tuned with a small capacitor trimmer.
The trimmer tunes the 1/4 wave and 3/4 wave filters a diffferent
amount. There should still be some appreciable attenuation at the
3x frequency.

: For instance, what would it take to sue someone who you can "prove" was
: jamming the repeater? What "evidence" would be necessary to "prove" your
: case in a civil court (since it is a preponderence of evidence and not
: beyond-a-reasonable-doubt)?

I think the problem is that even if you prove that he was causing
malicious interference, you would collect little or no money. To be
awarded a judgement, you have to show a financial injury. Not being
able to talk on your favorite repeater wouldn't likely get you much
of an award.

Don't worry, they'd apologize! (:-)

Now - to business (:-).

Could somebody please explain to a poor ignoramus, what's the
difference between scrambling of cable signals, and sattelite
TV signals? Is Sattelite TV Descrabling equipment different
from their cable TV "brother"?

And what are the sources for it?

I'm not either, but I do have a copy of part 15.

AM broadcast band (15.219)
100 milliwatts input power.

CB (operating under part 15.227)
10000 microvolts/meter at 3 meters

FM broadcast band (15.239)
250 microvolts/meter at 3 meters. You stick this one in the
antenna equations, and you get a radiated power of something
like 30 nanowatts. Good for 50 feet or so.

I think the incident that Brian is referring to is one in which people
were buying clone chips for their cable box. One person would subscribe
to all services and everyone with the same ID code would also get the
service. All the cable company did was turn off the services for the
offending ID and then collect the people who called to complain.

BTW, this is a real brain dead way to pilfer cable services given the
pages of advertizing in the back of most electronics, science and stereo
magazines for descramblers that simply descramble whatever they come
across regardless of what the cable box is authorized to view.

Of course the big question is why bother?

I'm not positive, but I belive the "spike" is not a high energy spike, but
rather a digital signal that "zaps" the cable box into a state of
inoperability. I think it is something the cable box is designed to look for.

SpaceNews
=========

MONDAY MAY 3, 1993

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for unlimited distribution.

* STS-55 NEWS *
===============
The Space Shuttle Columbia, with the German Sapeclab Payload on-board,
was successfully launched from the Kennedy Space Center on Monday at
14:50 UTC.

STS-55/SL-D2 will carry out materials and life sciences research for
Germany using the European designed spacelab hardware. Of particular
interest to radio amateurs is the inclusion of the SAREX (Shuttle Amateur
Radio Experiment) hardware on this mission. SAREX allows school groups and
amateur radio operators to talk to the Shuttle crew while they are on orbit.
STS-55 is expected to perform around-the-clock research over the planned
9 day mission.

[Submitted by Frank H. Bauer, KA3HDO for the SAREX Working Group]

* DOHOP TEST PLANNED *
======================
Another transatlantic dual-hop (DoHop) opportunity between RS14/AO-21, Mode
B, and RS10, Mode A, is expected to take place on 16 May 1993 from 16:22:12
to 16:27:32 UTC. In addition, the following orbit (at approximately
1804-1811 UTC depending upon your location) will provide an outstanding
opportunity for DoHop contacts over much of North America. The Russian
command station has been requested to switch RS14/AO21 to Mode B,
Transponder 2, during these orbits as well as several earlier ones during
which there will be DoHop opportunities for European stations.

Stations wishing to participate by transmitting are asked to uplink to
RS14/AO21 using CW or LSB between 435.100 and 435.110, holding your uplink
frequency constant. Call CQ DoHop or otherwise identify each transmission
as DoHop. DoHop signals are likely to be much weaker than those from

stations uplinking to RS10 on 145 MHz; it will thus be appreciated if all stations refrain from uplinking to RS10 on 2m during the few minutes of the DoHop tests in order to keep RS10's sensitivity as high as possible; instead, please listen for DoHop stations on RS10, Mode A.

North American stations please report results via packet to W2RS @ WA2SNA.#NJ.USA.NA or via Internet to w2rs@amsat.org, and those in the UK and Europe to G0NKA @ GB7DTX.#26.GBR.EU.

[Info via Ray, W2RS]

* ARSENE LAUNCH NEWS *
==========
A press conference was held in Paris at the CNES Center on April 20, 1993. A short animation movie presenting ARSENE missions was made by Marc de Filippis F6EZH for CNES. Jean Gruau F8ZS RACE President recalled the history of ARSENE project. Jean Henri Llareus professor at Ecole Superieure de l'Aeronautique et de l'Espace and in charge of control operations in orbit spoke of the remarkable work performed by ENSAE students who are going to conduct all ARSENE commissionning operations. Jean Marie Gaucheron, F3YP, REF vice president explained the specificities of radio amateurs experiments. From the ESA center in Kourou french Guyana, Jean Pierre Redon, ARSENE project manager, gave the latest information on ARSENE satellite integration. Radio Amateur members of RACE and of the ATEPRA were present at the meeting. Jean Pierre Redon in ESA space center in Kourou explained that ASTRA was to be put on top of ARSENE satellite and then both moved to the upper part of the Ariane rocket last Wednesday.

Unfortunately, in the afternoon an accident damaged the ASTRA omni directionnal antenna. RACE President Jean Gruau F8ZS has confirmed the following official information about the new date for ARSENE launch. It is now scheduled for the night of Tuesday May 11th to Wednesday 12th at 00:52-01:50 UTC. ASTRA 1C TM/TC antenna has been repaired and the launch campaign will start again at D-7 days.

[Info via Bernard Pidoux, F6BVP, RACE Vice President for International Relations]

* MIR NEWS *
==========
The following message from MIR was copied on 145.550 MHz on April 27, 0219 to 0229 pass by Joe, WA2GSY in New Jersey:

"Columbia Columbia Columbia
This is Russian Space Station Mir, Cosmonauts on board Mir station greet the American/German crew on Columbia with their successful take off.

Our calls are U9MIR Gennadiy Malakov and R2MIR Aleksandr Polischuk, we hope to have voice QSO with you during your space flight.

Good luck to you for your flight.
Best 73

Mir Station crew."

[Info via WA2GSY]

* HITEN NEWS *

I think that you would be able to sue based n the fact that the jammer was interferring (sp?) with the duties of that repeater. You can say members of the repeater club pay X amount to use the atupatch, etc and the jammer was keeping them from using that service that they paid for. It a sense it was stealing! I am stretching this a bit since the rest of the repeater functions are free, but it can't hurt to try. Find a local lawyer who is a HAM and see what they have to say.

1734. Two-Line Orbital Element Set Format

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-30 21:33:54 UTC
From: tkelso@afit.af.mil
Message-ID: <1993Apr30.213354.25087@afit.af.mil>
Source record: 282355

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.misc on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (513) 427-0674, and are updated daily (when possible). Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity. In addition, element sets (also updated daily) and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a eleven-character name.

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
(Letters, blanks, periods, plus signs = 0; minus signs = 1)

Line 2
Column Description

```
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293
2 11416 98.5105 69.3305 0012788 63.2828 296.9658 14.24899292346978

1736. Two-Line Orbital Element Set: Space Shuttle

Newsgroup: rec.radio.amateur.misc
Date: 1993-04-30 21:40:13 UTC
From: tkelso@afit.af.mil
Message-ID: <1993Apr30.214013.25863@afit.af.mil>
Source record: 282357

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (513) 427-0674, and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

I'm thinking "Small Claims Court", where the limit in this state is $1,500.

Just think. One $1,500 judgement for each "infraction". Then, get the
state Sheriff to confiscate the jammer's radios for sale at public auction
for settlement of the judgement!

Who needs the FCC and ARRL to deal with jammers! Let's take the offensive
and develop some strategies that we can use NOW!

Why not do the load balancing in the voltage regulators -- rectify and smooth each transformer separately and pass them through their own pass transistors. Build a circuit to regulate one side (the master) to a given output voltage then use that as a reference voltage to control the regulator on the other (the slave) side. This regulator would keep the difference between master and slave power supplies to zero.

A little more hardware but not too much of a problem.

Ed, you make a good point - but it seems as though hams have already suffered enough by being victims of precisely what you described. Perhaps it is high time that we use that system to our ADVANTAGE instead of always being screwed by it.

If we hams just sit back and suck up to "proper procedures" for absurdly long time periods (which often seems like what it takes), nothing happens! Washington agencies are in a state of semi-permanent inertia.

It is time to get both the agencies AND our congresscritters up off their collective complacency and get them to WORK FOR US, instead of against us. The ONLY way that is going to happen is to get on their case and wield that political influence before somebody else wields it on US.

>AL N1AL "Not a lawyer"

Well, I'm not a lawyer either and I don't play one on TV. :-)

BUT, there are both REAL and *punitive* damages. While you'd have a tough time showing real damages, punitive damages are another matter. Geez, people win huge awards for pain and suffering all the time.

Having said that, I will then say that there are so many stupid and frivolous lawsuits, I can't help but think that most judges would find this subject in that category and either boot your case out of civil court, OR - claim that the FCC has prior jurisdiction in the affair and require you to go to a criminal proceeding. Which requires the FCC to DO something.....

Right back where we started, aren't we?

This is not true. You *must* have a valid amateur license to transmit
on amateur frequencies. Even then, different classes of license authorize
operation on larger and smaller bands of frequencies.

I believe a licensed amateur may operate a remote-control transmitter
in a model craft at power levels not to exceed 1W without regularly
identifying, but a license is still required.

>one but as I understand this is one of the best forms of harassment in US
>jurisprudence and frivolous lawsuits abound, almost without retribution, even
^^
>though technically their is redress for frivolous lawsuits. Seems like
>something to consider if you have some evidence.

The first question to ask is one of JUSTICE. What does the jammer to
to DAMAGE YOU or other users who would join in a lawsuit? Is it
REASONABLE to expect a judge to award you DAMAGES of any sort or some
injunction?? If you are trying to conduct business on some commercial
repeater, and some jammer prevents you from clinching a deal, you have
clear monetary damages. How about your local ham repeater? There are
certainly some sorts of damages, but what are they and how large can
they reasonably be? Judges do not award damages for mere annoyance.

The second point is that you CANNOT win a suit without "one shred of
evidence". To win on Summary Judgment you must prove a prima facie
case (by overwhelming documentary evidence, usually something like
a signed contract that the other side does not deny). You need
reasonable, well documented evidence to win any case.

The third point is that, even if the other side does not show and you
win by "default", you MUST PROVE your damages to the judge. You must
prove at least a reasonable case to get damages awarded.

Next, it is often hard to COLLECT on a judgment! Getting a judgment
is often the easy part. If the jammer is poor or does not care, the
collection is really rough.

Frivolous suits are not a serious problem in my corner of the world,
but certainly can occasionally be a pain. Don't bring one, please.
If you ever have one against you, just be honest with the judge and
do your best to obtain sanctions (not hard to get in many circumstances.)

I WOULD encourage you to think along the lines of a civil suit for
multiple intentional jamming. I would suggest you contact a good
tort attorney to see what theories might prove successful, and to see
what, if any, damages might be reasonable, under the circumstances
presented.

Most of all, just be reasonable. Think of honest justice and what is
best for you, your repeater, and ham radio. Keep calm, talk it over
with others, like here. Good luck.

[... stuff of argumentative content ...]

> Wrong. The flying receiver would see sidebands at the frequency of its
> revolution rate. (A VERY fast airplane!)

Now, let's see if I have this right. You take an unmodulated carrier,
propagate it with directionality, and then rotate the signal about an axis
perpendicular to propagation axis. Next you board a speedy jet and
follow the maxima of the beam looking for the signal and modulation
components. Flying in this manner, do you see both the carrier and
some sidebands, or at least "sidebands".

If so, we have a new phenomena. Change the scenario just a tad. Mount
your
receiver on an extension of the x-element beam's boom and measure the
frequency received. If you have some other than just the carrier at the
frequency of the non-rotating signal, then a few texts will have to be
rewritten.

Source record: 282361

SB SAREX @ AMSAT $STS-55.016
SAREX Packet Ops

May 1, 1993 @ 02:00
To all radio amateurs:

The SAREX Operations team at the Johnson Space Center have recently drafted a flight note to the STS-55 crew asking them to turn on the SAREX packet robot. This has been approved by the Shuttle flight operations team and has been uplinked to the crew. While the SAREX Working Group cannot guarantee that the packet robot will be turned on, we anticipate that it will be operating over the next few days.

SAREX packet operations are conducted on the following frequencies:

Downlink: 145.55 MHz
Uplink: 144.49 MHz

Please listen on the downlink frequency for Shuttle packet activity BEFORE sending uplink packets.

Station Callsign: W5RRR-1

Those of you who have been listening to the Shuttle downlink from NASA select and WA3NAN are well aware that NASA has made a concerted effort over the past few days to conserve power on the Shuttle. This was being performed in an attempt to extend the mission an additional day. SAREX packet activity has been also curtailed over the past few days as part of this power conservation effort. Although this power conservation activity is still in progress, the crew was given the go ahead to turn on the packet robot.

Good luck and 73,

Frank H. Bauer, KA3HDO for the SAREX working group

SB SAREX @ AMSAT $STS-55.017
STS-55 Element Set GSFC-013

Enclosed is the latest Keplerian data for STS-55 as generated by
Ron Parise, WA4SIR at the Goddard Space Flight Center. Gil Carman, WA5NOM
reports that the RCS burn performed yesterday has allowed the Shuttle to more
closely follow the orbit it was placed in near the beginning of launch. As
such, element set GSFC-013 is currently 4 seconds later than the prelaunch
element set JSC-007.

Gil Carman also reports that the lower central U.S. will have good visible
passes before sunrise each morning, starting Sunday.

STS-55
1 22640U 93 27 A 93120.62020368 0.00044855 00000-0 12708-3 0 131

> <Disclaimer>

Satellite TV Video modulation is FM, not AM. The audio on scrambled satellite systems is usually digitized as well, and not available in the usual 6.8 MHz audio sub carrier. Satellite TV Descrambling equipment is completely different from that used by Cable systems for subscribers.

To find out more, check the FAQ in rec.video.satellite.

Posted-By: auto-faq 2.4
Archive-name: radio/ham-radio/elmers/admin
Revision: 1.4 04/25/93 23:02:45
Changes: pit-manager.mit.edu is now rtfm.mit.edu

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via Usenet. Any other uses, please E-mail for permission.

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described at the end of this article.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Edwin Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called StratComm) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the

benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I have started to maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@unomaha.edu, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 4 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion posting to this message, "Amateur Radio Elmers Resource Directory." Since the list is cross-posted to rec.radio.amateur.misc, rec.radio.info, rec.answers, and news.answers on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp.cs.buffalo.edu /pub/ham-radio/elmers*
rtfm.mit.edu /pub/usenet/news.answers/radio/ham-radio/elmers/*

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/list
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

--
73, Paul W. Schleck, KD3FU

pschleck@unomaha.edu (personal mail)
elmers-request@unomaha.edu (Elmers List administrivia)

* Possible origins of the word HAM:

The acronym "Home Amateur Mechanic" or...

from the Cockney pronunciation of "L'amateur" or...

the initials of the founder of the American Radio Relay League, Hiram Maxim, W1AW (his actual middle name being Percy apparently notwithstanding) or...

from the call letters of one of the first amateur stations at Harvard, H.A.M. (please, no flames from W1XM at MIT)

Dale Mosby, N7PEX, offers the explanation that HAM must stand for "Hardly Any Money," considering the investment one could make in the hobby.

Knowledgeable individuals from the American Radio Relay League (ARRL), and other radio historians, seem to agree that the terms "Ham" and "Lid" (an inept operator) both originated with landline telegraphy. A "Ham" was a show-off and a "Lid" was a telegraph operator so inexperienced, he had to use a pot or can lid to rest his telegraph sounder on to properly copy the code.

As an interesting historical footnote, early telegraph operators may have been the first to experience the infamous curse of our communications age, Repetitive Stress (or "Carpal Tunnel") Syndrome (called "Glass Arm" in those days, which encouraged the invention of the semi-automatic or "bug" key).

(Larry E. McDonald, N6ZMB, wrote to point out another plausible origin, which doesn't necessarily contradict the ARRL version. The term "ham" may have been derived from "ham-fisted" or "ham-handed" to describe poor telegraph operators who were hired from the ranks of radio operators. Or maybe "ham-fisted" and "ham-handed" are derived from "ham." Who knows?)

1752. Amateur Radio Elmers Resource Directory

Jay Appell --> KA1SNA

1976-1978 FCC Personal Users Radio Advisory Committee
Task force for Rules Rewrite Citizens Radio Service
Rules interpretation

Currently work for Stratus Computers/Technical Support Engineering

Address: Jay_Appell@cac.stratus.com
Telephone: 1-800-458-0042 X2548

I enjoy Amtor, RTTY, and SCA reception.

If you would like to leave me mail by modem, use the BBS 1 Hopedale Center at 508-478-6969. This is a new amateur BBS running from 7AM to 7PM EDST. The board usually runs beyond 9PM daily. Until I can get another server, online times will vary. We honor modems running 9600 baud/MNP 5.

Discussion groups have been setup for all ham radio vendors. Comments shared on this BBS will be conveyed to the ham radio company referenced in the forum. This platform will make companies aware of how the amateur radio community feels about their products. Please indicate otherwise if you don't want the comment forwarded.

Author of the following MS-DOS ham programs:

AutoExam - Examination simulator and study aid
AutoCW - Morse Code practice program
DOSGATE - allows users to run programs on your PC remotely (AutoExam
compatible)
AutoCall - Allows use of the Buckmaster HAMCALL CD-ROM online callbook
with DOSGATE
AutoFax - Allows reception of weather fax using Kantronics TNC's
SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available from wuarchive.wustl.edu under
/mirrors/msdos/hamradio or write me at:

7 Red Field Circle
Derry, NH 03038

and enclose:

A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5" or 5.25").
A Self Addressed STAMPED return diskette mailer.
A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

PACKET: WB5LMJ @ WB5MJS.OK.USA.NA
Voice 405 536-8822, Ben's Place (Benjamin Franklin) BBS 536-6988 9p to 6a
PhD candidate, University of Oklahoma in Adult and Higher Education
Educational Advisor, American Radio Relay League
221 SW Crystal Hills Drive, Lawton, Oklahoma 73505

I am primarily an adult educator conducting research in self-directed learning. I have been involved in the following activities:

- Teach licensing classes, since 1974.
- Organize clubs, Stuttagrt Amateur Radio Club, Panama Canal Astronomy Club, Lawton Astronomy Club.
- Public speaking and publish on growth in volunteer organizations, marketing adult and higher education and teaching amateur radio courses.
- Research in adult learning theory, adult motivation and organizational theory.
- Conducted a SAREX activity that involve seven communities, 21 schools and 3,000 children.

I am primarily interested in assisting amateur radio clubs grow.

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

[819]
Electronic Filings

The FCC has changed its rules to allow for the eventual electronic filing of license applications in the various private radio services. Currently all license applications must include a handwritten signature. But last October Congress amended the Communications Act to allow electronic filing of applications, applications signed in any manner or form including by electronic means.
The Commission says that any changes to come will only be after it has established procedures for electronic filing. For now amateurs, and all others applicants are still bound by the handwritten signature requirement and will be for some time to come.

*****
SAREX SUCCESS

STS-56, the Discovery, has written itself into history as a record breaking success. The five-ham crew headed by their Commander Ken Cameron KB5AWP racked up a number of firsts during the mission. They talked to students at eighteen schools worldwide -- one more than the previous record set on STS-45. Good clear contacts were reported as young students asked questions about life in orbit. Thirteen of those schools were in the United States, two were in Great Britain, one in Australia, another in Portugal and one was in South America.
This trip on the space shuttle Discovery also broke new ground in the world of Amateur Radio when Mike Foale, KB5UAC talked to Cosmonaut Alexander Bolishuk (SIC??) R2MIR aboard the Russian MIR space station as the two spaceships passed within 135 kilometers of one another on a Saturday evening. That was the first two-way contact between orbiting craft.
Yet another first was a Fast-Scan ATV transmission that was climaxed when the Johnson Space Center Amateur radio Club W5RRR sent live pictures to Discovery from the Mission Control Room. Cap-Com was a little surprised when Ken Cameron on board the orbiter asked him to wave. From Cap-Com came the reply: "Next time, you will have to ask for permission to come aboard."
Before signing off, Cameron told Mission Control to: "Look sharp. You never know when Discovery might be watching you."
Slow-Scan television, packet radio, and a few general contacts rounded out the schedule for the all-ham crew of STS-56 consisting of Ken Cameron KB5AWP, Mike Foale KB5UAC, Ken Cockrell KB5UAH, Steve Oswald KB5YSR and Ellen Ochoa KB5TZZ.
Those who copied SAREX transmissions from STS-56, or who were

lucky enough to establish two-way radio contact with the Space Shuttle, should direct their QSL requests to: STS-56 QSL C/O Vienna Wireless Society P.O. Box 418 Vienna, VA 22183
Include a self addressed stamped envelope. Non-US stations should include the appropriate number of IRCs with your QSL or a $0.50 U.S. stamp on the envelope. The Report should include callsign, whether worked/heard, date, UTC time, mode, frequency, and QSO number for packet connects.

*****
VEC CONFERENCE LIMBO

The annual meeting of Volunteer Examiner Coordinators appears to be in a state limbo. This is because of the FCC is short some 6 to 10 days worth of funding to keep its employees at work. As a result, the agency now plans to furlough its staff one day per pay period, and it now appears that the date of the VEC Conference could be one of those days.
The Conference Chairman is Don Tunstill, WB4HOK. He has sent all VEC's a letter indicating that the Conference for June 18th has a few problems. Tunstill wrote in part -- and we quote -- "As of last Thursday, all branches of the FCC have been notified that the following unpaid furlough days will be taken by all employees. These are May 28, June 4, June 18, July 2, July 16, July 30, Aug. 13 and Aug. 27" -- end quote.
While Tunstill works toward setting a new meeting date with the FCC, another VEC, Gordon Girton, W6NLG of the Sunnyvale VEC says that the group definitely wants your input regarding future testing matters. This is especially true in regard to the new element 3 B. If you want to send your comments to the Question pool manager send them to the Western Carolina Amateur Radio Club VEC, 5833 Clinton Highway, Suite 203, Knoxville, Tennessee 37912-2545.
Our thanks to Gordon Girton, W6NLG for passing this information to us.

*****
IS IT AN INVESTIGATION

The FCC is now admitting that there is an investigation of possible testing irregularities going on in upstate New York, but a Commission spokesman says that its is limited to only one individual at this time. In a telephone conversation with Westlink Report publisher Burt Hicks, WB6MQV, the FCC's Thomas Fitz-Gibbon admitted that the agency is now officially looking into an admission of a particular applicant. According to Fitz-Gibbon, this particular person is alleged to have admitted being away on vacation at the time the test in question was given. Previously the FCC had said that no investigation was contemplated and none was taking place.

*****
More power denied

The Commission has denied a request for a waiver of the amateur 1,500 watt power output limitation. Dale Gagnon, KW1I, of Bowe, NH, had asked for the waiver earlier, as well as a reconsideration of the FCC's original denial. The FCC said that Gagnon's latest request for a waiver has not shown that his circumstances are unique nor has he presented any facts that would warrant a waiver. Gagnon wanted the waiver to legally operate on AM at a PEP power more than 1,500 watts output. Its unknown if Gagnon will file an appeal.

*****
HAM KILLS HAM

A sad story out of southern California. Word that a newlywed ham has been arrested in the shooting death of his wife. Tyrone Casey Hyia, N7ZMM has been booked into Orange County California jail on suspicion of murdering his thirty-three year old wife Michelle, N6ZUM.
News reports say that the shooting appeared to be the result of a domestic dispute. According to Detective Terry Sirks, Tyrone Hyia called police from a Howard Johnsons motel room claiming that his wife had just shot herself. When police arrived, the police found Michelle dead from a single gunshot wound to the head.
Detective Sirks did not say what evidence lead them to the conclusion that N6ZUM was a murder victim, but N7ZNM was taken into custody at the scene.

DXCC DELETIONS

In DX, the ARRL Awards Committee has voted unanimously to accept a recommendation of its DX Advisory Committee to add the former Yugoslav republic of Macedonia for country credit. This, for contacts made September 8th 1991. This change is based the criteria of a change in Government. At the same time the committee also voted unanimously to delete Czechoslovakia effective 1 January 1993. Contacts made December 31, 1992 and before still count for this now deleted country.
Replacing Czechoslovakia are the Czech Republic and the Slovak Republic. The DXCC Desk will accept QSL cards for these three new countries starting June 1st, 1993. QSL cards received at the DXCC Desk before that date will be returned without action.

*****
YHOTY

A reminder from the Westlink Report newsletter. It says that its 1993 Young Ham of the Year Award will be presented at the Huntsville Hamfest and ARRL National Convention in Huntsville,

Alabama the weekend of August 14th and 15th.
The Westlink Report Young Ham of the Year is a person who in the view of the judges best epitomizes the accomplishments of youth in amateur radio. Achievements can be in any area of endeavour associated to the hobby service. To qualify, a nominee must be 18 years of age or younger, be attending an accredited school or place of learning and must hold any class of valid United States amateur license. Cutoff date for nominations is June 30th. For a nominating form please send an S.A.S.E. to the 1993 Westlink Report Young Ham of the Year, 28197 Robin Avenue, Saugus, CA 91350.

*****
UK SCANNER STING

From the other side of the Atlantic comes word of a rather unique sting against scanner radio enthusiasts. Police in Warrington, England fed up with people listening to their 2-way communications decided to broadcast a message about a crashed flying saucer. They gave details were to find it and also warned that the object was radio-active and shouldn't be approached. In almost no time at all, five eavesdroppers which arrived. All were expecting to see little men from outer space. Instead they saw big men in uniforms who told them that they were under arrest. Sources in the United Kingdom say that they will all be prosecuted for telecommunication offenses.
While scanners radios are widely available in the England, it is against the law to act on messages received, or pass them on to other people.

> 2) Put a 40m rotatable trapped dipole parallel to the boom above or below
> separated by about 5 feet.

I hope I didn't butcher that too badly.
I had a 120' tower with a LARGE 6 -element (KT34XA) tribander about 2
feet above the tower top, and a 40 meter (90 degrees off-set) about 8
feet above. The offset *WAS* important, because the third harmonic
relationship of 40 to 15 *will* detune the tribander performance if
the elements were in the same plane. I tried and measured some
considerable problems, and climbed back up and tried the 90 degree
solution and was VERY happy.

By using 6061 Alloy Aluminum tubing, schedule 80, thick wall (.250)
for masting, I had about 16 feet of mast above the tower top. A VERY
heavy wind bent the top stick of tower and left a very slight warp in
the mast! It was worth the bux and still is in service, though not
with same tower of wind loads...subdivisions and CCRs, don'tcha know ;^)

Whole installation worked well.

So, why not use the boom of your tribander as PART of the 40 dipole?
It would not be too difficult to modify and adapt, and would get rid
of one of your concerns.

> 2nd question
> How far above the A4 10-15-20 tribander should the A3 17-12m antenna be?
I'd go with Cushcraft on that. Don't know enough from personal
experience to answer you.

> Should it also be rotated 90 degrees to the A4
Nope. No need. The reason for the 90 degree rotation of 40 and
tribander is to prevent third harmonic interaction of one to the
other. No such relationship exists for 10-15-20 and 17-12

> It would be nice to be able to model these
Yes, but it would be a huge amount of work. I can certainly understand
your concern, and your reluctance to spend money first and find it

doesn't work later are good defenses against doing a silly thing.

Perhaps, you could tell Cushcraft of your concern and suggest that you will take your business elsewhere since they seem unable or willing to help you...other antenna manufacturers -- or even homebrew -- are real good alternatives...

For what it is worth:

Why is it that (for the most part) Hams can keep the talk clean over the air, but when posting to the news groups, they loose control (even if it is vailed by code). I am not a goody-two-shoes, but the random foul language makes providing this newsgroup via packet extremely difficult. Aside from showing over the air what kind of person you are, it really is not neccessary.

I request that all of us think about how we post as well as what we post.

VK2SG RTTY DX Notes, 30 April
VK2SG RTTY DX Notes for week ending 30 April 1993 (BID RTDX0430)

While over 35,000 hams all over the world were at Dayton, conditions
picked up for a lively week of DX for those who remained at home. The
great news is that Syd, VK2SG was scheduled to return home this week,
after 3-1/2 months in hospitals. Cheers to you, Syd old chap!

Thanks this week go to CE3GDN, DJ3IW and the Central Europe DX
Cluster, I5FLN, KE6XJ, N5PSI, VK2EG, VP8CIL, WA1MPB, WB2CJL, ZS5S, and
the NJ0M Node of the Twin Cities DX Packet Cluster Network.

1761. Re: Icom Ic229h - questions

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-01 21:02:17 UTC
From: bat@gdstech.GRUMMAN.COM
Message-ID: <BAT.93May1160218@gdstech.GRUMMAN.COM>
Source record: 282380

I have had a 229H for a few years, and I love the radio.
I pull it from my car every nite (this is new york), and use
it on the bench. It has operated fine at 9 volts from a defective
supply (stayed right on frequency). Also, I get great reports
on the audio. Only problem was low audio when I first got it. I
called Icom, and they told me to change the electret's zener diode
to a higher value. This worked fine, cost me 89 cents and 10
minutes time. A great radio. -pat

1762. Re: Sattelite descramblers? (was Re: Cable TV Descrambler Sources?)

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-01 21:23:57 UTC
From: dleon@seas.smu.edu
Message-ID: <1993May1.212357.2409@seas.smu.edu>
Source record: 282382
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc,rec.video.cable-tv

And then one day Uri Blumenthal said:
"Could somebody please explain to a poor ignoramus, what's the
difference between scrambling of cable signals, and sattelite
TV signals? Is Sattelite TV Descrabling equipment different
from their cable TV "brother"?

And what are the sources for it?"

The majority of signals which are scrambled on satellite employ digital scrambling of the audio using DES. Most cablcos do not scramble the audio. Both systems usually use analogue scrambling methods for the video. Since analogue video descrambling is rather easy, several methods have cropped up to defeat it. Analogue video scrambling is usually accomplished by removing the horizontal and vertical sync pulses from the signal. The result is that the television set cannot "lock" on the signal. Several companies produce a box that will produce such signals, which allow your TV to lock on a signal, therby producing a descrambled pic. For cable systems, you are set, since the audio is in the clear. On satellite, however, the audio is still digitally encoded using the DES "key". Without the proper DES key, descrambling the audio is VERY difficult. Therefore, you can watch the descrambled programming, but it will be silent movies. As for sources, you may wish to pick up a copy of Popular Electronics or Satellite Watch News and look at the advertisements.

1763. Heil BM 5/10 boomset?

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-01 21:45:38 UTC
From: wier@merlin.etsu.edu
Message-ID: <wier-010593163625@csci-wiermac.etsu.edu>
Source record: 282381

I'm considering buying a BM 5 or BM 10 headphone / boom
mike combo made by Heil for use in a mobile application
with my ICOM 735. This is mainly due to the fact that
I use a jeep offroad and REALLY need to keep both hands
on the wheel when trying to bounce along in 4 wheel drive,
shift, clutch, accelerator, brake, and tune! (could use a couple
more hands and 2 more feet :-)

I gather the HC5 element would be what I'd want - but am interested
to know if the headset is comfortable enough to wear for hours
on end (or does it end up re-shaping your ear?).

Please check with your local frequency coordinator concerning the ATV useage in the 902-928 MHz amateur radio spectrum. In California we are sharing the band with Pacific Teletrak an automatic vehicle locating service. The AVL services are primary users and the amateur service shall cause no interference to that service. There may be a 902 chart for SoCal in the new ARRL repeater Directory. I do beleive there is a 6Mhz wide ATV channel in the middle of 902-928 MHZ.

The Amateur Radio service is secondary in this band, just above the part 15 one watt transmitters. I think we amateurs will be using this spectrum in the spread spectrum mode more and more as the environment is quite suitable.

>How about your local ham repeater? There are
>certainly some sorts of damages, but what are they and how large can
>they reasonably be?

Oh, how about rendering a $2000 (or usually more) piece of radio equipment temporarily useless. (Or permanantly unreliable as long as the jamming continues. (months and years))

> Judges do not award damages for mere annoyance.

Annoyance, no... harassment yes.

>The second point is that you CANNOT win a suit without "one shred of
>evidence". You need reasonable, well documented evidence to win any case.

I believe swarn testimony from a group of DFers (along with a good explanation of radio direction finding and it's accuracy) would suffice.

>The third point is that, even if the other side does not show and you
>win by "default", you MUST PROVE your damages to the judge. You must
>prove at least a reasonable case to get damages awarded.

Wrong! You only have to prove compensatory damages. The judge can determine what the proper amount of punitive damages would be. If the jammer messes with a repeater that frequently handles emergency traffic (law patches especially) or worse, jams an emergency communication, you could EASILY argue that the jammer has caused (and could cause more) damage to the community. Punitive damages would follow.

>Next, it is often hard to COLLECT on a judgment! Getting a judgment
>is often the easy part. If the jammer is poor or does not care, the
>collection is really rough.

Difficult, but not impossible. After the creap shows that he doesn't want to pay, make the moves to garnish his wages and/or get a lien on his house (or radios).

>Frivolous suits are not a serious problem in my corner of the world,
>but certainly can occasionally be a pain. Don't bring one, please.

Repeater jamming is NOT a frivolous problem.

>I WOULD encourage you to think along the lines of a civil suit for
>multiple intentional jamming.

Or, how about this... sue the jammer for theft of services (the repeater). Carefully draw up a statement to be provided to dues payers (and other users) saying that the dues to "use the repeater for legitimate comm" is $XX.00 and to use the repeater to jam communications or other nasty things is $10,000.00. Anyone who wants to pay $10,000 to jam the repeater most certainly could buy his own and mess with it.

This is a different audience from the airwaves. There are times when it is necessary to convey extremely strong feelings, and, since facial expressions and tone of voice are lost over this medium, something else must be substituted. The rest of the net does not care about such things; I fail to understand why the ham radio groups should be different from, say, comp.os.os2.misc (aside from the obvious difference in subject matter).

Anyone who gateways automatically from the net to packet is a lunatic, anyway; language or no, there are other considerations which make such a gateway extremely unwise in the current regulatory environment.

1769. Info Requested About VITA

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-02 04:12:42 UTC
From: lyndon@unbc.edu
Message-ID: <1rvhnq$ain@unbc.edu>
Source record: 282389
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.packet

I am interested in obtaining information about VITA (Volunteers in Technical Assistance?) and their use of LEO satellites. I understand they have some sort of packet mail forwarding system located on one of the amateur satellites. I need to know what bird it's located on, frequencies, protocols, etc. Any information at all would be appreciated. Thanks.

> W2A. Could anyone please send me or post more information about this.

I've got a diagram that shows how to do it but it's not real good at labeling pin numbers so I'll try to describe it.

One word of warning. The parts involved here are surface mount and are very tiny. It's very easy to screw something up and loose UHF receive.

You need to open up the the UHF unit inside the radio and look at the component side of the board.

Q7 is a 5 pin surface mount IC that is near the edge of the board, about a half an inch from the URF unit. There are 2 pins on the side nearest the URF unit. You must lift the one nearest the edge of the board. Most of the people that I know who've tried this have broken off the IC leg or lifted the pad from the circuit board.

I don't see Q7 in the schematic, I think it's D7 in there.

Q3 is a surface mount transistor thats near the center of the board about three quarters of an inch from the URF unit.

Once you've lifted the pin on Q7 you attach the cathode end of a 1N34 diode to it. The anode end of the diode goes to the pin on Q3 that only has one pin on that side.

It sounds easy but Q7 is in a very tight corner. Here's an attempt at diagramming the locations. The "<-" mark where the connections should be.

```

In <1993May1.231431.24845@mnemosyne.cs.du.edu> mwgordon@nyx.cs.du.edu (Mike Gordon) writes:

>In article <2BE1B201.25794@ics.uci.edu> turner@safety.ics.uci.edu (Clark Savage Turner) writes:
>>How about your local ham repeater? There are
>>certainly some sorts of damages, but what are they and how large can
>>they reasonably be?

> Oh, how about rendering a $2000 (or usually more) piece of radio equipment
>temporarily useless. (Or permanantly unreliable as long as the jamming
>continues. (months and years))

This is a beginning, but you have to show how someone lost that money, exactly what it was worth, and how the fellow caused it. I am NOT suggesting it cannot be done, just that you need to think it over carefully and prepare a very CLEAR case for a judge that may never have heard of ham radio and repeaters. And there may be an opposing attorney there to say that ham radio cannot involve business communications....and the judge may wonder what the damages are if this is a hobby. You will have to present a good case to show the judge exactly what the law demands in your case - with good, hard, organized evidence. If you have a lot of money and time, hire someone to investigate and prepare....otherwise, you will have to think along these lines and educate your attorney (and/or the judge) about it all. This is a serious undertaking, not accomplished by speculation or stating what we already know as hams who have been harassed by a jammer. We have to convince an impartial judge and possibly overcome the arguments of opposing counsel who will be doing his (or her) homework on how our case is weak.

>> Judges do not award damages for mere annoyance.

> Annoyance, no... harassment yes.

Perhaps you can define the difference in your terms. I am not sure what you are arguing with. My point was (see the context you pulled out) that you need to prove some sort of damages to have a case. You cannot go in to a judge and just say your neighbor bothers you (harassment?) and get a damage award. You cannot even get damages from purely emotional injury without some sort of objective "impact" (generally seen as a physical impact, evidenced by physical/monetary damages) except in few states and under very limited circumstances. The point, again: you need to suffer damages to get a money damage award. (If you are talking about an injunction, you are in another realm of law, and it presents its own unique problems.)

>>The second point is that you CANNOT win a suit without "one shred of
>>evidence". You need reasonable, well documented evidence to win any case.

> I believe swarn testimony from a group of DFers (along with a good
>explanation of radio direction finding and it's accuracy) would suffice.

Perhaps you have practiced law for longer than I have, but I don't
believe that I would personally present such a case to a judge without some
good malpractice insurance. Again, this is serious, if you want to
take a guy to Court, you need to take it really seriously, and to
present a very good, organized case to the judge. You need to find
out how to qualify "experts" for testimony and who the best ones are
to bring to Court. They could well be the local DF'ing group, but their
qualifications and explanations need to be well prepared under the law
of the particular state. I say this because
I have seen people lose cases, over and over (and even though they
were probably "right") because of poorly conceived cases that they
were so confident about that they did not do the groundwork to present
a good case to a judge who may know nothing about the subject matter.

>>The third point is that, even if the other side does not show and you
>>win by "default", you MUST PROVE your damages to the judge. You must
>>prove at least a reasonable case to get damages awarded.

> Wrong! You only have to prove compensatory damages. The judge
>can determine what the proper amount of punitive damages would be. If
>the jammer messes with a repeater that frequently handles emergency
>traffic (law patches especially) or worse, jams an emergency communication,
>you could EASILY argue that the jammer has caused (and could cause more)
>damage to the community. Punitive damages would follow.

Again, maybe you are practicing far more than I have, especially in
this arena, and, if you have, I will stand corrected. However, you
seem to say that I am wrong in claiming that one must prove "damages"
even if one wins by default, but then you say one must only prove
"compensatory damages". Excuse me, but I fail to see the problem.

AND, trying to get punitive damages in a tort case such as damages
from jamming sounds pretty hard to me (not impossible, but darned
hard.) Punitive damages are awarded reluctantly by the Courts I have
been in, and only in the most awful of circumstances, and only where
they would make a difference. You speak of EASY arguments about
repeaters that handle emergency patches. NOT. The evidence you
present to the Court would need to be airtight, and you might note
that jamming emergency communications is probably a criminal matter
(esp under Federal law). At any rate, this is not an easy case.
Clearly, it is something I would pursue, but most carefully and
thoughtfully. None of this would be easy.

>>Next, it is often hard to COLLECT on a judgment! Getting a judgment
>>is often the easy part. If the jammer is poor or does not care, the
>>collection is really rough.

> Difficult, but not impossible. After the creap shows that he doesn't
>want to pay, make the moves to garnish his wages and/or get a lien on his
>house (or radios).
>

Again, I have been doing this for years. The sorts I have known who
jam repeaters are judgment proof anyway, and garnishment....etc would
be of no use. However, if the guy owns a house or is a regular member
of the community, you got a good chance if you can take the time and
energy (and maybe money) to investigate and find this stuff out,
then execute on the judgment.

>>Frivolous suits are not a serious problem in my corner of the world,
>>but certainly can occasionally be a pain. Don't bring one, please.

> Repeater jamming is NOT a frivolous problem.

How the heck did you think I implied that???? Again, you seen to
have deleted my context from the article, and you also seem to have
deleted my context from your mind. Please re-boot.

>>I WOULD encourage you to think along the lines of a civil suit for
>>multiple intentional jamming.

> Or, how about this... sue the jammer for theft of services (the
>repeater). Carefully draw up a statement to be provided to dues payers
>(and other users) saying that the dues to "use the repeater for
>legitimate comm" is $XX.00 and to use the repeater to jam communications
>or other nasty things is $10,000.00. Anyone who wants to pay $10,000 to
>jam the repeater most certainly could buy his own and mess with it.

Well, Mike, your theft of services is basically the name of a criminal
theory. We have been talking civil action here.
Your point is well taken, though, you would want to hit a
jammer for tying up the repeater resources ($$) for some amount of time
when he (she) had no legal right or privilege to do so. Your idea about
a statement is "cute", but would not help you in the Court case against
an alleged jammer, unless the jammer was a member of the system and had
signed the agreement (unlikely).

I just want to reiterate, again, that this is a serious matter. Jamming
is a serious problem, and we need to address it. However, if we are to
address it with the Civil Law, we need to do it properly, and not go
off thinking that there are easy arguments and that we have all truth
and light overwhelmingly on our side. This can produce lost opportunities
to do some important work in the war on jammers. Legal action is not
something to be taken lightly or done in an armchair quarterbacking
manner. Legal action is an important tool to be used carefully and
wisely and only when it is truly called for. (Don't I wish the FCC
would get some sudden funding for enforcement activities....then we
wouldn't have this discussion!)

72 73, and I feel like any more discussion along the lines of the
above should be off-line with me. Feel free to write.

Clark

First off, congratulations! I hope you'll get as much enjoyment out of ham radio as I have, Scott!

Unfortunately, the answer to your question is going to vary from place to place. But usually it consists of attending a one-day or one-evening class in sever weather recognition and reporting. Depending on the population and interest in your area, these are fairly often or can be found if you're willing to drive to a larger city.

The best way to get hooked up is to contact your local club, if there is one, and speak with the club Emergency Coordinator. These folks usually know the people (or may actually _be_ the people) who coordinate hams with the weather service and emergency response organizations for your area. Ususally, all you have to say is that you're interested!

If there's not a club in your area, you may want to contact the ARRL Section Emergency Coordinator (SEC) for your area. They will be more than happy to hook you up with the right folks! You can locate your SEC by checking a current issue of QST.

I've been hooked up with the emergency groups in three different metropolitan areas, and no two have been organized the same. But they were all structured in a fashion that well-suited the communities they worked in. For weather spotting, the "lie of the land" has a lot to do with that.

Again, congratulations Scott! And thanks for taking an interest in weather spotting. It's probably one of our most-visible public service functions.

Cheerio!

> N2MXX

Dave,
The mod actually changes the way the UHF receiver switches front-ends. There is a front end section for the ham band with good filtering for the 440-450 range. When you tune out of band, there is a switching network that bypasses this tuned front end and gives you a very broad banded front end. In my area (Kansas City), when the receiver was tuned out of band and the broad band front end was activated, the unit acted very poorly bacause of all the RF it was seeing at once. I was getting cellular calls in the 450.050 range, and senitivity appeared to drop.

Icom FAXed by a mod sheet, which involved cutting a trace on the UHF receive board and soldering a diode in place. This mod basically keeps the tuned ham receive section on at all times. If you're not wanting to receive too far off the ham bands (like up to 460) this greatly improves the selectivity of the receive section.

Due to the drawings necessary to show where to cut the trace, the mod isn't reproducable here on the net. Just give Icom a call and they should be able to FAX it to you too. By the way, I didn't even attempt the mod myself. I gave the stuff to a guy who does two-way work for a living and is used to this surface mount work.

Usually, and especially so in "small rural towns" the height limit for
BUILDINGS is a function of the fire fighting equipment limitations,
and has little or nothing to do with an antenna SUPPORT STRUCTURE,
which is what a tower is. In fact, I suspect that had the wording of
the request for a permit to construct an antenna support structure
been managed, the inspector would have granted the permit on the spot,
provided he figured your neighbors (*if* you had any close enough to
notice ;^) wouldn't scream and cry...causing him a problem.

By charcaterising you tower as a building, it made it fall within the
35 foot limit...

I sure hope you can get your tower sticks back...

> that would improve the selectivity of my HT?

Sure. REMOVE the DC to Daylight mods that make the broad front-end
even worse, disconnect your outside antenna (your HT was designed to
use the inefficient rubber duck! ;^) and then hope for a reduction in
other RF to drive your TH78 nuts! ;^) ;^)

These comments are NOT meant as a flame, but while an HT makes for a
neato first rig, there *ARE* limitations to them, and there are
reasons why people use MOBILE rigs in their cars with outside
antennas. Sadly, it isn't really possible to advise everyone BEFORE
they buy the neato HT... but, when you can, use the HT as it was
designed, and add a good mobile rig (with a quick disconnect mobile
mount so you can use it in the house as well) and enjoy the hobby

Well, How about using a TEXAS BUG CATCHER (the Henry Allen WB5TYD
version) and have a REAL antenna?

After looking at all the options I could find for a mobile HF antenna,
I settled on the design Henry has made famous for a variety of
reasons, not the least of which is it can be tuned for ANY frequency
from 3.5Mhz to 30Mhz (and even to 1.8Mhz, *IF* you spring for the
humongeous inductor! ;^)

Use as long a bottom pole below the inductor as you can, select the
huge inductor because it works a helluva lot better, put the mega-size
capacity hat on, and use the full length 8=foot stainless whip. That
will get you some really serious RF out. I am running such an antenna
(with "only" the 54 inch lower stick) on my car, and it is better than
I even imagined it would be... 'course I have to stop and disconnect
the top before driving into the garage, and I do whack a ton of tree
limbs on rural roads, but I am hauling in DX and having a ball.

Research just indicated Henry's approach was far superior to the
alternatives...and it cost more too, but what a quality job!

(Nope, I am NOT an employee of GLA Systems -- Henry's Company) just a
VERY satisfied customer.

Well, Bill, I'd like to go you one better and ask that each manufacturer
stick with a standard connector! *THAT* would be an improvement...
then we could go for an "industry" standard...

Given that you like standards...you must not use the DOS platform,
huh? ;^) ;^)

How is Suing a Jammer technically different from suing someone over a barking dog? People file such suits all the time.

If nothing else you should be able to get a restraining order from the judge to prevent the jammer from repeating his/her acts. While getting $10,000 from the jammers wallet may be very satisfying, getting them to stop is what you are really after.

Sound reasonable?

Did he say anything about code? No he didn't. Matter of fact, he's not a code wiz himself. He has a similar problem to the guy who wrote the message that got this started, besides working a fulltime job, teaching a class at a local college one night a week, and taking classes at night, Mr. Deignan has trouble finding time to practice the code, but he advances along just fine. Just one more element to his Extra. :)

Yes in fact, I am. Judging by the letters of support I've gotten for my stance on dropping the code requirement I'd say there are alot of hams opposed to messing with the structure. I just don't want to see the HF bands become a free-for-all if all of a sudden, people who haven't put half the effort into it that I have, get access to the same spectrum. That doesn't make me a happy camper.

Well, I've had experience with the Alince DJ-580T and the Kenwood
TH-78A, and other Yaesu HT's.

The Kenwoods are great for all the bells and whistles like alpha paging
between Kenwood units and things like that. The Yaesu FT-470 is a nice
rugged little box. The Alinco is too... I dropped one about 5 feet onto
a concrete floor and it survived.

Features you'll want though:

DTMF Paging and DTSS Encode/Decode (Most HT's have this too)
CTCSS Encode, decode is sort of useful but not req. Besides, most HT's
come with decode built in.
Lots of memories

That's roughly it though... I know the Yaesu FT-530 has dual in-band
receive which is kind of nice.

Good luck.

It appears that I have clumsily blown the luminescent display in our club station's Icom IC-720 when I tried to cram all those wires and boards back together after trying to fix another problem. Can anyone tell me how these displays work? I'd like to be sure that it is bad before ordering another one, assuming that I can still get another one. I'd also like to fill that hole in my electronics knowledge.

STS-55/SAREX Mission Proceeding Well; SAREX PACKET ROBOT IN OPERATION

The Shuttle Columbia lifted-off this past week with seven astronauts that included 5 licensed radio amateurs aboard along with the Shuttle Amateur Radio Experiment (SAREX). The Shuttle Columbia made a "picture-perfect" lifted-off on 26-APR-93 at 14:50 UTC on its 8 day and 22 hour science mission. This mission will utilize a SAREX payload configuration with 2M voice and packet combination. According to Frank Bauer (KA3HDO), the crew of STS-55 has been given permission to turn on the packet radio "robot" for continuous operations at this point in the STS-55 mission. The following are the uplink and downlink frequencies for the packet station that will use the station call of W5RRR-1:

Downlink: 145.550 MHz
Uplink: 144.499 MHz

Please listen on the downlink frequency for Shuttle packet activity BEFORE sending uplink packets.

The following are the latest keplerian elements for the STS-55/SAREX mission:

STS-55
1 22640U 93 27 A 93120.62020368 0.00044855 00000-0 12708-3 0 131

AMSAT OPS NET SCHEDULE

HR AMSAT NEWS SERVICE BULLETIN 121.03 FROM AMSAT HQ
SILVER SPRING, MD MAY 1, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-121.03

AMSAT Operations Net Schedule

AMSAT Operations Nets are planned for the following times. Mode B Nets
are conducted on AO-13 on a downlink frequency of 145.950 MHz and Mode J/L
on a downlink of 435.970 MHz.

Date UTC Mode Phs NCS Alt NCS

9-May-93 0030 B 65 W5IU WA5ZIB
15-May-93 2030 B 148 WJ9F VE2LVC
23-May-93 0030 B 156 VE2LVC W9ODI

Any stations with information on current events would be most welcome.
Also, those interested in discussing technical issues or who have questions
about any particular aspect of OSCAR statellite operations are encouraged
to join the OPS Nets. In the unlikely event that either the Net Control
Station (NCS) or the alternate do not call on frequency, any participant is
invited to act as the NCS.

****

Slow Scan Television on AO-13

SSTV sessions will be held on Saturdays and Sundays UTC:

Mode J Downlink 435.980 MHz
Mode B after J Downlink 145.960 MHz

OPS NETS will take priority, look for SSTV activity immediately after the
net. SSTVer's are invited to join the Net to make schedules at other
times if desired.

PHASE-3D MODE-B DISCUSSION

HR AMSAT NEWS SERVICE BULLETIN 121.04 FROM AMSAT HQ
SILVER SPRING, MD MAY 1, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-121.04

AMSAT-NA President Clarifies Phase-3D Mode-B Issue

Bill Tynan (W3XO), AMSAT-NA President, reports that a 2M downlink trans-
mitter remains in the suite of equipment planed for the Phase-3D satellite
However, a group or individual willing and qualified to design and build a
suitable transmitter has yet to be identified.

Recent reports, including an 24-APR-93 AMSAT News Service (ANS) bulletin item
quoted Freddie de Guchteneire (ON6UG), the IARU Satellite Frequency Coordinator,
reporting on the a meeting recently held in Munich, in which no mention was
made of 2M downlink frequencies. In the Phase-3D architecture, involving
separate receivers and transmitters rather than dedicated transponders, a
70CM receiver connected through the IF matrix to a 2M transmitter would
form the equivalent of what we know as Mode-B on Oscars 10 and 13.

Despite these reports, ANS has since learned that the International Phase 3-D Development Team has made no official decision to eliminate the 2M downlink from the satellite. According to Tynan, "what was covered at the Munich meeting represented technical discussions regarding equipment for which specific responsibilities had been assigned. Since a specific builder for a 2M transmitter has not yet be identified, there was thus no 2M frequencies were mentioned."

"The rest of the story", says Tynan, "is that due to the extreme over-crowding and interference on the 2M band, especially in highly populated parts of the world such as Europe and the Far East, there is less interest in a Mode-B style frequency combination by amateurs in those areas than is true in the U.S. and less populated areas." Bill goes on to note that, "for this reason, design, construction and testing of a 2M downlink transmitter for Phase-3D has been the responsibility of those of us in North America for some time."

He continued, saying that "a slot in the IF matrix for a 2M transmitter remains and high gain 2M antennas are being designed and tested on an antenna range."

However, Bill stresses that, "no individual or group has yet stepped forward, either from North America, or elsewhere, with a firm commitment to take on the task of designing, fabricating and testing a 2M transmitter capable of flying on Phase-3D." Nevertheless, he continues, "we continue to seek a qualified builder. Several attractive prospects presented themselves at the recently completed Dayton Hamvention. The Phase 3D Design Team is in the process of establishing appropriate criteria for evaluating the capability and commitment of any potential 2M construction groups or individuals." Bill emphasized, however, that, "flight hardware is needed in 600 days so, unless a suitable group or individual can be identified within the next few weeks, there will not be a 2M downlink in Phase-3D. It's pretty hard to have a downlink, if you don't have a transmitter" he commented.

"The ball is clearly in our court to produce", said Tynan. "I remain optimistic that a qualified builder will step forward in time to insure one of our most popular modes will be available on the new satellite." Tynan concluded his remarks by saying that "he is ready and eager to listen to any group or individual, with solid state VHF RF design experience willing to take on this rather demanding task. But time is fast running out", he added.

[The AMSAT News Service (ANS) would like to thank Keith Baker (KB1SF) of the Phase-3D Development Team for the information that went into this bulletin item.]

Weekly OSCAR Status Reports: 01-MAY-93

AO-10: AMSAT-OSCAR-10 is still operational in Mode-B. The telemetry beacon is now a long steady tone. However, despite good signals from the Mode-B transponder, there are very few stations using the transponder. [WD4AHZ]

AO-21: The Dual-Hop (DoHop) experiments are planned from AO-21 through the RS-10 bird on 16-MAY-93 beginning at 16:22:12 UTC and closing at 16:27:32 UTC. Stations wishing to participate should uplink on CW or Lower Side Band (LSB) on AO-21 between 435.100 and 435.110 MHz and call "CQ DoHop de" your call sign. If you are not taking part in the DoHop experiments, you are asked to monitor the RS-10 signals on Mode-A. Signal reports will be appreciated. In your signal reports, please note the time in UTC, frequency, and the location of the station heard. Please send your reports to W2RS @ WA2SNA.#NJ.USA.NA or to G0NKA @ GB7DTX.GBR.EU. [G0NKA]

FO-20: The FO-20 Ground Control Station, JJ1ZUT, announced that FO-20's operational schedule during the month of May will be as follows:

Analog Mode Operation(in UTC):
May 12 11:52 <---> May 13 10:20
May 19 10:20 <---> May 20 10:40
May 26 10:50 <---> May 27 11:08

At all other times, the Mode-J Bulletin Board System (BBS) will be in operation. [JJ1WTK/3]

AO-16: Operating normally. [WH6I]

LO-19: Operating normally. [WH6I]

UO-22: Operating normally. [WH6I]

KO-23: Operating normally. Lots of new earth images. [WH6I]

AO-13: Transponder Change and attitude adjustment:
M QST *** AO-13 TRANSPONDER SCHEDULE *** 1993 May 10 - May 31
Mode-B : MA 0 to MA 180 !
Mode-S : MA 180 to MA 190 !<- S transponder; B Transponder. is OFF!
Mode-LS : MA 190 to MA 195 !<- S beacon + L Transponder
Mode-JL : MA 195 to MA 210 ! Blon/Blat 210/0
Mode-B : MA 210 to MA 256 !
Omnis : MA 250 to MA 60 ! Move to attitude 120/0, May 31
Please don't uplink to Mode-B, MA 180-190, as this interferes with Mode-S. [G3RUH/DB2OS/VK5AGR]

RS-12: G3IOR reports MANY fantastic "sub-horizon" DX contacts he has made between his QTH and JA stations, W4's, W6's, and UA stations. RS-12 is in Mode-K which means its uplink is in the 15M band and the downlink is in the 10M band. [G3IOR]

MIR: G3IOR reports that the DL2MDE "digital-microphone" was in operation this week transmitting a message of "greetings" to the STS-55 astronauts on a downlink frequency of 145.550 MHz. G3IOR says expect to hear the voice message once every 3 minutes. [G3IOR]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

SB SAT @ AMSAT $ANS-121.06
MORE ARSENE INFORMATION

HR AMSAT NEWS SERVICE BULLETIN 121.06 FROM AMSAT HQ
SILVER SPRING, MD MAY 1, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-121.06

More ARSENE Satellite Information In Preparation For The 11-MAY-93 Launch

The French Amateur Radio satellite Arsene is now scheduled for launch from Kourou French Guiana at 00:52 UTC 11-MAY-93. Following the launch, five to six days will be necessary to check out the new satellite before releasing it for general amateur use. Everyone is asked to please refrain from transmitting to Arsene prior to its release so that the control team has certified it open for use.

Information previously received by AMSAT-NA provides the following glimpse into what we may expect from ARSENE.

ARSENE will be in a very interesting, somewhat elliptical equatorial orbit with an apogee of 36,055 KM and a perigee of 19,629 KM. For those who would like to see what coverage of the new satellite will be like, here is a representative set of orbital elements. They will not provide specific times of AOS and LOS, but will illustrate coverage and length of access times.

Epoch Time 92 366.00000
Epoch Rev 1
Mean Anomaly 0.0000000
Mean Motion 1.37143000
Inclination 0
Eccentricity 0.240000
Argument of Perigee 0.000000
R.A.A.N. 0.000000

ARSENE will be primarily a digital satellite but will not contain a BBS. It will, however, be an orbiting digipeater, utilizing standard 1200 baud AFSK on both uplinks and downlinks. Although, it is primarily intended for

digital operation, it is understood that some analog work may be possible through the 16 KHz wide Mode-S Band downlink.

Frequencies will be:

Uplinks: 435.050, 435.100 and 435.150 MHz
Downlinks: 145.975 and 2446.500 MHz

The 435.050 MHz and 435.150 MHz uplinks will be coupled to the 145.975 MHz downlink, while the 435.100 uplink will be pared with the 2446.500 MHz S Band downlink.

[The ANS would like to thank Bernard Pidoux (F6BVP), Vice President for International Public Relations for the "Amateur Radio Club of Space (RACE)" for the information which went into this bulletin item.]

This just shows how inordinately ignorant, boorish, and
"red neckish" you. If your vocabulary is limited to what you
send in code, you rank among those people who have more than fully
demonstrated why there are so many problems on HF. Simple courtesy
would go a long way to cleaning up Ham radio. Perhaps if the FCC
pulled your license it would be a start.

SB DX @ ALLBBS $OPDX.109
Ohio/Penn DX Bulletin No. 109

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 109
BID: $OPDX.109
May 3, 1993
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, NCDXF, DF4RD, FD1NLY, IK1HLG, IK1QBT, OH7MA, AD1C, KE2LJ, NT2X, K4CEF & Southeastern Cluster Group WB5CRG, K8JLF, KQ8M and K8YSE for the following DX information.

3A, MONACO. Frank, IK1HLG, and Tony, IK1QBT, will be active as 3A/IK1HLG/M from May 11 thru 14. Operations will be mostly CW (by Tony) and SSB (by Frank). The mobile station will be using a 100 watts and a vertical antenna for 10/15/20/40/80 meters. QSL to IK1HLG, Imbesi Francesco, P.O. Box 155, 17025 Loano SV, Italy.

44TH ANNUAL ARMED FORCES DAY CELEBRATION. Memebers of the Northern Ohio DX Association will again operate U.S. Army Radio Station "WAR" at Ft. Detrick Maryland on 15 May. "WAR" will transmit on 4018.5 LSB, 6998.5 CW, 13992.5 CW, 14403.5 USB & 20995.5 USB. They will announce their listening frequency in the amateur band. Operation will commence at 1400z 15 May and conclude at 0200z 16 May. They will especially be listening for DX this year and hope to work many Europeans that may not have been aware of this test in previous years. All contacts will be QSL'ed direct to the callbook address. More on this in the next issue.

4U8ITU, ITU HQ, GENEVA. This special call sign will be used by two separate Italian groups in the month of May. Both groups will be using different QSL routes, so listen to operator for the route. Operators I1RB and I1RBJ will be using the QSL route of I1RBJ. The operator Luc, I1YRL, will be using his CBA.

5A, LIBYA (UPDATE). Romeo Stepanenko, 3W3RR/AH0M, sent out another news release on April 28th about the upcoming 5A DXpedition. The following is a edited summary: Preparations still continue for the DXpedition but as of the end of April not enough funds have been collected. Therefore, the organizers of the operation were forced to postpone its start and continue with raising funds. The evaluated sum needed for the DXpedition is $29,800 and the total accumulated funds are approximately $11,200.

DXpedition plan: The DXpedition team will consist of four experienced operators. Few of the operators have already obtained Libyan visas, others will be ready shortly. Operators will come from Bulgaria, Ukraine and Russia. The team will arrive in Cairo by plane, rent a jeep, buy food, generators and fuel (cheaper than in Libya) and then will drive along the coast to the border with 5A. They were given two weeks to operate and after completion of the operation, all equipment and antennas would be left behind. Their return trip takes them back to Cairo the same way and so they can fly back to their respective homes. Upon completion of the operation, they expect to begin mailing cards the next day after returning home.
Romeo will be staying in NYC until the end of the week (about May 7th), then he will leave for Spain, and then return to Turkey to begin loading equipment from there. Three element Yagi, supplied by INDEXA is already in Egypt awaiting transportation to Tripoli.
From Romeo: (Please note) Since all cards would be printed BEFORE the expedition commences, we must hear from all sponsors and receive their logos for the inclusion on the cards before May 6. If your organization is willing to help us, we'd like to ask you to forward the logo right away using the fax number below. Your support is needed as soon as possible so this DXpedition could begin. Kindly let us know if you are supporting this undertaking, even if it is going to take you some time to send in support.
Please contact Edward Kritsky, NT2X (718) 284-4493 fax/phone, or, contact Romeo directly in Brooklyn, NY at (718) 871-0361. Address all correspondence to: 5A DXpedition, c/o Edward Kritsky, P.O. Box 715, Brooklyn, NY 11230, USA

5X, UGANDA. Paul, WF5T, James, N3JCL and Jim KF3E are now all active. Paul and James are using 5X1XB and 5X1ZA, respectively. Jim has also been assign his own call of 5X5XX. Activity will continue until May 12th.

ERITREA. This former Italian colony has gained independence from Ethiopia after 99.8% of its people voted in favor of going their own way in a U.N. monitored referendum. The sole referendum question was: "Do you want independence from Ethiopia?" Eritrea, about the size of England, is north of Ethiopia and stretchs along the Red Sea from Sudan to Djibouti. They will formally come into existence on May 24th. Italy immediately became one of the first countries to officially recognize Eritrea. It was also reported that C-SPAN has stated (4/29): U.S. Dept of State established full diplomatic relations with Eritrea. Based on its referendum, the U.S. is to consider it as independent country effective April 27. An upcoming vote on Eritrea's DXCC country status by the DXAC should be just around the corner.

HA5BUS'S "WORLD BUS TOUR" CONTINUES! Imi, HA5HO, and crew continues their travels after being on the road for almost 3 years. Their history making trip stopped off at the Dayton HamVention. Many amateurs had a chance to take a guided tour thru this amazing bus with Imi. On a sad note, Imi expressed his disappointment on not being able to sign W#/HA5BUS. The bus left Dayton to travel to Columbus and as of May 2nd, the bus is in

Cleveland, Ohio. Where the bus is having some repair done on its water tank. The Northern Ohio DX Association will be hosting the operators at their monthly/dinner meeting. Their next stop will be to Buffalo. PLEASE, show these world-wide poineers of amateur radio plenty of hospitality if they visit your area.

IOTA NA-014, CAMPOBELLO ISLAND. Dick, KA2PHQ, will be traveling to Nova Scotia and plans to activate Campobello Island on May 1st. He plans to be active on some nets on 40/80 meters and on 14260 kHz. There is a chance he may travel to some other island in the area. QSL to CBA.

S2, BANGLADESH. JA4KFA has stated, starting May 1st, nine JA's will operate as S21ZZ and S21C for 6 days. They plan to operate on 160-2 meters, including the WARC bands. The will be NO RTTY.

T7, SAN MARINO. In celebration on the entrance of San Marino Republic into the Council of Europe, operators F6FQk, F6IFE, FB1NAN, FD1NLY and several T7s will activate T71CE from May 6th thru 10th. Activity will be on all bands, including the WARCs and on SSB/CW/RTTY. QSL via the bureau to F6FQK. (Each QSO will be confirmed by QSL card.)

TU, IVORY COAST. OH8SR still continues to be active as TU4SR until the end of May. Check the low end of 40 and 80 meters CW band starting around 0500z. QSL via OH8SR.

VK9, MELLISH REEF (UPDATE). The mid to late September DXpedition to Mellish Reef is still a go for a ten day operation. Operators include: VK4CRR, VK2BJL, VK2BEX, P29DX, V73C, WA4DAN, K5VT and G3WGV. The organizers have decided to use a big vessel instead of the "Banyandah" as first reported. The group has chartered the " Nina Q 1", which is a 63 foot twin masted schooner capable of carrying 6000 pounds of DXpedition gear. Five HF stations and one six meter station will be active around the clock. Activity will be on all bands 160-6 meters, including WARC bands and using CW/SSB/RTTY. All official documentation including DOTC license and landing permission has been received. The ARRL DXCC Desk has given preliminary approval pending completion of the DXpedition and receipt of travel documents and log extracts from the "Nina Q 1's" captain. The DXpedition's projected cost is $30,000 (U.S.), just $19,500 for the charter yacht alone. For donations, questions, or additional information requests can be directed to VK4CRR or WA4DAN. For Europe, contact G4DYO.

VP5, TURKS & CAICOS ISLANDS. Richard will be operating as VP5/WD5B from May 14-18. Operations will be on all bands and modes. QSL to Richard Duncan WD5B, 5 Troxell Lane, Conway, AR 72032. Note: Callbook address is NOT correct.

XW, LAOS. Several JA's operators, including JA1NUT, began operation on April 28th using the XW8KPL club station. They are apparently having trouble getting their own license. These difficulties will probably be resolved very soon and they plan to operate under their own callsign until May 5. In addition, JH1EVE, the main operator on this expedition,

plans to copy the existing XW8KPL logs and answer as many requests as he gets from those who never received a card from the native op. QSL to JH1EVE.
In addition, JA2EZD plans to operate as XW2A starting May 1 and JA6LDD plans to operate as XW6X. This operation is planned for 8 days.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and operates Group 3 FAX Service Class 2 (EIA/TIA 592) only. Use only the dates and times specified. FAX Service Class 1 (EIA/TIA 578) is availble upon request by leaving a message to the Sysop on BARF-80 BBS. The FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

1797. Yaesu FT5100 mods requested and comments provided

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-03 00:47:42 UTC
From: jab0684@ucs.usl.edu
Message-ID: <1993May3.004742.22776@usl.edu>
Source record: 282409

Hello all, I'm the proud owner of a new yaesu ft5100. After checking
all the usual ftp sites, I could not find any mods for the rig.
Any help in this area would be appreciated.

All though I7ve only had it for 1 day my initial impressions are quite favorable.
I particularly like its extremely small size, which m was my primary reason
for choosing this rig. Examining its dual band receive(in band) it
seems to do like k most other rigs and have a good main receiver and a poor
secondary /sub one. The sub receiver performs ok when scanning/listening to
ham bands, but is eaten alive by pagers and the main receiver, when the sub
is tuned out of ham bands. HOwever having the main receiver out of band
and the sub receiver in ham band works ok(note this applies only to
the VHF receivers, I haven't messed with the 440 side much yet).

What about CHU the time station in Canada? It transmits USB with the
Carrier "reinserted" as it was explained in one article I read.
There are also some Shortwave Brodcasters that transmit USB with the
Carrier, is that done the same way?

Keith Poole <kp2a+@andrew.cmu.edu> says:

>>I talked to TA2BK who said to QSL via 1992 Callbook address -- which says
>>to QSL via DJUJ. Can someone tell me what DJUJ is? THanks.

Funny.... I have a 1992 callbook that has a proper address, which
I am much too busy (i.e. lazy) to type in here. You must have swatted
a fly on that page of your callbook and it now looks like DJUJ. I don't
think they print several different versions of the callbook.

Actually, now I look back at my log I have DJ0UJ for a QSL route,
which sounds more likely. But that is still not the entry in the '92
callbook.

> Are you saying that the '"no-code" bashers' are a majority of hams?
>
> Puh-leeze.

Well I would say that they are a majority of hams who have been licensed
for more than a few years. The no-clues (oops I mean no-codes) have
increased disproportionately to other licenses. It figures though.
Americans tend to always like the "easy" way in everything. Whine and
bitch enough and complain that something is unfair and/or discriminating
and POOF here you go, take it. Even if those complaints are irrational
and unfounded, just the "idea" of inequality bunges up some peoples
panties. Two meters sounds something reminiscient of CB around here.
It is not necessarily the code requirement that bothers me. It is the
joke of a test which is administered. Give me a break, when I hear of 8
or 9 year old kids who pass their advanced or extra class licenses and are
still doing long division in school. Can you say "rote memorization".
It all started with the digital license idea. But you give them an inch
and they take a yard. Lets make the question pools too large to
memorize. Or better yet, do not publish the current question pool in
use. Tailor it something like the LSAT exam or other graduate school
standardized exams.

>substituted. The rest of the net does not care about such things; I fail to

Let me see if I understand this. Since I can't see the other person's face, it is acceptable and normal for me to curse the other individual? Funny, I don't remember that being a part of telephone, radio, writing, or any other non face to face communication etiquette. Sounds like net logic to me, i.e. faulty and bogus. Others on the net may not care about such things, but I can assure you some do. It's called respect for others. I know that respect may not be in vogue right now or even politically correct, but profanity hardly seems like an answer.

Stating one's opinion is certainly a right, but does swearing at the other person help do anything other than weaken your position. Maybe you find profanity helps convince you of another persons position. I personally disregard it as juvenile and indicative of a lousy argument. Grow up and show some self control.

73,
Todd

From: martinbw@jackatak.raider.net
Message-ID: <PTHy3B1w165w@jackatak.raider.net>
Source record: 282250

I have only had my license for a few months now but I have finalymanaged to buy a GAP antenna and Borrow a Ten-Tec Omni-D so that I could try out some HF in addition to the VHF/UHF that I have been using since my license arrived. I was listening to 40m around 7.24MHz whrn I heard a CQ call from NR5T. before I could jump in an answer came from anothe HAM but I did not catch his cll sign. His signal was weak but mostly readable (33 or 43?) NR5T comes back saying that he cannot hear the reply (then how did he know to say that) and then says if you do not have an amplifier you have no business being on 40m at night. While this kind of attitude and those HAMs on the net that FLAME and degrade those HAMs that have chosen to not take any of the element 1 tests (yet) is not what I expected from this hobby, I am not going to let it scare me away. I know that these people are in the minority (although vocal) and that there is a lot comraderie in this hobby and that is one reason why I am here.

I now step down from my soapbox.

>How is Suing a Jammer technically different from suing someone over a barking
>dog? People file such suits all the time.

Well, I am not aware that such suits happen "all the time" (you might correct
me), and I am not sure that they are very successful. I have seen local
ordinances applied to such circumstances (civil fine, etc.)

>If nothing else you should be able to get a restraining order from the judge to
>prevent the jammer from repeating his/her acts. While getting $10,000 from the
>jammers wallet may be very satisfying, getting them to stop is what you are
>really after.

Ahh....restraining orders are very difficult to get. Really. They are just
as serious an project as the suits for damages in many ways. You could
probably get a Temp Restraining Order (TRO) in most cases without much
problem given reasonable evidence, but that is because the opponent does
not likely have time to oppose the Order at that time. To get a Permanent
Order is a difficult and expensive proposition in most cases.

>Sound reasonable?

Again, given the best of evidence and a basically cooperative jammer, it
might work just fine. Just seek the best legal advice and put your ducks
in a row...take it very seriously...if you want to succeed.

>I'm NH6IL and I'm against the no-code license.

I am strongly in favor of the no-code license. The main reason is: people
like me who have very little interest in CW should still have a spectrum
to use without CW. Morse Code is becoming obsolete (with exception to the
"entertainment bands"), so why make it a necessity for a HAM license. What
makes a person that has CW knowledge better than someone who does not? The
answer: nothing! I have no wants to enter into HF for CW purposes. The only
reason I would get the higher class priviledges is for the phone on the
HF bands. I just simply prefer talking. I don't think that I, or others like
me are a hinderance to the HAM bands. My friends and I (all no-coders) have
helped in many local emergencies and believe that we have been an integral

part of these disaster relief efforts. If the CW mandate was still in effect, I like many others would not be involved in HAM or these benefits to our society.
Sincerely,
Andrew Parker

I'm about to write my test, and I'd like to get comments from the net on full-featured 5W Mini 2m HTs.

I want to get something with everything under the sun that doesn't feel like I'm lugging around the kitchen sink.

I'll summarize to the net if I get sufficient responses.

I'm also still interested in hearing to full-featured Dual Band (2m/70cm) HTs.

And, running Packet through these HTs with an Amiga or an HP48sx 8-)

Filterplexers are now considered passe, we use a SAW filter in a
low level modulator and linear amps from there. With the filterplexer
you had to discard 1/4 of your power heating the cavities, not real
efficient. Our old transmitter used water cooled filterplexer cavities,
our new one uses a simple combiner.

The low level modulation allows you to hetrodyne to any frequency you
like, so frequency agile units should be rather straight forward.

This is just an excuse! To assume that in a language that contains 500,000
words the only way to express strong feeling is by using foul language is
the height of ignorance. The use of four letter words has proliferated
because people are incapable of any substantial use of vocabulary or any
real expression of feeling. When one descends into the gutter, one generally
stays there (and not just to express strong feeling).

It is absurd in the highest degree to assume that it is OK to swear on
a network just because it isn't over the air. This type of language is
inappropriate regardless of where it is done. Perhaps a little stint in a
dictionary would overcome the need to use 4 letter words.

Why on earth use AM. If you are planning on transmitting music FM is MUCH
better, and many more people have FM recievers.

At present the chances of getting a transmitting licence are virtually zero.
Our campus managed to get a temporary 2 week licence during RAG, but that
was it.

If you are planning on transmitting without a licence don't bother, your
station will be shut down within a few days (someone on our campus tried,
and got a heafty >> R1000 fine.

Hey, this is America! All you have to do is lift up a rock, pull out one
of the slimy creatures that lives there (WEAR GLOVES!), and go to court.
No evidence needed. No money needed. It only costs you a percentage of
your award but it costs the other guy plenty to defend himself.

Of course, he could turn around and do the same thing to you.

Is something wrong here?

Scott... I cannot find your original post... but wherever you are Cater's suggestion that you connect with your ARRL Section Emergency Coordinator is a valid one. It is our "job" to know what services are being provided via the ARES-types out there. look us up in the latest issue of QST... or even if you have to call the ARRL... or e-mail to lhurder@arrl.org will get you the info on who your section you need to contact.

The SKYWARN program is a great application of ham radio. We periodically will go on the road here in EMAS to train and promote SKYWARN spotting. It can be especially helpful even if one is commuting to and from work with a good repeater. The National Weather service needs the additional eyes and ears to supplement what their radar shows. Not sure what the "new" doppler radar will miss... but hopefully us hams can fill in the holes for them

73 for now.... c u on the shortwaves

I, too, have had problems with UPS -- the last incident was with an insured package the was clearly marked (with a UPS sticker) "adult signature required." It was left on my front doorstep and was visible from the street. I was glad it was insured.

In the long run, we can't tell UPS how to run their business -- it might be cheaper for them to spend 30 seconds less per delivery and pay $1000 every once in a while for a lost package.

[Note the followup line -- let's try to keep this out of "swap" space.]

1819. ARRL Radio Buyer's Sourcebook

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-03 14:26:29 UTC
From: Charles.R.Hohenstein.1@nd.edu
Message-ID: <Charles.R.Hohenstein.1-030593091923@hesmac16.hesburgh.lab.nd.edu>
Source record: 282287

I spoke to someone in the publications department at ARRL this morning, who told me that "Radio Buyer's Sourcebook II" will be released at the end of May.

Will this be a revised and updated version of the 1991 edition, like the forthcoming "Now You're Talking II," or will it be a supplementary volume, covering different models?

I know that several ARRL employees monitor this newsgroup, and I am hoping that one of them will be able to discover the answer to my question!

SB SAREX @ AMSAT $STS-55.018
SAREX Mission Update & QSL Info

May 3, 1993 13:00 UTC

The power conservation effort on the Space Shuttle Columbia, discussed in the last SAREX bulletin, was quite successful. Yesterday, NASA announced that the STS-55 mission has been extended for one full day. Landing is now set for May 6 (Thursday) at 13:03 UTC.

As a result of this extension day, the Shuttle Amateur Radio Experiment (SAREX) working group has gotten permission to extend operations until May 5 at 20:50 UTC.

Nearly all the school contacts have been completed at this point, so it can be assumed that general voice and packet QSO operation will pick up over the next few days; however, there is NO GUARANTEE that this will be the case. Several stations have reported making packet connects to STS-55 over the past few days.

Since the shuttle is still in a power conservation mode, the astronauts will use battery power during voice contacts. In addition, since the computer is not currently being utilized for packet operations to save power, stations on the ground are encouraged to download all SAREX packet telemetry to disk and forward this information to the Working Group so the SAREX team can have a compiled log of the stations who were heard by the shuttle. Please send any packet downlink data you have obtained for this mission to:

STS-55 Packet Logs
c/o Frank Bauer, KA3HDO
1804 Hopefield Rd
Silver Spring, MD 20905

Please use a PC-compatible disk (3.5 inch preferred) and store the data in an ASCII format. The SAREX team will then compile this information into a database, similar to the service provided by Tom Clark, W3IWI, for the STS-35 mission. If there is a group interested in compiling this data, please contact me at my home address (above) or on E-Mail: ka3hdo@amsat.org

QSLs

As with all SAREX flights, a special QSL card is planned for this mission. If you make a 2-way contact with the crew or hear the SAREX downlink, you qualify for a QSL card.

The IBM Amateur Radio Club of Boca Raton, Florida has volunteered to act as the QSL manager for the STS-55 SAREX mission. For the STS-55 mission, please send your QSLs to:

IBM Amateur Radio Club/1993
PO Box 1328
Boca Raton, FL 33429-1328

On the outside of the envelope, please write STS-55 SWL or STS-55 QSL--2-Way depending on whether you heard the downlink or made a two-way contact.

For all QSLs, it is essential that you include an Self-Addressed, Stamped Envelope (SASE) using a large (4 inch x 9.5 inch) envelope. If an SASE or sufficient IRCs are not included with your signal report you will not receive a QSL card.

Submitted by Frank H. Bauer, KA3HDO for the SAREX Working Group

/EX

Hi Net,

I am interested in putting a 'portable ATV repeater' on the
air. I would like to hear from ANYONE who has expierence in
this field. [i.e., antenna's, xmitter's, receiver', COR,
ID'er, power supplies, freq's, etc.]. A check list, or outline
of required equipment, etc., would be most helpfull. Thanks in
advance for the help/suggestions.

>From ARRL Headquarters
Newington CT April 28, 1993
To all radio amateurs

SB QST ARL ARLB047
ARLB047 30 meter petition denied

30 meter petition denied

The FCC has denied a petition to grant Novice and Morse code
certified Technician class licensees access to a portion of the
amateur 30 meter band. The petition, by William G. Welsh, W6DDB,
asked that such licensees be allowed CW operation from 10.1 to 10.15
MHz.

Welsh argued that the 40, 15, and 10 meter bands currently occupied
by Novices and Technicians are becoming less useful due to changing
sunspot conditions and interference from shortwave broadcast
stations. He also said that the longer antennas needed for
operation on 80 meters limited the appeal of that band for Novices
and Technicians.

The FCC said that in opening the 30 meter band to the Amateur
Service in 1985 it had not included Novices and Technicians in order
to promote an acceptable balance between licensing incentives and
operating privileges. It followed the same guideline in the opening
of the 17 meter band in 1989, the FCC said.

Thus, this petition for rule making was repetitive, the FCC said.

ZCZC AG90
QST DE W1AW
ARRL BULLETIN 49 ARLB049
FROM ARRL HEADQUARTERS NEWINGTON CT
APRIL 30, 1993
RELAYED BY KB8NW/OBS & BARF-80 BBS
TO ALL RADIO AMATEURS

SB QST ARL ARLB049
ARLB049 SCANNER BAN

EFFECTIVE APRIL 26 THE FCC HAS BANNED THE IMPORTATION AND SALE OF
RADIO SCANNERS CAPABLE OF RECEIVING CELLULAR TELEPHONE TRANSMISSIONS
(IN ET DOCKET 93-1).

WHILE THE FCC DENIED AN ARRL REQUEST FOR SPECIFIC WORDING THAT BONA
FIDE AMATEUR EQUIPMENT BE EXEMPTED FROM THE NEW RULES, THE
COMMISSION DID AGREE TO MODIFY ITS PROPOSED RULE ON CONVERTERS SO
THAT IT APPLIES ONLY TO CONVERTERS ''DESIGNED OR MARKETED FOR USE
WITH SCANNING RECEIVERS.''

THE NEW REGULATIONS CHANGE PARTS 2 AND 15 OF THE FCC RULES TO
PROHIBIT THE MANUFACTURE OR IMPORTATION OF RADIO SCANNERS CAPABLE OF
RECEIVING FREQUENCIES ALLOCATED TO THE DOMESTIC PUBLIC CELLULAR
RADIO TELECOMMUNICATIONS SERVICE (PRESENTLY, 824-849 AND 869-984
MHZ).

THE SPECIFIC WORDING SUGGESTED BY THE LEAGUE (AND NOT ADOPTED BY THE
FCC) APPEARS IN MAY QST, PAGE 87. THE FCC IN DENYING THE LEAGUE'S
REQUEST SAID THE RULE MODIFICATION ''WOULD NOT ADEQUATELY ENSURE THAT
SUCH CONVERTERS WOULD NOT BE READILY AVAILABLE AND COMMONLY USED TO
INTERCEPT CELLULAR COMMUNICATIONS.''

''HOWEVER,'' THE FCC SAID, ''WE DO NOT BELIEVE IT APPROPRIATE TO
RESTRICT CABLE TELEVISION CONVERTERS OR OTHER DEVICES THAT MIGHT BE
ABLE TO RECEIVE CELLULAR TELEPHONE TRANSMISSIONS BUT WERE NOT
DESIGNED FOR THAT PURPOSE.''

THE FCC'S NEW RULES, IN ADDITION TO THE ANTICIPATED BANNING OF
SCANNERS CAPABLE OF TUNING CELLULAR TELEPHONE FREQUENCIES (OR OF
BEING EASILY MODIFIED TO DO SO), ALSO PROHIBIT FREQUENCY CONVERTERS
```

THAT EITHER CONVERT OR ARE EASILY MODIFIED TO CONVERT CELLULAR FREQUENCIES TO OTHER FREQUENCIES OUTSIDE THE CELLULAR BAND THAT ARE EASILY RECEIVED BY MOST SCANNERS.

IT IS POSSIBLE THAT COMMERCIAL MANUFACTURERS MAY FILE PETITIONS FOR RECONSIDERATION, PARTICULARLY FOR CLARIFICATION OF THE ''READILY MODIFIED'' DEFINITION.

1829. Novice tkt in 7wks; advice to interested

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-03 15:43:56 UTC
From: rhair@sherlock.ximage.com
Message-ID: <1993May3.154356.1996@ximage.com>
Source record: 282257

Hello Group,
Well I managed to get my Novice license in 7 weeks! Took the test at
the Sunnyvale (CA) VEC.

I did my studies in one week also... B.S. in Computer Sci. and had
some familiarity with the letters (pick out 75% by site) before I started.
I Copied code for 15 minutes twice in the morning and twice in the evening
for a total of one hour/day. Studied _Now Your Talking_ on my lunch Hr.
I spent more time on the weekend for it of course.

My advise to anyone interested in getting a license:
1) It may not be as difficult as you think. It is a choice.
2) Practice code for relatively short periods of time every day. Keep
your copy sheets and watch the improvement!!
3) Follow through with taking the test. I just decided it was time to
get my license... Set a date (goal) for taking the test and make
it happen.
4) It can be/is a lot of fun... eg: I went to the park to test out a PVC
tower design I made... It was mostly a failure... But I learned a
lot, had a *HECK* of a lot of fun, and know what I need to try next.
==> creative outlet from the daily routine.
5) FLAME WARS: If you have monitored this group and do not read very many
groups on the net, you may not realise that "flame wars" are a real
phenomenon in news... Please remember that they are... optional!?!
There are LOTS of topics to ask about/consider/ponder that don't
require derision!! As always, if you reach out, someone might try
to push you down... You can let it happen, fight back, or ignore...
(I guess you can hold back of course but then you get less of a
chance to learn.)

>sure of the model number of the charger but it's the standard one which
>came with my radio. The manual (yes I did read it) suggests 14 hours for
>the 7.2v battery. Any nice person have the bigger battery? Thanks.

Yes. -- Oh, I guess you wanted to know how long to charge it ;-)
The 12 volt Alinco battery I have (EBP-22N) is labeled 700mAH, which is
the same as the "standard" battery, just higher voltage. It uses
different contacts in the charger base, and charges in the same time.
(Though I'm now using the WW Associates fast charger, which is a big
help. When it's done, it switches to trickle and lets you know.)

I think the charge time for the 12V battery is mentioned on the little
sheet that comes in its box...

1831. AMP is RADIO?

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-03 16:04:23 UTC
From: lovric@fifi.informatik.uni-dortmund.de
Message-ID: <1s3fq7INN8p0@fbi-news.Informatik.Uni-Dortmund.DE>
Source record: 282291

first: I don't know if i'm posting to the right newsgroup.

second: I'm no radio or electronic wizzard.

Ok here's the question:

I have a guitar amp for practicing at home, but there is one problem:

Instead of my guitar I hear radio, too!
In the evening it seems to get even worse, so that I can't concentrate
on practicing. Is there a simple solution to the problem (were does it come from?),
or shoud I burn my amp (everything else works fine)?

1832. Best antenna for use with ICOM R7100

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-03 16:13:29 UTC
From: archer@access.digex.net
Message-ID: <1s3gb9$i4j@access.digex.net>
Source record: 282289

O.K., I've finally dropped the bucks on an ICOM R7100. Can anyone suggest an antenna that would be optimum for the R7100's freq coverage.

Someone at work mentioned a R.S. Discone, but I know a person who had one and didnt like it. Any Suggestions?

Thanks:

Please respond via mail to : archer@access.digex.com

> a huge rotating disk pattern).

If the amplitude at the receiver doesn't change, then you won't detect sidebands there. Oops, well, unless they are caused by phase modulation (changing _distance_ can do this, as in a Doppler scanning _receiving_ antenna). I think it's fair to say that the sidebands are created as part of the modulation process; in this case, a receiver directly above the antenna (assuming perfect symmetry and unvarying propagation) would see no modulation, as would the airborne receiver you describe (what a ride!). You have a spatially dependent modulation process, and there are points (or trajectories) in space that don't see that process...

If you could take a "snapshot" of the RF fields some time after you start the process and compare it with a snapshot of a "normal" AM signal with the same modulation frequency, in one case you would see concentric spheres of maxima alternating with minima, and in the other, it would be a spiral in the plane of the antenna and uniform intensity above and below the antenna. The spiral would appear to turn in time, but the concentric spheres would simply expand...

1834. Hams going to CICC ? / CQ San Diego

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-03 16:32:35 UTC
From: brucec@tekgen.bv.tek.com
Message-ID: <2682@tekgen.bv.tek.com>
Source record: 282300

Any hams going to Custom Integrated Circuits Conference in
San Diego May 9 to May 13 ?

If so, maybe there is a 2mtr repeater there we can use
for ragchewing. If anyone from San Diego reads this
maybe you can advise which machine would be best?

I'll be there, how about you?

1835. Re: no-code defense (really: rec.radio netiquette)

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-03 16:45:17 UTC
From: paulf@umunhum.stanford.edu
Message-ID: <1993May3.164517.9198@leland.Stanford.EDU>
Source record: 282290

The consensus that seems to have built up over the years is that flamage is somewhat unwelcome in rec.radio.amateur.misc, but considered part of the job in rec.radio.amateur.policy. Likewise, this topic (the seminannual code confligration) doesn't belong here, either.

> some sidebands, or at least "sidebands".

I am afraid that I must disagree with Alan here - IF the plane were capable of exactly tracking the antenna, it would see the unmodulated carrier, and hence no sidebands (imagine a universe containing only the rotating antenna and a plane circling at the same rate, such that it "tracks" the beam; how does this differ from the case where both are fixed?). (Actually, I think Alan misunderstood the argument; he seems to have envisioned an airplane flying around a fixed antenna.)

However, this does NOT mean that you are correct in your original assertion that a fixed-position receiver observing the output of the rotating antenna would not see sidebands, whether or not it is obvious to you where these come from. It should be clear that such a receiver sees a signal which varies in amplitude (essentially an AM signal), and thus DOES see sidebands in the frequency-domain view of this signal. Where do these sidebands come from, if they're not present in the "original signal"? From the rotation of the antenna - this IS, from the fixed receiver's point of view, amplitude modulation of the carrier, with the modulating frequency being the rate of rotation of the antenna. There MUST therefore be sidebands at +/- that rate. Always keep in mind that the time domain and frequency domain are inseparable; if you see something in one, you can ALWAYS predict what you see in the other.

If you simply MUST have a physical explanation of the sidebands in the frequency domain, consider how the distance between the receiver antenna and the hypothetical "point of radiation" at the transmitter is changing as the transmit antenna rotates. Better yet, consider the "view" of a rotating dipole antenna as seen from the receive antenna location. A very sloppy description of what's going on, but I think you'll get the idea if you follow that path.

(Damn. And I *swore* I wasn't going to get into this any deeper.....)

I've had a FT470 for the last two years and haven't found a thing that I wanted to do with it that I couldn't do. Recently, I've learned how to expand the the receiver range to 500mc which permits me to listen to the local fire and police
chatter. Its not perfect, but as good as any I've come in contact with.

1838. Why is .info stuff here?

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-03 16:57:27 UTC
From: myers@hpfcso.FC.HP.COM
Message-ID: <103360176@hpfcso.FC.HP.COM>
Source record: 282081

Is there some reason that bulletins, orbital elements, etc., are still being posted both here and in rec.radio.info? I thought that that group was created specifically to relieve the clogging of the .misc groups; it certainly hasn't done that, and now I simply see duplication.

The only argument I can possibly imagine for continuing to post such items here is that "not all sites get .info". I suspect that this would apply to very, very few sites; if there are some who receive .misc and NOT .info, I'd sure like to know why. If they're worried about disc space, they're sure not seeing any real difference as long as all of .info winds up here anyway!

I understand that the Meteor birds are often turned off when not over
Russian (or former Soviet) territory. That might explain at least
part of the problem.

In article <1993May3.015821.8373@nntpd2.cxo.dec.com> little@nuts2u.enet.dec.com (nuts2u::little) writes:
>Let me see if I understand this. Since I can't see the other person's
>face, it is acceptable and normal for me to curse the other individual?

On this new, different, evolving medium, yes, it is. You will not find this discussion in any other newsgroup (certainly none of the hundred or so I read). The net is *fundamentally* *different* from other forms of communication, and different conventions have evolved to fit.

>Funny, I don't remember that being a part of telephone, radio, writing, or
>any other non face to face communication etiquette.

This is neither telephone, nor radio, nor writing. This is Usenet. It is different.

>Others on the net may not care about such
>things, but I can assure you some do.

Why are those that care found only in this group? I submit it's because the folks here, experienced in one form of communications, try to apply the rules that are appropriate to that form of communication to others they then encounter, whether or not those are appropriate, or based on the same reasons. This is *NOT* ham radio. The rules are different.

>It's called respect for others. I
>know that respect may not be in vogue right now or even politically
>correct, but profanity hardly seems like an answer.

There are times when you have to use extreme measures to get a point across sufficiently strongly.

I've been involved in this same discussion over in .policy a few weeks ago, because I used a similar phrase to describe my true feelings about someone who bragged about jamming repeaters. I felt then, and feel now, that there was no other means available to me to convey the true depth of disgust and loathing I felt for that individual's actions. Nothing carries quite the same force as saying somoene is a ****ing disgrace to ham radio, and that's not because I lack the vocabulary to express the feeling; rather, it's because everything else is simply a poor euphemism to hide strong feelings from those who cannot take them.

>I personally
>disregard it as juvenile and indicative of a lousy argument. Grow up and
>show some self control.

I chose my wording carefully and after thinking about it for a while. To call it "juvenile" or thoughtless or evidence of a lack of self-control is to deny that some folks can arrive at that decision in a rational, calm, considered fashion. I refuse to excise words from my vocabulary just because you might find them objectionable.

|follow the maxima of the beam looking for the signal and modulation
|components. Flying in this manner, do you see both the carrier and
|some sidebands, or at least "sidebands".

|If so, we have a new phenomena. Change the scenario just a tad. Mount
|your
|receiver on an extension of the x-element beam's boom and measure the
|frequency received. If you have some other than just the carrier at the
|frequency of the non-rotating signal, then a few texts will have to be
|rewritten.

I don't think so. I read it differently.

The second experiment is to have the plane flying (really fast!)
around the antenna, which is now fixed. The receiver should see the
same thing thing either way.

/J

No, but it's legal.

Unlike on the radio.

I believe one of the bands for unlicensed, low power spread spectrum
devices is 900mhz which was a ham band the last time I checked.

Hi Chris,

This sure sounds like my friend's "Arrow Antenna" article. Named so
because the elements are aluminum hunting arrows. Very sweet design.
All pack inside the boom. It wins many direction-finding contests, etc.

Al still makes and sells the arrow 2m beams, along with several other
new antennas. If you are interested:

I'm sure that such UPS screwups are only temporary. As soon as they learn
how to use **OUR** 220-222 MHz frequencies, they should be much better at
their deliveries :)

SB SAREX @ AMSAT $STS-55.019
STS-55 Element Set GSFC-018

Enclosed is the latest Keplerian data for STS-55 as generated by
Ron Parise, WA4SIR at the Goddard Space Flight Center. Element Set
GSFC-018 is currently only 1 second later than set GSFC-013.

STS-55
1 22640U 93 27 A 93123.25305914 0.00042450 00000-0 11791-3 0 181
2 22640 28.4600 219.3897 0013548 312.9549 46.9926 15.92061423 1076

Satellite: STS-55
Catalog number: 22640
Epoch time: 93123.25305914 (03 MAY 93 06:04:24.31 UTC)
Element set: GSFC-018
Inclination: 28.4600 deg
RA of node: 219.3897 deg Space Shuttle Flight STS-55
Eccentricity: 0.0013548 Keplerian Elements
Arg of perigee: 312.9549 deg
Mean anomaly: 46.9926 deg
Mean motion: 15.92061423 rev/day Semi-major Axis: 6674.6472 Km
Decay rate: 0.42E-03 rev/day*2 Apogee Alt: 305.30 Km
Epoch rev: 107 Perigee Alt: 287.22 Km

NOTE - This element set is based on NORAD element set # 018.
The spacecraft has been propagated to the next ascending
node, and the orbit number has been adjusted to bring it
into agreement with the NASA numbering convention.

Source record: 282318

SB SAREX @ AMSAT $STS-55.020
SAREX Update 5/3 @ 20:00 UTC

I have just obtained the following e-mail from Lou McFadin W5DID at the Johnson Space Center:

The crew just reported that the N connector was pulled out of the SAREX antenna cable. This prevents further operation using the SAREX window antenna. We are in process of obtaining permission to conduct further SAREX ops from the module using the SAFEX (Payload bay mounted) antenna. We are also asking for permission to plug the Packet module into the DC outlet in the module. Previous permissions only allowed battery ops in the module.

This means that voice and packet ops are somewhat questionable for the next couple of hours; we will keep you posted.

From: easu348@orion.oac.uci.edu
Message-ID: <easu348.736460736@orion.oac.uci.edu>
Source record: 282319

Hi folks!
I'm a new HAM, and I have one maybe stupid question that the FAQ does not begin to cover. Here in California (hopefully elsewhere) HAMs with a "Z" in their callsign sometimes say the (word?) "zed" instead of just plain "Z". I'm wondering why, and where it came from, if anyone knows. Oh, and it's not just another replacement for "zulu", it's instead of the letter Z. Thanks for everyone's help.
Andrew

STS-55 Worldwide Rise&Set 5/4-6

Below are the rise and set times for STS-55 for selected worldwide cities
over the next three days. This data was generated to help hams without
orbit programs to participate in the SAREX activities. Please note that
the times shown are UTC and NOT LOCAL TIME. This listing includes only
those passes with an elevation greater than 5 degrees. For information
regarding SAREX frequencies and operations procedures, check your local
PBBS, or bulletins from W1AW, W5RRR, W6VIO or WA3NAN.

> such antennas?

I have built a 90cm loop antenna as an afternoon project, using 2mm wire + a capacitor with 2mm spacing. It tunes 12-30MHz. At the floor level, it works as well as the attic dipole on 18MHz, or better when conditions are ending. The wire is getting slightly worm on 14MHz but stays coll at 18MHz and up. I have heard that the losses of the loop increase as the 4th power of the frequency. Consequently, to cover next 30% lower frequency one needs 2-3 times thicker wire (or tube). Consequently, building a loop antenna with a 90cm diameter and 18 MHz lowest frequency is trivial, it is somewhat more complicated at 14MHz, and becomes a challenge at 10MHz.

And why might they want to pull my license? It's not illegal to state
ones views in a forum like this. But if I were to say that over the air,
which I've never done, they might have cause to issue an NAL of some
sort. So go pound sand... and keep dreaming.

> transformers. The question: Can I wire them in parllel?

Alan-

This may be slightly speculative - I believe you can wire the transformers in parallel ONLY if you can adjust them to have EXACTLY the same turns ratio. If the primary is off by a turn or two, you may not be able to adjust the low voltage secondary alone, to compensate.

If you can't adjust the ratio exactly, you might use two bridges for isolation, so any difference in turns ratio won't act like "shorted turns". This way, the transformer with the highest output voltage will carry the load until its I-R drop brings it down to the voltage of the lesser winding. I suspect the highest voltage winding will always carry more of the load, so you won't have twice the capacity of one transformer alone.

1861. Re: Sueing Jammers (Was: Re: "Busting" Jammers)

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-03 21:50:39 UTC
From: bly@btree.uucp
Message-ID: <1993May3.215039.21460@btree.uucp>
Source record: 282313

You can't bring a "normal" civil suit for something like jamming.
Any suit brought in state or federal court dealing with RF will be rejected
and you will be referred to the FCC for hearing by an Administrative Law
Judge (ALJ). From there, it goes like this:

1. The FCC will hear civil disputes before an ALJ.
2. Appeal ALJ decision to FCC Appeal Board.
3. Appeal ALJ decision to DC district court.
4. Appeal to DC court of appeals.
5. Appeal to US Supreme Court.

The FCC ALJ can also issue temporary restraining orders (TRO) in civil cases.
I believe there have been TROs issued in the ham bands (147.435 LA repeater
as I recall). I will look for past cases in the WestLaw DB if anyone really
cares.

And of course, malicious interference (911 or other) is a federal felony,
not civil.

P.S. If going before an FCC ALJ, it helps to bring along a Admin law
lawyer. Admin law is funky stuff!

1862. Two-Line Orbital Element Set: Space Shuttle

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-03 21:58:27 UTC
From: tkelso@afit.af.mil
Message-ID: <1993May3.215827.1657@afit.af.mil>
Source record: 282317

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (513) 427-0674, and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

David-

It's been too many years since I had this stuff in school! My recollection is that Energy stored in a coil's magnetic field is =L*I^2. By comparison, Energy stored in a capacitor's electric field is =(C*V^2)/2. Energy is in Joules (or Watt*Seconds), Voltage in Volts, Capacity in Farads, Inductance in Henrys, Current in Amperes.

You may have confused Energy for the commonly used "E" for voltage in your formulas. Voltage, other than IR-drop, across an inductance is zero when the current is steady, and non-zero when current varies. Voltage = L*dI/dt.

Current, other than dielectric leakage, through a capacitor is zero when the voltage is steady, and non-zero when voltage varies. Current = C*dV/dt.

These equations may only be approximately correct. I can't remember if there are any additional constants involved.

1864. "RE: Best HT to work Oscars"

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-03 22:36:00 UTC
From: rc@cmr.ncsl.nist.gov
Message-ID: <9305032236.AA14553@cmr.ncsl.nist.gov>
Source record: 282320

usc!howland.reston.ans.net!usenet.ins.cwru.edu!cleveland.Freenet.Edu!ag447
@network.UCSD.EDU
asks:
"what are the best ht's that will work voice on the oscars"
answer:
The short answer is "NONE of them". HTs transmit and receive FM, which is
very inefficient in its use of transmitter power supply. FM also requires a lot
stronger received signal than SSB or CW in order to be copyable. Since there
is ALWAYS a shortage of power on amateur satellites, all-but-one STRONGLY
discourage the use of FM (or plain AM).
With the present ham satellites, an HT (with just a whip antenna) would be
some 10s of dB below what is required for working through the Oscars. You need
to be able to transmit on one band and listen on another at the same moment
(full duplex). Some all-mode VHF/UHF rigs allow this. For voice operation,
most people would suggest beams of at least a half-dozen elements for both
transmitter and receiver.
The AMSAT Phase 3D project intends to provide a satellite which will be
easier to work, but it will be 3-or-so years in coming.
AMSAT's phone is 301-589-6062.

jd-

I have both the 22S and 22U, but haven't installed PL in either. However, I have installed a Communications Specialist board in a Kenwood TS-670 with the FM-10 board, and in a KDK FM-6033. In both cases, 5 volts was available, so the Com Spec's on-board 5 volt regulator was removed and bypassed prior to installation. I think it was the Com Spec model SS-32P, but not sure.

Lessons I learned:

1. You MUST inject the tone beyond the limiter stage. If you don't, the tone will disappear while voice signals are in limiting. Look at the diagram supplied with the radio, to see where they injected the tone in the version with PL option. It is probably close to a "vari-cap" voltage-variable capacitor in an oscilator circuit.

2. Use a 100K ohm resistor to isolate the output from the tone board from the injection point.

3. Bypass the output of the tone board, close to the 100K ohm resistor. I used a 0.01 mf ceramic capacitor.

4. Keep wiring short and away from high power RF stages.

5. Adjust PL deviation to about 750 Hz. Adjustment procedures for various radios range from 500 Hz to 1,000 Hz. Some have no adjustment, and specify that you should verify it is within that range.

I hope this is helpful, if you don't get the exact information you need.

From: easu348@orion.oac.uci.edu
Message-ID: <easu348.736468509@orion.oac.uci.edu>
Source record: 282229

I have a couple questions about the ability to access the Kenwood 732 and the new 742 through an HT (Kenwood or otherwise).

1. Do these radios have the ability to be accessed by remote in the first place?

2. Does one need a Kenwood HT to do this?

3. Would this be done through DSQ paging codes?

4. Assuming all this is possible, could you change frequencies plus use other radio functions, or just turn the power on and off?

The answers to these questions would sure help me out quite a bit. I would appreciate any responses. Thanks in advance!

Strongly-flavored words are not, in themselves, "childish" or "immature". They can be used that way, and often are by the uneducated. These same people often use such words because they have inadequate means of expressing themselves.

However, those same words convey a flavor and a strength of emotion that CANNOT be expressed in any other way. When they are chosen by a mature and well-educated individual because he needs that degree of expression, the words are not inappropriate.

The two usages are different. Please try to recognize the difference. It is not the words themselves that are the problem. Sometimes no other expression will do to adequately express one's thoughts.

That some find these certain words unconditionally offensive is often a reflection of the childishness and immaturity of the listener.

Golly, for the second time this year, I've agreed with Jay Maynard. I must be sick.

From: SHMC0874@BCIT.BC.CA
Message-ID: <9305032314.AA04345@ucsd.edu>
Source record: 282326

A couple of years ago I purchased a Sencor model S 1177 HP AM / FM car cassette player.

The unit was purchased in Asia and has worked fine except the AM broadcast band tuning step is the European 9 khz spacing.

The main processor inside the player is a Sanyo LC 7230 controller, which seems to have its own ROM coding and RAM internal to the chip.

The front panel controls that handle tuning and general operation address this chip.

Does anyone know how to reprogram this unit for 10 khz tuning step size ?

I suspect that a certain key sequence from the front panel on power up may do it, but I am only guessing.

Any help would be appreciated.

Ahhh. That explains why my service manual for the 2006 came with an Addendum for the 20-145A. Not that it mentions any differences apart from the front panel. I haven't seen any "new" 2006's yet.

> (Not that I plan to listen to cellular, just that I think that a
> scanner with a deliberate hole in it's coverage is BROKEN!)

The service manual makes no mention of any coverage alterations. The CPU is still the same too. As far as I know, the Australian/European models have no "holes" in the coverage.

>You can't bring a "normal" civil suit for something like jamming.
>Any suit brought in state or federal court dealing with RF will be rejected
>and you will be referred to the FCC for hearing by an Administrative Law
>Judge (ALJ). From there, it goes like this:

Ooops. This is a basically correct idea in that many judges will try to send you there, especially if your case is based on FCC regulations, BUT you can certainly try a case in tort law (negligence, nuisance, tortious interference with contract, etc.....) based upon someone intentionally interfering with a repeater. Your success will not be based upon a judge sending you before the FCC, it will be based in State (Common)) Law over which the FCC and Federal Courts basically have no power.

>1. The FCC will hear civil disputes before an ALJ.
>2. Appeal ALJ decision to FCC Appeal Board.
>3. Appeal ALJ decision to DC district court.
>4. Appeal to DC court of appeals.
>5. Appeal to US Supreme Court.

You can only get there based upon FCC regulations, as stated above. If so, fine, but the kind of cases we are talking about are civil suits based upon Common Law.

>The FCC ALJ can also issue temporary restraining orders (TRO) in civil cases.
>I believe there have been TROs issued in the ham bands (147.435 LA repeater
>as I recall). I will look for past cases in the WestLaw DB if anyone really
>cares.

I didn't know this, and this is very good information. PLEASE give citations from Westlaw (wish I could afford the service!!)

>And of course, malicious interference (911 or other) is a federal felony,
>not civil.

Well, again, it can be both. You can certainly sue someone for intentionally interfering with YOUR particular emergency if you suffered damages....and it would be based upon Common Law, where the Federal Court has no business, except in limited circumstances. (A true Federalist!) All this while the Federal Government can still go for the Criminal charge. This is the same as a Thief stealing from your home: The fact that he is locked up for a criminal charge does not stop you from bringing a "trespass to chattell" or "conversion" suit in Civil Court to get the property back or to get restitution (which the Criminal Judge is under no obligation to order....) Many persons affected by crimes later bring civil suits in order to get restitution from the criminal (if the criminal has any property!)

>P.S. If going before an FCC ALJ, it helps to bring along a Admin law
>lawyer. Admin law is funky stuff!

Agreed! Absolutely agreed!

In rec.radio.amateur.misc, gary@ke4zv.uucp (Gary Coffman) writes:
>
>LC circuits scale nicely with frequency. To move from 40 to 30 meters,
>scale the inductance and capacitance by sqrt(30/40).

??

I would try scaling the inductance and capacitance inversely proportional
to frequency. For example, in going from 7MHz to 10 MHz, a 100 pF
capacitor would be scaled to 70 pF, while the resonating inductor would
scale from 5.17 uH to 3.62 uH. You usually scale all the inductors
and capacitors, including the coupling/shunt elements.

For casual use, this is probably close enough.

However, stuff like input and output impedances often vary
with frequency unless feedback is used to control them. Thus,
the networks may have to changed to accommodate the new impedances.
Also, when you scale something from 7 MHz to 3.5 MHz, you might
not want to scale the bandwidth. A high performance CW only filter
might cover just 7.0 to 7.05 MHz (or even less of the band). Scaled,
only 25 kHz of the 3.5 MHz band would be covered, which would probably
be inadequate. Sacrificing the part of the 40 meter band you never
listen to is an effective way of improving receiver performance.
Remember, all those broadcast stations combine to produce a really big
signal (calculate the PEP of all those tones).

In a fundamental sense it could have worked. But is hasn't in my
opinion. The whiners finally got their way. It should have been just a
digital license for 144 MHZ and up. Instead we have channel 19 and the
like on two meters and up. So in it's present form I would have to say:

I'm NM1Z and I'm against the no-code license.

Unfortuanely this survey would leave out many of the long time HF amateurs who do not have access to the internet. I would like to see a poll, pertaining to no-code approval, of amateurs who were licensed BEFORE the no-code's inception. You might be surprised that it is not a majority of those hams who favored the no-code license. Including the no-codes in such a poll would alter a representation desired of those who were hams before DAY 1 of that license class. The existing no-codes would largely support a license class which of which they belong. The ARRL is too afraid to ever conduct such a poll. Maybe GALLUP would <grin>.

Source record: 282244
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc

I've been watching this situation play itself out with several long discussion threads (mostly from people who should know better). Apologies for the gross violation of netiquette on my part for posting here as well (I've directed followups to rec.radio.amateur.misc). I've been strongly hesitant to say anything, as this is an unmoderated newsgroup. However, since Usenet is also a cooperative medium, I feel the need to remind others of the following:

- rec.radio.swap is supposed to be a discussion-free preserve of electronic want-ads

- meta-discussions should occur via E-mail or on a discussion newsgroup

- careful setting of the Followup-To: header (and a little personal restraint in taking it to another newsgroup or E-mail) can nip this in the bud

Together we can keep rec.radio.swap noise-free and the successful trading forum that it has developed into over the last few years. For more information, please consult "A Guide to Buying and Selling on Usenet" posted to this newsgroup. Jay and I are working on including some summary information on COD's and caveats about accepting payment from strangers for the next regular posting (we promise! :-).

No, it just gets the point across, even to the clueless. BTW, who died
and made you god?

Not so. Four letter monosylables are great for putting that extra
emphasis on something you want to convey.

Gentlemen (and ladies!),

I'm really tired of replacing the nicads in my handheld every couple of years or so. We now have lead-acid batteries for our camcorders that don't have to be fully cycled, don't have memory problems, etc. They work great! Does anyone know of a good battery for the handhelds? I'm open to all non-nicad suggestions. By the way, mine is a TH-25.

Source record: 282263

Dear Net,

I'm looking for experiences on the Ramsey amplifier kits...
How reliable are they (esp. the PA-10) Can they be easily
converted to other bands (e.g. 10 m)? Are there any other
companies that I should try?

(I'm posting this for a friend --- Callsign: Z251)
Will summarise if appropriate responses received.
Thanks in advance!

Landline BBS open to all: (916) 262-1657
RACESBUL.272 DATE: May 3, 1993
SUBJECT: MGT - The committed volunteer - Part 1/3
The services of any volunteer group hinges on the success of appealing to and utilizing the skills of the individual, rather than stressing conformity of the whole into one rigid mold. This is more applicable to communications volunteers than to, say, law enforcement or fire suppression volunteers. We have discussed previously the broad areas of specialization in which a communications volunteer may serve: administrative, operational, and technical.
As their administrator you may not be familiar with the three levels of activity in which your volunteers may choose to serve. It is our aim to describe these to you and discourage casting all volunteers in to one performance mold, so to speak.
The one common and underlying thread that motivates all dependable volunteers is a strong sense of duty. They will be the last to admit this to you, but it is a commitment to duty that motivates them. This is particularly hard to be understood by paid employees with no experience with volunteers; particularly by or among those employees who cannot understand why anyone would want to volunteer for work which they themselves do not particularly enjoy. The sad truth is that few people work day to day at something they really like and derive a sense of satisfaction and accomplishment. The biggest single reason governments do not have a volunteer program is that the professional staff person does not understand, recognize, and subscribe to this concept. They, of course, seldom see these words (the RACES BULLETINS) because, if they have no volunteers, there is no delivery of these weekly volunteer program management bulletins.
(To be continued in Part 2)
EOM

RACES Bulletins are archived on the Internet at ucsd.edu in hamradio/races and can be retrieved using FTP.

1897. radio mod for uniden scanner

"z" and "c" sound very close, especially if one is not a
native speaker or otherwise fluent in English language.
Here in Europe most people study British English at school,
and in BrE "z" is "zed", not "z" or was is more like "c"...

Good we have the phonetic alphabet system, charley sure ain't
a Zulu..hi!

I read your original request, but failed to discover what sort of improvement you wanted to achieve.

To ANY radio, there is a huge number of possible changes that can be made... output power, audio qaulity, toneburst/CTCSS/DTMF, Rx intermod etc etc.

If you are only interested in expanding the frequency coverage, the field is narrowed somewhat. This generation of ICOM 2m radios had good quality narrow "Helical-resonator" filters in the front end, they give good protection from strong out of (amateur) band signals that would otherwise overload the front end and prevent reception of in-band signals.
Being a multimode, the synthesiser is more complex than in an FM only box, in order to give the smaller tuning steps needed for SSB, and also to keep the phase noise down. The oscillators will not have much more tuning range than is needed to cover the amateur band.
Increasing the tuning range would involve re-doing the front end design with wider filters, which would have to track the tuned freq if you wanted more than a couple of MHz expansion. Major work on the hardware of the synthesiser would be needed to expand the oscillator tuning range, this synth was designed around the amateur band and without total redesign it is not a candidate for extension beyond a few more MHz. On top of this would be the need to modify the firmware.

All this sounds rather negative, I'm not trying to be unfriendly, I'd just like to make the point that it would be easier to build a scanner from scratch than to use such a radio as a starting point. This is actually a Good Thing. You have a better radio there, in terms of its ability to function as a 2m transceiver, than the "just 3 keystrokes gives you 110 to 170 MHz" variety. You will still be able to receive when many of the latest rigs are completely blocked. The joke is that the folk with these all singing, all dancing jobs don't realise they're missing things, because they hear nothing :-)

One caution about the IC290 is that I believe it is one of the ICOMs that lose their firmware when the lithium cell expires, and have to be sent far away to be re-programmed.

Hope this makes up for the lack of response!

David GM4ZNX

It IS the letter "Z"

Z is spoken as "Zee" in the US

Z is spoken as "Zed" in most of the rest of the English speaking
world.

It's one of those regional differences that makes the world an
interesting place.

Zed works better than Zee on the air because it is more clearly
different to (US English usage would have been " different from")

1901. Re: Need for foul language?

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-04 12:41:39 UTC
From: dstock@hpqmoca.sqf.hp.com
Message-ID: <C6I5xH.26G@hpqmoea.sqf.hp.com>
Source record: 282265

Whenever I do something really stupid, or something major goes wrong of its own volition I'm often heard to say something moderately foul aimed at no-one in particular other than myself. I learned a long time ago never to swear at others, or to hurl obscene insults and gestures at them, for the simple reason that it doesn't work.
Any torrent of abuse aimed at the sort of microcephalous cretin that would disagree with me is like water off a duck's back.

If you want to insult someone, there is a better way. Learn from the masters of insults. Ambrose Bierce's "Devil's Dictionary" is a thoroughly enjoyable primer, and will prepare you for the likes of Winston Churchill and Oscar Wilde:

???????? : " I passed your house last night, Mr Wilde."

O. Wilde : " Hmmm, thank you. "

and, for a less terse example :

Lady Astor : " You are drunk !"

Churchill : " And you are ugly, madam, but *I* shall be sober in the morning !"

In order to affect the victim, the humour must be novel, witty and genuinely funny. The insulter must not laugh loudly at the victim, this detracts strongly from the effect of the onlookers' smiles.

Be careful how you use these techniques, because, unlike the foulest of obscenities, they can cause real hurt.

Those who rush into the traditional obscenities are easy victims, they clearly display their lack of experience and lack of ability to do any better. Remember that their general attitude makes them very susceptible to these sorts of insults. They probably are prone to high blood pressure and can easily be pushed into some dangerous medical condition !

Have Fun!
David GM4ZNX

I use this pronunciation routinely. Americans normally pronounce the letter Z as 'zee', but this is easily confused with 'cee' (C) or 'bee' (B). Using the british 'zed' pronunciation for Z is much less prone to error. Having both a 'zed' and a 'vic' in my call, I'm rather sensitive to this problem.

1903. Re: Chicago scanner law

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-04 13:21:54 UTC
From: whs70@dancer.cc.bellcore.com
Message-ID: <1993May4.132154.19178@porthos.cc.bellcore.com>
Source record: 282270
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

This was posted in the alt.radio.scanner newsgroup. Does anyone in
the amateur newsgroups have any details on this proposed ordinance?
Might the ordinance affect the use of any type of mobile
radios by amateurs? If thie "proposed" ordinance only impacts
use of a radio during the commission of a crime, there's probably no
problem, but if it forbids anyone from using radios in certain
legal situations (e.g. mobile use), then it should be opposed
or the language of the ordinance should be changed BEFORE it
becomes law.

The other post follows my sig (please direct all replies to
rec.radio.amateur.policy only.

Oh well, I guess they will stay screwed up....
They have decided *not* to use 220mhz after all. :(
They will use cellular technology and the FCC is going to raffle off
that 220 spectrum.

Z is hard to distinguish from B,C,D,E,G,P,T,& V when just spoken without any phonetic. But saying "zulu" in place of Z each time is rather lengthy. So many hams just use the French for the letter Z, which is zed. A lot of people who have spent time in Europe also do an analagous thing when writing Z, by putting a horizontal line through the letter to distinguish it from a 2.

I'm going to be a no-code Technician in about three weeks. Would you prefer that all classes require code? And then the brotherhood/sisterhood of ham radio operators resume it's slide into obscurity? And then the unused frequencies are slowly reallocated to other services? Don't flame me, this is exactly where ham radio WAS going before no-code.

Be careful who you call a scumbag. I am not just some ex-CBer - I've been involved in radio for 25+ years as a shortwave and scanner hobbyist. I'm also a Software Engineer. The future of ham radio must emrace computers in order to survive - or would you rather we go back to vacuum tubes? I may learn code eventually, but I think it should not be required until advanced and extra classes - and then only about 13 WPM - BUT that's my opinion and I won't call you a SCUMBAG for disagreeing. Although I suppose neanderthal may be closer ;)

I am afraid the correct way to pronounce Z in English is zed. In the USA, English is not the native language, although American-English is very close and could be called a dialect.

The American Zee is local to the USA like the spelling of colour.

So if you take an example the USA EZ-whatever, e.g. EZ-Match, EZ-Edit the name means nothing to the rest of world where English is spoken. I remember seeing an old kenwood EZ-Match and wondering why it was called that. Then an American pronounced it as ee-zee for easy.

On a different point I notice that many products are now being sold in the UK with lables with incorrect spelling (for our language). Now USA imports I can understand, but when it is made in the UK! Even metre gets spelt wrongly! As in two metres, on 14 MHz CW one guy told me he had two meters, presumably one for forward power and one for SWR?

Mike

>for a while, OK?)

What's wrong, of course, is the switch waveform. It's a modulation and
requires finite bandwidth. For example, if the switching is done at
45 baud, the signal occupies 90 Hz at the first order. Since the switching
may be a sharp waveform, there are likely to also be third order components
in the modulation. A switch is a multiplier, common DBMs are just diode
switches driven by a modulating waveform.

Source record: 282271

Hi,

I recently installed the 8251 UART and 4040 divider chip in a 440 radio. I don't have the TTL to RS-232 level shifter box that includes the documentation of the control codes for the radio. I was planning to make a simple cable with the requisite RS-232 driver parts so that I could interface with my computer.

If anybody knows an ftp site with documentation or has the information, I'd be interested in hearing from you. If there is some interest, I can post the results. The service manual for the 440 does not list the control codes.

1911. yaesu undocumented reset.....

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-04 14:17:14 UTC
From: Harald Landvoigt <K3006E1@ALIJKU11.BITNET>
Message-ID: <93124.091714K3006E1@ALIJKU11.BITNET>
Source record: 282221

```
Yaesu - undocumented reset
==========================

this reset allows you to program a new highest and lowest VFO-frequency for
the
1) FT212 2m mobile radio
2) FT411 2m HT

please note that this reset will only work with the radio set to
'international mode'(the known hardware-modifikations for expanded TX)

1) FT212
--------
I power off the radio
II press and hold the 'D/MR', 'F/WRITE', 'REV' button and power on the radio
III the display will show 200.000 and a blinking 'L' in the upper left
corner. use the 'MHz' button and the VFO to tune to your lowest RX/TX
frequency.
IV then press the 'D/MR' button
V the flashing 'L' will be replaced by a flashing 'H'
repeat step III and IV to set your highest RX/TX-frequency.

The radio will work well between 130 and 180 MHz.
This reset should also work with other yaesu mobile radios

2) FT411
---------
I power off the handy
II press the 'MR', '2', 'VFO' button and power on the radio
III the displa will show 1.000 and a blinking 1 in the upper left corner
IV enter the desired lowest RX-frequency with the keypad
V press the 'VFO' button...and a '2' will appear in the upper left corner
VI enter the highest RX frequency and press 'VFO'
VII enter the lowest TX frequ and press 'VFO'
VIII enter the highest TX frequ and press 'VFO'

The PLL locks from 130 to 175 MHz but RX-sensivity is realy bad at 160MHz
and up.
This reset works also with the FT415(which has much better extended RX) and
maybe with other Yaesu handies.

If you have questions how to set the FT411/FT212 to the 'international mode'
send a mail to
internet: oe5len @ edvz.uni-linz.ac.at
packet: oe5len @ oe5xem.aut.eu

I can usually tell what frequencies my neighbors are scanning
because I can hear the local oscillators of their scanners
and add/subtract the IF.

I've monitored strong local oscillator emissions from the
Electra/Bearcat III and Bearcat 260 scanners. In those
instances, they did not interfere much with my activities
and no action was required.

>But I'm still for the no-code license.
> -Steve

I'm N3JGF/AA and I think a bunch of things: (0) WB3I's right about the silliness of this thread; (1) if it's really necessary this kind of a poll would better be taken via email and the results reported back to the net; (1.5) having said that I'll violate my own rule and say that I support the no-code license so that you can all peg me; (2) those who claim that Usenet requires/encourages/permits/prohibits foul language don't understand the inherently distributed character of Usenet. Each different newsgroup has its own character because the readers attracted to each group have a particular character. In the past I enjoyed the relatively respectful nature of ham to ham communications in this and related newsgroups and found a certain charm in the CW abbreviations that pepper the messages; (3) there must be something truely wierd going on in Rhode Island to make our correspondents from there be so vocally antagonistic against Technicians. Or maybe it's a particular club in Rhode Island.

A couple of years ago I purchased a Sencor model S 1177 HP AM / FM car cassette player.

The unit was purchased in Asia and has worked fine except the AM broadcast band tuning step is the European 9 khz spacing.

The main processor inside the player is a Sanyo LC 7230 controller, which seems to have its own ROM coding and RAM internal to the chip.

The front panel controls that handle tuning and general operation address this chip.

Does anyone know how to reprogram this unit for 10 khz tuning step size ?

I suspect that a certain key sequence from the front panel on power up may do it, but I am only guessing.

Any help would be appreciated.

Yes, this is common practice worldwide. Most likely, the practice originated in the UK or Commonwealth, and migrated here. It's done because "Zee" sounds a lot like "Cee", something that I can attest to personally.

HELP! I NEED GOOD THINGS POSTED ABOUT AMATEUR RADIO FOR A CHANGE!!!!!

Now that I have that out out the way. Could my fellow hams please post some positive things about Amateur Radio? We need lot's and lot's of good things about our wonderful hobby posted here to show the world that we are not just a bunch of negative idiots and in fact, that we are a fraternity that welcomes new Amateur Radio operators with open arms! Here are some of my favorites things about Amateur Radio.

When my car broke down, I called on a local repeater, couldn't reach it so called on another. Someone answered and called my wife for me enabling her to get me out the the middle of nowhere.
A fellow ham that I met via a local repeater invited me to his shack to see how to operate satellites. He had never met me in person.
The many friends I have made because of Amateur Radio.
Having great QSOs with total strangers on various bands.
Meeting every night with a groups of fellow hams that have become friends on 40 meters.

The list goes on and on! Please post your positive things about ham radio so people that are thinking about joining our wonderful hobby will see the good side! Thanks and 73!

Well, Zee in American translates into the English Zed, which is the internationally accepted standard. A lot of folks outside of the United States have no idea what Zee is. In fact when i first moved here, I had a hard time saying Zee instead of Zed.

|Well I would say that they are a majority of hams who have been licensed
|for more than a few years.

This is just as bad as Mr Pelliccio's generalization.

I don't think it's even close to a majority (maybe they generate a
majority of the noise, though) and you haven't got a single survey,
poll, or even a made-up statistic to justify that statement. (Well,
I'll bet you could come up with a made-up statistic.)

And no, I don't have any evidence that you're wrong. But I don't
believe it, and I'll bet the 71% of licensed hams who would rather do
radio than flame about it don't really care one way or the other.

Source record: 282183

I came into this thread late, but I think the original question was, " why is the final stage modulated and is there any...etc"... The one answer I did not see was an explanation of "high level" v.s. "low level" modulation. Plate modulation of the final stage has the advantage of hitting 4X p.e.p. over the plate input. In other words a pair of 6146's running 100W dc input carrier will hit 400W peak envelope power on modulation peaks when the plate voltage is rasied 2X by the plate modulator. All other forms of grid and choke modulation (low level) *for the same carrier input to the same circuit topology* produce some lesser value of peak envelope power. Taylor and Doherty modulation (not the same circuit topology) are capable of producing higher values of p.e.p. during the positive half of the modulation cycle as well and would be considered high level modulation. I knew a fellow who ran several hundred watts of audio on a 50W ARC-5 transmitter in the early 1950s', using Taylor modulation. Now occupied bandwidth...that's a different story!

Source record: 282192

In August of 1992 "73 Amateur Radio Today" described a simple receiver
for forty and eighty meters based around the Signetics TDA7000 chip.
The author claims that changing the coils/capacitors in the VFO will
allow for the reception of thirty meters.

Has anyone done this ? Does anyone have the details on the coil/capacitors
that would be needed for the VFO to work in the thirty meter band ? I
don't have the Signetics data sheets on the TDA7000 and I have no idea
how to calculate the inductance/capacitance that would be needed in this
VFO in order for it to work in the thrity meter band. Anyone??????

>I have a couple questions about the ability to access the Kenwood 732 and
>the new 742 through an HT (Kenwood or otherwise).

Ok, I have the TM742A so I'll try to answer about that. The 732 and 742
both have the same features (except that the 732 can't have a third band).

>1. Do these radios have the ability to be accessed by remote in the first
>place?

Yes, both of them can be controlled by remote.

>2. Does one need a Kenwood HT to do this?

No. ANY transceiver with tones can controll the radio.

>3. Would this be done through DSQ paging codes?

You can turn on DTSS so that the squelch only opens when you enter the
specific 3 digit code, then you can control it. But if you don't turn that on
then ANYONE can control the radio with their tones.

>4. Assuming all this is possible, could you change frequencies plus use other
>radio functions, or just turn the power on and off?

You can do almost ANYTHING from remote. Including turn the volume and
squelch up and down (although why you would want to do this from remote is
beyond me... ;-). Beware though, if you DO change the frequency then you have
to be sure you remember what frequency you changed it to since that will be
the new control frequency.

>The answers to these questions would sure help me out quite a bit. I would
>appreciate any responses. Thanks in advance!
>Andrew

Hope I was of some help. BTW, the cross band repeater function is
an excellent bonus! :-)

A procedural question...

If/when/since the Novice tests are under the VE system now, do the VEs follow the same procedure with Novice tests as they do with the other tests? In other words, is the 610 first routed to the VEC and then from there to the FCC or do the VEs send the 610 to the FCC directly, bypassing the VEC?

>if after, then I will need 2 bridges). Also, how much difference
>will a volt or 2 in the secondary make? I do have access to the
>windings so adjustments are possible.

As another poster noted, it's bad news to directly parallel two
transformers that don't have identical turns ratios. Based on
winding resistances and leakage inductances, it's pretty easy to
calculate the resulting current which will heat the resistance
it flows through.

As an alternative to direct paralleling, or paralleling after
the rectifier, here's an alternative to consider: use a
tapped choke (really an autotransformer) connected between
the secondaries (or even the primaries). The choke has to
handle the current you want to deliver, but it will have
only the difference between the two secondary voltages across
it: you connect one side of the secondaries together (being
sure you have the phase right, and the choke between the
other two leads. Take the output (to the bridge) from the
choke centertap. If the "centertap" is offcenter, then you
can adjust the current sharing between the two transformers.

If you have easy access to the secondaries of the two
transformers and can adjust them to practically identical
voltages, then direct paralleling is a reasonable option.
It may be easier to _add_ turns than to take them away, if
there's any space left between the current winding and the
core. Just use appropriate-gauge insulated hookup wire to
add a turn or two. For finer adjustment, put the turns
in series with the primary; you could either add or
subtract voltage this way.

Just to add my $0.02... The similarity between the normal American pronunciation of Z and C can really cause me problems. I picked up the "zed" from studying French, where it is the normal pronunciation, but it's commonplace - and easily understood. (Yes, I write my Z with a dash through the middle, too...) For some reason, though, even though I say my callsign as "kay five zed cee", I've never gotten into the habit of calling a good friend (who I gave his Novice test a while ago) "kay ay five zed cee kay"...it gets pronounced as "zee" there. Bob does use a zed, though.

>to pay attention.

I can't help you with the Ky area, but...

Though the few $ for the directory isn't an issue with me, I do have a problem with the ARRL directory format. As a result, I've started a spreadsheet database. Specifically, I don't like the geographical classifications the ARRL book uses. Sometimes repeaters will be listed as "Suchandsuch Mt." and sometimes as "Citysuchandsuch". Often I have no idea where the mountain is. And often the city is a tiny town that I don't know. Right now, my database has things like

bigcity:smallercity:mountain

for locations. I hope to add longitude and latitude coordinates and some rough indication of radius of coverage (realizing that it's often not very symmetric). I also have a column for "county" which is useful at least for my home state. Another column has "verified by" for the call of a station that verified that the repeater really exists and uses such-and-such CTCSS tone and ... Anyone have suggestions for other entries? Anyone want a copy of what I have so far (2 meters for Washington and SW BC-Vancouver/Victoria area)?

Also, I find it very nice to be able to sort on location or frequency or ..., instead of being stuck with the fixed format of the book.

Message-ID: <9305041901.AA17674@cmr.ncsl.nist.gov>
Source record: 282190

Quoted from p.28 of the May 3, 1993, issue of Washington Business, a Monday section of the Washington Post:

"..... [House] Subcommittee [on telecommunications and finance] members saw a newly purchased off-the-shelf cellular telephone become a 'scanner' capable of picking up cellular conversations around Capitol Hill.
"It took a technician maybe three minutes to reprogram the phone's codes so it could be used for eavesdropping. 'Every cellular phone is a scanner, and they are completely insecure', Sun Micro's Gage said.
"His example underlined the problems of trying to legislate safeguards in cyberspace. Only last year, the subcommittee originated what became a law that makes illegal the use of scanners to eavesdrop on cellular conversations. Who needs a scanner?"

Fred, K4DII, answered some of my questions:
>the transformer with the highest output voltage will carry the
>load until its I-R drop brings it down to the voltage of the lesser
>winding.

This sounds close to the answer I wanted to hear. In addition, there
is a good book on power supplies by Gottlieb (sp?) which proposes one
solution called master-slave. This has a single error amp driving seperate
pass transistors, the output of each is combined after the transistor.

Speculating again - since a very small, equal resistance in the emitter lead
of the pass transistors tends to equalize the current, perhaps a purposly
unequal resistance (like an extra .1 ohm) could be used to reduce the
load to the smaller transformer.

From: richw@mks.com
Message-ID: <1993May4.205101.4016@mks.com>
Source record: 282198

I recently moved to Canada, and I'll be applying soon for a Canadian ham license (uh, I mean, "licence" :-}).

Assuming I pass the exam (probably not much of a problem), I've been told that I'll be given an opportunity to choose my new Canadian call sign from at least a subset of the unused calls in my area (VE3xxx).

So I'm getting ready by putting together a list of my "preferred" 3-letter combos for my new call.

But I'm aware that certain letters, or groups of letters, can be confusing over the air when using voice. For example, the suffix of my US call (WA6SGA) has constantly been misunderstood as FGA, or even FJA, no matter how carefully I enunciate it.

So, I decided to try putting together a list of the letters that are most easily confused over the air, with a view to avoiding those letters or combinarions in my new call. Here's my list so far:

F / S

G / J (especially GA misunderstood as JA)

I / Y (especially OI/OY, QI/QY, UI/UY, WI/WY)

Would anyone else like to contribute their own "pet peeves" to this list?

Now, I realize this is just the kind of problem we use phonetics for. But since I will have some choice in the matter, I'd prefer to sidestep the problem as much as possible in the first place.

1947. Mobile antenna choice suggestions requested

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-04 22:07:07 UTC
From: peterson@physc1.byu.edu
Message-ID: <1993May4.160711.608@physc1.byu.edu>
Source record: 282212

I am looking for a good mobile antenna for a van. I'm not particularly averse to drilling a hole but I would rather not have the antenna mounted in the center of the roof since that would interfere with hauling things like canoes up there. One thought was to mount one of the 7' colinear antennas (for 2m) on the front fender by the hood.

The real question is how will this mounting point affect the gain and radiation pattern of the antenna? Or is there a better choice of antenna that will have good characteristics mounted down on the corner of the van?

I apologize if this is a FAQ but I haven't been able to find anything in the references I have available that really discusses mobile antennas.

Thanks,

Bryan G. Peterson KB7TEW

The last time I talked to the FCC, they reminded me that it was illegal to transfer third-party information, such as what you heard on the public service frequencies without the permission of the agency. And..It is illegal to use the info. for your personal profit or gain; without their permission. News Media usually have blanket permission and I have not heard of any agency who has hastles any media person. I guess the City of Chicago can revoke their permission or try to inforce teh federal laws. I can't imagine the "secret" police tracking you down for listening at home. Also, many laws exclude "Amateur Radio Operators" from any ban on listening to scanners either at home or in their vehicles. Good luck.

1949. SAREX Mission Update 5/4/93

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-04 22:12:58 UTC
From: abfhb@stdvax.DNET.NASA.GOV
Message-ID: <9305042212.AA17872@east.gsfc.nasa.gov>
Source record: 282031

SB SAREX @ AMSAT $STS-55.025
SAREX Update 5/4 @ 19:00 UTC

The SAREX payload was heard in the Southern portion of the U.S. this morning with a booming packet radio signal. With the SAREX window antenna connector failed, the Shuttle Crew brought the packet TNC and the Motorola 2-Meter Handheld into the German Spacelab module to use the externally mounted SAFEX antenna. This antenna is basically a 1/4 wave whip mounted on the outside of the metal module with an airtight feedthrough. This antenna has performed admirably with a significant s/n boost when compared to the window antenna.

A telebridge contact with the Trummansburg Middle School using WH6IC's (Steve Teegarden) station in Hawaii was successfully completed today. The students experianced a full quieting SAREX contact from horizon-to-horizon. Shuttle Commander Steve Nagel, N5RAW, gave an outstanding signal report "one of the best during the mission" for this contact (which used the external antenna).

It appears that the crew has stowed the packet radio equipment. All future SAREX operations will be on voice using batteries and the SAFEX antenna. It is hoped that the crew will be active over the next few hours with general voice QSOs. SAREX equipment stowage is expected at 20:50 UTC on May 5 with landing set for 13:03 UTC on May 6.

Submitted by Frank H. Bauer, KA3HDO for the SAREX Working Group.

1952. Using a coax sleeve to phase balance a 2M antenna

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-04 22:57:17 UTC
From: wkinning@nyx.cs.du.edu
Message-ID: <1993May4.225717.13411@mnemosyne.cs.du.edu>
Source record: 282205

I am constructing a "super J-pole" antenna similar to the marine version in the ARRL Antenna book, however I want to use a coaxial sleeve for phase reversal instead of the 1/4 wave stub.

Should the coaxial sleeve be open at the top, bottom, or will it work either way (considering the physical location would differ) ? One reference I have seen seems to suggest that the sleeve open on the bottom might act as a choke, but the physical structure would be much simplified by this solution.

From: wayne@hpfcso.FC.HP.COM
Message-ID: <103360178@hpfcso.FC.HP.COM>
Source record: 282082

jchappel@sander.lockheed.com (Joel Chappell) writes in part:

> Plate modulation of the final stage has the advantage of hitting 4X p.e.p.
> over the plate input. In other words a pair of 6146's running 100W dc input
> carrier will hit 400W peak envelope power on modulation peaks when the plate
> voltage is rasied 2X by the plate modulator. All other forms of grid and

Good point. Back in my high-school days (late 1950's) I knew a couple of
fellows who tinkered around with bootleg AM broadcast band transmitters.
Plate modulation gave a much stronger signal (natch), and was less distorted
at high modulation levels than grid modulation.

G E N E R A L A N N O U N C E M E N T :
==========

March - Rally - Prayer Vigil - Letter Signing
for the cause of
Peace in the former Yugoslavia

Join the Champaign-Urbana community in a non-politically-aligned march, rally, and ecumenical prayer vigil for the cause of peace in the former Yugoslavia. Citizens in this central Illinois prairie community will gather at a giant rally Saturday May 8 to sign a letter to the leaders of Serbia to end war and genocide and commit themselves fully to a working peace in the former Yugoslavia.

The letter, to be signed at a grassroots rally and march, will be delivered personally to President Slobodan Milosevic and Radovan Karadzic, the leader of the Bosnian Serb forces.

Champaign-Urbana is the home of the University of Illinois. Rally leader Jean Stoia said she expects a large turnout of both town and gown. ``We're tired of seeing bloody children on television,'' Stoia said. ``Even if a peace arrangement is agreed to, we think Yugoslavia's leaders need to have their feet held to the fire to stick to the deal.''

The march, which begins at 1 pm (CDT), is being planned as a non-political event. Leaders stress that the demonstration is not aimed at recommending specific solutions or actions in Bosnia. Its point is to demonstrate that American citizens want to take a stand against the killing, the repeated violations of ceasefire agreements, and the genocide of ethnic cleansing.

``Two world wars started because citizens were complacent about similar events in Europe,'' Stoia said. ``They paid no attention to the concentration camps either, and we got the Holocaust. It's time to start learning from history. If not now, when?''

The rally events will include a march through the city to a rally in a major park and church. The event will include music by local musicians, and speakers representing concerned ethnic and religious groups.

WHEN: 1 pm, Saturday, May 8, 1993, rain or shine (bring an umbrella just in case).

WHERE: Scott Park, corner of Second St. and Springfield Ave. in Champaign, Illinois (near Burnham City Hospital). Parking will

be available in the Burnham Hospital parking lot. If you're coming from out of town, you can take I-74 to Neil Street; exit southbound and proceed to Springfield Avenue; turn left onto Springfield and go a couple of blocks until you see the park. The demonstration will begin at the southwest corner of the park (Second and Healey).

WHO: The Champaign-Urbana Coalition for Sanity in Bosnia, a grassroots group of concerned citizens -- townspeople, students, children from many area schools, and anyone else who cares enough about this issue to take a stand.

FOR MORE INFO,
CONTACT: Jean Stoia, (217) 367-3537

1956. Call for opinions: 9913 vs. CQ-FLEXI

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-04 23:53:38 UTC
From: slp9m@cc.usu.edu
Message-ID: <1993May4.175338.67212@cc.usu.edu>
Source record: 282210

There's no "right" answer to this question, but I'd like to hear some experience-based opinions.

According to my sources (ARRL Antenna book for 9913, Certified Communications propaganda sheet for CQ-FLEXI) both Belden 9913 and Certified Quality 9913 equivalent have the same attenuation at 50 MHz. (I need a run for HF. I haven't looked at the slope of the FLEXI curve to see if it matches that of 9913. 50 MHz seemed a good common data point for my applicaion.) I conclude that as far as attenuation is concerned, there is no advantage to using CQ-FLEXI. From what I've found out so far, the best price I can get on CQ-FLEXI is about $0.14/ft more than the best price I can get on genuine Belden 9913. So, now the question for the experienced - is the extra 14 cents per foot worth the added flexibility (and any other advantage the Certified Quality product may hold over Belden)?

Message-ID: <1993May5.001830.24885@cs.yale.edu>
Source record: 282211

I am considering putting up a substantial tower system (70-90 ft crankup), but at this stage in life money is more available than personal horsepower. We also worry about liability insurance when we get the traditional group of buddies together in exchange for beer.

I wonder if anyone has tried to contract with communications service folk (or other contractor types) for this kind of project? What are the pros & cons?

The QTH is Guilford CT, near New Haven, if anyone has local suggestions.

73 & thanks! (e-mail replies appreciated to address below.)

Source record: 282014

Hi there,
I'm a novice operator in VK, planning a trip to Canada soon.

I'd like some info on reciprocal license agreements b/n Australia
& Canada.

I've spoken to quite a few guys from other countries, using VK calls while out here on holiday and all of them have said how great it was to use ham radio to help them get around & see the sights etc. I'm hoping to do the same when over there.

I'd like to use 2 Metres if possible, as an HT & magnetic base antenna doesn't take up much room or weigh much. Would this band be possible for a novice ? FM phone mode of course, no packet,SSB or anything.
If anyone has any info on this subject or numbers to call (fax preferably, due to time differences) for radio clubs etc I'd be grateful.

A list of repeater freq's would be good too !

Hope I can get this together !
Cheers
Andrew VK3 MDZ

Subject: Icom IC229H - Questions
To: info-hams@ucsd.edu

I have ordered an Icom IC229H 2-meter mobile transceiver. Does anyone have any opinions or experience with this radio that they would like to share ? Are there any mods ? Does anyone have them ? How do I get them ? Please Email or post to this front; whichever way you see fit.

Tim Wright -=- KD4ZOO

So People don't think that there is just one Tim Wright with two calls I also have the Icom 229 H 2 meter mobile transceiver. Talk abouut coincidences <sp> The same name same radio......

Tim, KD4ZOO

I have had my IC229H for almost a year now and I am very pleased with it. It is very easy to program and to set up for the SAREX missions. I use mine not only for mobile use but it is mainly being used as a 5 to 50 watt base. I use an 11 element beam up about 25 feet and I have no problem talking to Cincinnatti <sp> Ohio or Lexington, Ky. from Morehead, Ky. Now I am thinking about getting a ICOM Dual bander to talk on and devote the IC229H to packet.

Its a great little radio for the money and I would like to thank my Amateur Radio supplier: R&L Electronics for being there when I decided to purchase this rig. My next rig will be purchased at R&L.

As to Mods if you have any or receive any PLEASE let me know.

Well enough

I'm KJ5GU and I agree with Tony! (anti no-code license)

It's not so much the "no-code technicians" that I don't like....It's
just the people that B&M and whine for ALL the privs with NONE of the effort.
The HF bands are already crowded enough....the code requirement needs
to stay...I mean ...the technicians already have access to 50MHz and up! And
they can TALK there too.....and if they don't care to work to upgrade, they can
Stay there as far as I'm concerned.
(Whine, whine, whine...blah, blah, blah..."...I want access to ALL the
bands with NO code requirement!"...)

Btw...I achieved extra class at the ripe old age of 20! Almost exactly
2 years after my Novice!

And, the frequency allocations are not so pleasant for the hobbyist
(non-ham) either: the "holes" between 10khz steps in the CB band plan
is one MAJOR source of remote control frequencies, and the others are
in part 15 ranges -- like 49 Mhz...

Nope, that is not a stupid question. In fact, the way you ask, it is a
good one...

As you have probably noticed, the use of phonetics in voice
facilitates understanding, especially when letters with similar sound
when pronounced are spoken: B, C, D, E, G, P, T, V, Z... In "normal"
conversation, rather than slip into phonetics ("CHARLEY CHARLEY ZULU")
C C ZED works pretty well. The "zed" is the French pronounciation of
the letter "Z" (they say zed all the time when they encounter a "z(ed)"
And, that is worldwide, not just California.

And, welcome to hamdom. Glad you got to the exam and joined us...

From: easu348@orion.oac.uci.edu
Message-ID: <easu348.736570081@orion.oac.uci.edu>
Source record: 282216

It seems I've been having a lot of questions about the 741/742 lately, so here's another: I have a Kenwood 741 that has been modified to receive out of band frequencies. But, I have noticed that the receive ability of the radio out of band is terrible (understatement). I have tried many tests (such as a different antanae, plugging my radio into other people's coax and antanaes, and nothing I do seems to cure this problem. When comparing the receive (out of band) on my radio to another person's receive (out of band) on their radio, mine simply is awful. Is there a problem with my radio? Do all 741s do this? If ther is a problem, how do I go about fixing it? Thanks to all who have helped me with my previous problems. This is no exception. Thanks again!

LC circuits scale nicely with frequency. To move from 40 to 30 meters,
scale the inductance and capacitance by sqrt(30/40).

>BEFORE the no-code's inception.

I received my Novice ticket a couple of months before the "no-code"
went into effect.

>You might be surprised that it is not a
>majority of those hams who favored the no-code license.

I didn't approve, and neither did my elmers. I even kept my Novice
call sign when I upgraded to Technician (+) so that the people around on the
repeater that I didn't know wouldn't think I was a "no-code".....(There were
VERY many where I lived that disapproved of "no-code"...)
Btw...I got my Novice at 18.....I upgraded to Extra at 20.

>ARRL is too afraid to ever conduct such a poll. Maybe GALLUP would
><grin>.

Got that right....ARRL doesn't stand for anything in Amateur Radio
that I approve of. If they want my $$$ then they'll hafta change their
attitude and since they probably couldn't care less, then I won't become a
member.
Also, I can't stand Fred Maia (W5YI). He's completely Clueless.
But that's another story...;-)

I just got the manual addendum from Kenwood today. Maybe I can answer
a few of these questions. I can only speak about the 942/742. I don't know
about the 732.

> 1. Do these radios have the ability to be accessed by remote in the first
> place?
Yes.
>
> 2. Does one need a Kenwood HT to do this?
No. Any radio capable of DMTF tones will work.
>
> 3. Would this be done through DSQ paging codes?
Sort of. A DTMF code is programmed into the radio to access the remote
command functions. That code must be send to put the radio into command mode.

>
> 4. Assuming all this is possible, could you change frequencies plus use other
> radio functions, or just turn the power on and off?

Here is a list of available functions:
Call Channel On/Off
CTCSS On/Off/Select
Direct Frequency Entry in VFO Mode
Memory Mode On/Off/Select
TX Power H/M/L
Frequency Up/Down
VFO Mode
Cross Band Repeat On/Off

As I don't yet have a 742 (supposed to be delivered Wednesday) I have not
been able to experiment with it. Call Kenwood at 310-639-7140 and
ask for the Manual Addendum for the 742 for Remote Control by DTMF tones.

BTW, it is illegal according to Part 97 to transmit control tones on 2 meters.
All controlling must be done on 220 or above.

In Great Britain, Canada, Australia, etc., etc., the last letter of the alphabet is called "zed" rather than "zee". ("Zed" or "Zet" is derived ultimately from Greek "zeta," which is the name that the Romans kept when they borrowed Z into the Latin alphabet.)

Two hundred years ago, the letter Z went by a variety of names, including zed, zee, and izzard.

> Licence received: May 3

My license update was issued the same day.
Mailed 610: March 31
License issued: April 27
License received: May 4

It took only 5 weeks, but it didn't have to go thru the VEC either since
it was just an address change.

And in answer to a question I asked a while back but never got a authoritative
answer to, the latest QST confirms that the FCC no longer enters station
location into their database, it will not be on form 610 any more, and you
don't need to send in a form 610 when the only change is your station location.

: > Hello,worldwide,
: > I just start operating a semi-professional magnetic Loop-Antenna (AMA-6).
: > (Freq : 6.9 - 25 Mc / Diameter : 80cm). Anyone with experience in
: > such antennas?

: I have built a 90cm loop antenna as an afternoon project, using 2mm
: wire + a capacitor with 2mm spacing. It tunes 12-30MHz. At the floor
: level, it works as well as the attic dipole on 18MHz, or better when
: conditions are ending. The wire is getting slightly worm on 14MHz but
: stays coll at 18MHz and up. I have heard that the losses of the loop
: increase as the 4th power of the frequency. Consequently, to cover
: next 30% lower frequency one needs 2-3 times thicker wire (or tube).
: Consequently, building a loop antenna with a 90cm diameter and 18 MHz
: lowest frequency is trivial, it is somewhat more complicated at 14MHz,
: and becomes a challenge at 10MHz.

Im wondering, Todd, what exactly is the deal with the "nuts2u::little"?
Is that an alias you use? Been following your posts about this no-code thing,
and personally, you seem to have some good thoughts, but watch the name calling
and stuff. Remember that it is just a hobby, and the F.C.C. will have the final
say when it all comes down! Besides, isnt "nuts2u::little" a wee bit obnoxious?

Well I've been licensed since 1963, Novice then General, that's before the Incentive Licensing crap. Now I hold an Advanced. So I know code, but I lobbied for, and continue to support, the no code license, as did the QCWA, made up *solely* of people licensed before no code, TAPR, AMSAT, and other progressive organizations. I believe it's been a huge success and has breathed new life into a moribund service. "Incentive" licensing nearly killed American amateur radio, and continues to this day to impose a nonsensical requirement to demonstrate high speed Morse manual skills in order to get access to additional *voice* frequencies at HF. That didn't make any sense in 1968, and it still doesn't today.

>product may hold over Belden)?
>

Wrong question. The question you should be asking is: "is 9913 worth
the extra N-cents per foot for an HF application?" The generally
accepted answer to that is "no."

9913 has a number of problems -- it's big, it's inflexible, its air
dielectroc is subject to moisture problems. The list goes on.

Source record: 282088

I have just gotten my licence. Since im limited to 2 meters and 70 cm
i'd like to try to work some satellite QSO:s. But there is one problem.
I can track the sattelites and i hear them when they pass over me, but
i have not got any idea about which frequencies and which mode to use.
All the information i can get my hand on says that its mode B, S, LS
or JL or something more or less cryptic. My guess is that these modes
describes both up frequencies , down frequencies and traffic mode (SSB,CW etc)
but how do i interpret them?

And if someone has a description of the different sattelites (up down freq etc)
it would be most helpful to get me started.

Thanks

I've had a few requests for details on that book by Bierce, so it's worth posting

THE DEVIL'S DICTIONARY by AMBROSE BIERCE

published by Dover publications inc.
180 Varick street
New York
N.Y. 10014

Standard book number 486-20487-1
Library of congress cat card number 62-8606

Here's a few quotes to whet the appetite:

Ambition - The death of endeavour and the birth of disgust

Egoist - A person of low taste, more interested in himself than me

Pray - To ask that the laws of the universe be annulled in behalf of a single petitioner confessedly unworthy.

and another Churchill/ lady Astor one:

Lady Astor: If you were my husband, I would poison your food.

Churchill : And if you were my wife, madam, I would eat it !

(from memory so not verbatim)

I'm looking forwards to seeing much more effectively wounding insults on the net

Glad to be able to help a bit

Try to get the enlarged DD. It seems that Bierce mislaid some of the pieces, over the years, the full one was reconstructed perhaps 10 years ago. There are other books of sample, non obscene, invective. They make instructive reading.

Referring to something/sombody as a load of old cobblers, or as codswallop, or.... The fine art of invective was much damaged by the "free speech" movement.

> Here's a few quotes to whet the appetite:

Most apropos, electricity being young, and radio not existing yet:

Electricity, n. a mysterious substance capable of lighting a house better than a horse, and propelling a streetcar better than a gas jet.

You haven't really given enough information to make cable selection possible.

Coaxial cables have losses which are fairly low, and then at some frequency, start increasing (accelerating curve) with increasing frequency. On HF, there is not a lot to choose between cables on losses. Even RG58 is not so bad, if runs are short.

If the run is very long, then small differences per metre can become worthy of consideration and things like Heliax and hardline with appropriate things at their ends and lengths of flexible stuff to go around rotators should also be considered. If loss is important, open wire line is hard to beat, but may not be as convenient as you might wish.

It looks like your cable choice has to be made on non-electrical aspects. What bend radius does it need to handle? Does part of it need to flex repeatedly around a rotator? How about the life expectancy of the outer jacket due to UV exposure? What about water ingress through the outer jacket? Most of this will not be covered in data sheets, at least not in ways that allow you to compare different brands. Some cables are so recent that no-one has got any long term experience to give any idea of life expectancy. Very flexible cheap cable often has a PVC outer jacket containing a lot of plasticiser, which leaches out and attacks the braid, leading to increased loss with age. The sorts of outer best suited to resist UV exposure are stiffer too. There are good reasons to expect longer life from the stiffer cable, unless repetitive flexing kills it.

I have measured a wide variety of cables from HF to microwave, and designed flatness equalisers to correct the cable's roll-off for precision measurement purposes. I have always found manufacturer's attenuation data to be reasonably trustworthy, where the manufacturer has a known name. Some of the junk stuff from far Eastern sources, sold as low cost RG58 or RG223 bears no resemblance to the real thing.

Unless the run is very short, I'd use the 9913, with a replacable section of more flexible stuff, if needed to allow rotation.

I doubt that you will find anyone with long term experience of new-ish cables, and the factors most likely to influence your choice won't be printed ! You may be limited to extrapolations based on older cable designs.

Hope this helps a bit.

1990. Re: What is circular polarization?

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-05 13:36:13 UTC
From: wejones@cbda7.apgea.army.mil
Message-ID: <9305050936.aa24931@cbda7.apgea.army.mil>
Source record: 282029

Related to the question of what is circular polarization is a question
that I have seen both answers suggested as being correct, ie:
Does the wave-front polarity actually rotate as it travels through space,
or is it just that the polarity at the source rotates with time (and the
polarity at any distant point in space), but any individual wave-front
actually retains its polarity as it travels through space?
Intuitively, it would seem that the latter of the two descriptions is
correct, but there is a fairly strong consensus that the former is
correct, at least in some areas science. I see this as one of the many
situations where a mathematical description of the phenomenon is easier
if a rotating wave is assumed, and even though it doesn't make sense, it
has been adopted by theoreticians. My exposure to this subject has been
through areas of science other than electronics, and I am interested in
whether the electronics community looks at this the same way or not. I
am not sure how, experimentally, to distinguish between the two sensors
other than perhaps to have two detectors with multiple polarity sensors
that are capable of detecting the polarity at the start of a pulse, ie have
a way of detecting which polarity is sensed first as a pulse arrives. If the
two detectors (at different distances) detect the initial edge of the pulse
at different polarities, the wave-front must be rotating. Has this sort
of experiment been done? Any comments? Thanks in advance. 73 BJ

1991. Mobile Flourecent Interference!

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-05 13:40:19 UTC
From: jwa@tellabs.com
Message-ID: <1993May5.134019.28863@tellab5.tellabs.com>
Source record: 282141

The other night I was at an intersection waiting for a the light to change. I noticed a great deal of interferance on my 2 meter rig and scanner. As the light changed the car next to me peeled out and, to my surprised, the street was lit up with bright blue flourecent lights. The interference, aparently, was caused by a switching supplies that ran the lights.

Whats with the lights? Is this a new fad straight out of Deetroit? Are the "Low Riders" traiding in their hydrolics for light show equipment? Am I square?

I guess I'll have to tape a flourecent tube to my low band Hustler and operate some mobile VHF at night.

: Folks,

: Is anyone reading who this doing spread spectrum work in the Ham bands? If so, how
: about posting a note or two about what is happening with SS?

I'm hammering away at it and may yet get what I'm doing written up in
time for submission to the next ARRL Networking Conference.

In a nutshell, I'm trying to come up with a extremely low cost
(producible) design for a 1200 MHz, direct conversion, direct sequence
transceiver.
I'm using I/Q modulation and a fully synchronous design such that all
carriers, clocks and chips are related. The two ends of a link lock on
each other by way of a pilot tone. Although I'm trying to support ~250
kbps data, the scheme is general enough that SSB, AM or any other mode
(OK, ATV might be a bit much bandwidth) may be supported. The spreading
is being included not as a means for channel sharing as much as for
multipath rejection.
Once acquisition of the SS signal and lock on the pilot is achieved
everything stays put. I'm planning on using software rather than
hardware to handle gain and power control as well as the SS acquisition.
This reduces the parts count a lot. Because it is direct conversion,
the bulk of the high frequency components are printed on PC board and
there is very little to adjust. Most of the mod/demod can therefore go
on at baseband with opamps and conventional digital logic.

I think AMRAD has a few people pursuing things and I know of an
individual or two playing around but beyond that I can't tell you what
is happening.

1996. HyperCard HamStacks available on ftp now

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-05 15:29:20 UTC
From: dls@genrad.com
Message-ID: <1s8mggINN473@sweetpea.genrad.com>
Source record: 282104

I don't remember if I already posted this....so just in case I didn't, here it is. Note that the stacks are now available via ftp.

Diana

LATEST VERSIONS: Novice v4.1, Technician v4.0, General v2.4, Advanced v2.4, Extra v2.4 now available on ftp

This is another announcement about the MacIntosh HamStacks which I have created. If you are not interested, press 'n' now.

I have created five HyperCard stacks to help people practice for the written Amateur Radio tests. There is one stack for each of Novice, Technician, General, Advanced and Extra questions. Each stack is an interactive multiple-choice test, created from the entire question pool for that class of license. The test is randomly generated, using the algorithms provided for each of the tests from ARRL, so this is a real-live simulation of the tests you will get in front of a VE. There are some print capabilities (you can print a test with a separate answer key, but it's slow. you can also print your results of how well you did, along with the accompanying correct answer key) and at the end of each test, it will tell you how well you did, allow you to review the missed questions, and allow you to take another randomly generated test. If you can consistently score over 90 on the tests, it's almost a sure guarantee that you will be able to take and pass the VE proctored test.

Note that these stacks will only work on a MacIntosh computer. HyperCard version 1.2 or later is required; they were generated with HyperCard version 1.2. Because HyperCard data is NOT stored in any ASCII form, there is no way that this data can be used on other computers, including IBM PCs, so please don't ask for the impossible. Also, I do NOT have access to email these stacks over the computerwaves, nor do I have ftp capability. There are ftp sites which (will?) are supporting these stacks via ftp, as follows:

These stacks are supported by ftp by Charley Kline, cvk@uiuc.edu. To access the files, type "ftp uxc.cso.uiuc.edu", log in as "anonymous", with your email address as the password. Type "binary" at the prompt, then type "cd pub/ham-radio". The five hamstacks are (eg): Novice_Ham_Stack_v4.1.hqx, Technician_Ham_Stack_v4.0.hqx, General_Ham_Stack_v2.4.hqx, Advanced_Ham_Stack_v2.4.hqx, Extra_Ham_Stack_v2.4.hqx (or similar names). To retrieve one of the files, (for example, the Novice one), type "get Novice_Ham_Stack_V4.1.hqx". When you're finished retrieving all the files you want, type "quit" to exit ftp. You need to use Kermit to transfer the files to the Macintosh. The files must then be un-binhexed by UnStuffit.

The latest versions of the stacks are shown below, and are compressed with Stuffit Classic. UnStuffit is included on the diskette, and a copy of Morse Tutor is also on the diskette. The Novice and Technician ham stacks have the questions which will be valid as of July 1, 1993. Other stacks include my new name and address.
Novice version 4.1
Technician version 4.0
General version 2.4
Advanced version 2.4
Extra version 2.4

If you wish to receive these PUBLIC DOMAIN stacks from me, please send me a SASE (self addressed STAMPED envelope - 2 ounces postage = .52) and 800K diskette. I will no longer send out the stacks unless the envelope has sufficient postage for return mail (in general, that means .52-.98, depending on size of envelope) and for those who send a standard business envelope, I take no responsibility for the condition of the diskette through USnail.

Thank you for your attention.

> my previous problems. This is no exception. Thanks again!
> Andy

Andy,
I tried a 741 also and experienced the same problem, especially on
the UHF out-of-band receive. I like to listen to several of the frequencies
in the 450-460 range, and my old Alico 570T did a wonderful job of this,
however it was limited to only 10 channels. My old Kenwood 721A also did
a great job, but I usually used it as a base station radio.
Apparently, when tuned out-of-band, the 731A bypasses the tuned front
end, and feeds the signal into the first mixer. This obviously will cause
a marked problem in selectivity. Also, there is a problem with the pre-amp
section on the UHF 731A receiver, such that, when tuned out-of-band, the
pre-amp is bypassed, and may go into oscilltion.
The 742A is somewhat better on out-of-band receive, but it is still
not perfect. My old Alinco still is better. Especially on VHF ouf-of-band
where the Kenwood is much less sensitive compared to the Alinco.
Of course, none of the specs on ham equipment are guaranteed outsid
the hambands, but it's too bad that Kenwood's older decent 721 receivers
couldn't have been used in the newer models.

73,
Kirk

1998. Notebook PCs for Radio Use

Newsgroup: rec.radio.amateur.misc

>Thanks and 73,

I can't say what anyone else is doing. Nobody in any of the amateur
radio clubs that I am a member of is touching the stuff. Had to start
my own work to learn anything.

I'm currently working (when I can find the time) on my own spread-spectrum
project in the 900 MHz band. I plan on doing it all: rf hardware, AtoD, DtoA
and software. All from scratch. I have the block diagrams done. Am selecting
components and starting on software and digital hardware. Of course, it
will only be compatible with another system designed by me.

The intent here is NOT to "hide" or "encrypt" the transmission. That's just
how spread spectrum works.

BTW, I'm a NO CODE TECH, and proud of it!

I'd rather do something that will BOTH enhance my knowledge of amateur radio
and also be useful in today's job market. Learning CW will not provide both.
I guess I could design a cherry-wood base for my key and enhance my
wood-working skills. ;-) Any OTHER "cutting-edge" work going on out
there in CW land?? ;-)) Just doing my part to fan the flames of the
no-code bashers. ;-)))

I used to always use Belden 8214 for HF. But I am sure it has its problems too.

I haven't decided yet what to use on my new tower going up this summer. I was thinking of using 9913 for the VHF/UHF antennas and since the cost difference is not all that much compared to 8214, even using it for HF (20-15-10). But after hearing about all the water problems I am not so sure now.

>done that, and now I simply see duplication.

Nope, rec.radio.info was created to make a cross-posting target,
allowing killing and/or filtering/selection of the FAQ's, much like
rec.music.info or news.answers. Consult "Welcome to rec.radio.info!"
for more information.

>The only argument I can possibly imagine for continuing to post such items
>here is that "not all sites get .info". I suspect that this would apply to

>sure like to know why. If they're worried about disc space, they're sure not
>seeing any real difference as long as all of .info winds up here anyway!

Say you're a net-novice looking for the Ham Radio FAQ, or the charters
of the rec.radio.amateur newsgroups. Wouldn't it be appropriate to place
them in a rec.radio.amateur.* newsgroup for visibility? Rec.radio.info
is a meta-group to facilitate filtering and archiving of FAQ's and
bulletins from several heirarchies, including amateur, shortwave, and
broadcasting, not to steal information and segregate it into a new
newsgroup, against the will of the readership of the discussion forums.

The transport mechanism of netnews only propogates one copy of a
properly cross-posted article, and most news storage mechanisms (save
for a few, mostly IBM-PC-based, news packages) store only one copy of
that file with pointers to all cross-posted newsgroups. So disk-space
requirements are the same in most cases.

Most major newsreaders (tin, rn, xrn, nn, anunews) will present
a cross-posted article only once, in the first newsgroup on the
cross-posting line that you read, making cross-posting transparent.

So in short, it provides kill/select filtering capability, facilitates
archiving (and easy filtering for discussion mailing list gateways),
provides visibility for information in its natural "home" newsgroup,
and on most news servers and readers cross-posting is transparent and
does not take up additional disk space.

I'm surprised that there is still confusion over this issue,
particularly among those who have been on the net a while.

2008. Advice to no-code debaters

Newsgroup: rec.radio.amateur.misc
Date: 1993-05-05 17:48:11 UTC
From: randall@informix.com
Message-ID: <randall.736624091@woof>
Source record: 282135
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Here is some advice to those who continue to participate in the
no-code debate:

1) Please use rec.radio.amateur.policy, not .misc. The .policy
group was created specifically because the no-code debate
was cluttering the old rec.ham-radio group too much.

2) You have no new arguments. The no-code debate has been
flaming on for years. All arguments for or against have
been made many times. There are no new arguments, twists,
or angles. Give up. By continuing the debate, you will
just get flamed.

3) Some people feel religious about CW. They consider the
no-code license to be a sign of the decline of western
civilization. You will never convince them otherwise.

4) Some people feel religious about anti-CW. They think
CW stops all progress of civilization. You will never convince
them otherwise.

5) If you really oppose the no-code ticket, then the best
thing to do is to positively convice no-code hams to learn
code and upgrade. Thousands of no-code hams have done so.
There are many reasons to use CW, and the best thing you can
do is to show other hams what they are.

6) If you don't like CW, then don't use it. Let other hams
who like it use it, and you can use other modes.

inquiring minds wanna know. the DX Callbook must be one heck of job to get together. think about it people. how do they get all the data from the licensing organizations of all those countries? how do they get them all to agree on the format? do you force them all to MSDOS machines?

something to think about. can you spell cooperation? i knew you could. can you get it even if you can spell it?

ciao,

Has anyone every heard anyone call:

QRZee

rather than

QRZed

?

I never have, but perhaps I lead a sheltered life?

I note the ARRL operating manual spells it out (in the same way).

After much deliberation, I think I've finally narrowed down my
choices for a new dual-band HT. The most important features
are 2m/70cm and 800 Mhz receive.

I am told the '530 is modifiable to receive 800 Mhz, true ?

I am also interested in using the radio in the business band
around 464 Mhz. Does anyone know of the useable transmit frequency
range after modification ?

Opinions on this unit are most welcome!

I've been using a lot of 9913 for both VHF and HF work. Basically the stuff is pretty cheap in bulk... I have not had any water problems, but then I use type N connectors which include rubber seals, etc. The type N's are not a perfect solution on their own: you still need to do proper weatherproofing of the connectors.

I would prefer it if 9913 had a non-contaminating jacket. I do have some of the stuff buried and expect to have to replace it eventually.

The best things about 9913 are its relatively low loss and its high velocity factor. 9913 should be very usable as thick ethernet, provided you don't want to tap it... Not too many coax flavors have a .84 or better velocity.

>antennas (for 2m) on the front fender by the hood.

May I suggest a J-pole antenna on top of a pole that is mounted on the
rear bumper. The J-pole should be positioned so that the top 39
inches or so clears the roof of the van. This would give you an
omni-directional pattern with the gain of a vertical dipole in free
space.

The mechanical details are left as an exercise for the student. :-)
But a few hints may be in order. I have found that small,
bumper-mount trailer hitches make excellent foundations for antennas.
You will want to make the 39-inch section that peeks up above the roof
very flexible.

The problem with the 7' co-linear job is that a lot of the radiation
comes from the first section, the part made up of the mobile mount,
the spring, the support rod and surrounding car body. If this part is
shielded by the van body, the pattern will be distorted.

Having said that, mounting it on the front fender as you propose would
probably give satisfactory results.
